

THE UNITED REPUBLIC OF TANZANIA

Basic Demographic and Socio-Economic Profile

TANZANIA MAINLAND

VOLUME 4B

Citation:

The United Republic of Tanzania (URT), Ministry of Finance, Tanzania National Bureau of Statistics and President's Office - Finance and Planning, Office of the Chief Government Statistician, Zanzibar. The 2022 Population and Housing Census: Basic Demographic and Socio-Economic Profile; Tanzania Mainland, April 2024.

Note:

Maps and land area used in this publication are derived from the 2022 Population and Housing Census (PHC) cartographic work; therefore, they are for statistical use only.

Foreword

The 2022 Population and Housing Census (PHC) for the United Republic of Tanzania had its reference as the midnight of the 22nd/23rd August 2022. This was the Sixth and the first digital Census after the Union of Tanganyika and Zanzibar in 1964. Other

post union censuses were carried out in 1967, 1978, 1988, 2002 and 2012. The Sixth Phase Government of Tanzania under the leadership of Her Excellence Dr. Samia Suluhu Hassan, and the Eighth Phase Government of Zanzibar under the leadership of Dr. Hussein Ali Mwinyi, like the previous phases, have fulfilled their obligation of conducting the 2022 PHC according to the United Nations Principles and Recommendations for the Population and Housing Census. **We owe them much appreciation for their commitment and support during Census implementation.**

The 2022 PHC was conducted in accordance with the Statistics Act Cap 351, which mandates the Government of the United Republic of Tanzania to conduct Population and Housing Census every ten years. It also followed the United Nations Principles and Recommendations for conducting the 2020 Round of Population and Housing Census, including adoption of advanced Information and Communication Technology (ICT) at all stages of Census implementation. Indeed, the country's decision to use more advanced technology to capture data during cartographic mapping, enumeration, data transmission and processing made the 2022 PHC the first ever digital census to be conducted in Tanzania.

The 2022 PHC results are for integrated plans and sustainable development of the country and will increase awareness and transparency in allocation of resources at all levels of administration based on the actual population. The results will be used by the Government and stakeholders in monitoring and evaluating various national, regional and international development frameworks including the Tanzania Development Vision 2025 and Zanzibar Development Vision 2050; the Third National Five-Year Development Plan 2021/22 - 2025/26 and Zanzibar Development Plan 2021/22 - 2025/26; the East African Community Vision 2050; Southern and African Development Community Vision 2050 and the African Development Agenda 2063.

Furthermore, the results will enable the country to evaluate the progress of implementation of Sustainable Development Goals (United Nation Agenda 2030) that aim at achieving equality and eradicating poverty of all kinds including extreme poverty by 2030 by ensuring no one is left behind. The census data will also provide a basis for the computation of several indicators such as enrolment and literacy rates, infant and maternal mortality rates, unemployment rate and others.

The Tanzania Mainland Basic Demographic and Socio-Economic Profile is the fourth in a series of major planned publications for the 2022 PHC. The major reports that have been produced so far are Administrative Units Population Distribution Reports and Age and Sex Reports. The main purpose of this report is to provide a short descriptive analysis and related tables on main thematic areas covered in the 2022 Population and Housing Census. Areas covered include population and household characteristics, social and economic activities. Other reports in the series of planned Census publications include Regional Demographic Socio-Economic Profiles and Thematic Reports.

The success of 2022 PHC depended on the cooperation and contributions from the Government, specifically Census Committees from national to the lowest administrative level. These include the National Central Census Committee; National Census Advisory Committee; National Census Technical Committee; Census Committees at regional, district, wards, village/mtaa and hamlet. There were also forums from Non-States Actors including Collaborators Forum, Private Sector, various institutions and the public at large.

A word of thanks goes to Government leaders at all levels, particularly, Minister for Finance ; Minister of State - President's Office, Finance and Planning, Zanzibar; Members of Parliament; Members of the House of Representatives; Councillors/Shehas; Regional and District Census Committees chaired by Regional and District Commissioners of respective areas; Census Coordinators (National and Zanzibar); Regional and District Census Coordinators; Supervisors; Enumerators; Local leaders and all respondents (heads of households, members of households and other individuals).

Special gratitude is extended to the following Development Partners:- United Nations Population Fund (UNFPA); World Bank (WB); United Nations Children's Fund (UNICEF); UN-Women; International Organization for Migration (IOM); United States Agency for International Development (USAID); Foreign, Commonwealth and Development Office (FCDO); United States Census Bureau (USCB), The Republic of South Korea, The People's

Republic of China and other Development Partners for providing equipment, expertise, training and financial support in making the 2022 Population and Housing Census a success. We also thank religious, traditional and political leaders, non-governmental organization leaders, the media and all citizens and non-citizens in general for their participation and contributions in the successful implementation of the Census.

Special thanks also go to Honourable Anne Semamba Makinda - Census Commissar for Tanzania Mainland and Former Speaker of the National Assembly; and Honourable Ambassador Mohamed Haji Hamza - Census Commissar for Tanzania Zanzibar, for their effective leadership and management in educating and sensitizing all citizens and non-citizens to participate in the 2022 Population and Housing Census thus, resulting in enhanced quality, smooth and timely execution of the Census exercise. We also thank the Chairperson of the Governing Board of the National Bureau of Statistics (NBS), Dr. Amina Msengwa and the Chairperson of the Statistics Board of Zanzibar, Ambassador Amina Salum Ali, for their guidance throughout the implementation of the Census exercise.

Last but not least, we acknowledge the unprecedented efforts and commitment of the management and staff of the National Bureau of Statistics under the leadership of Dr. Albina Chuwa, the Statistician General; and staff of the Office of the Chief Government Statistician, Zanzibar under the leadership of Mr. Salum Kassim Ali; Chief Government Statistician; staff from the Ministry of Lands, Housing and Human Settlements Development; Ministry of Information, Communication and Information Technology; as well as other Government officials who worked tirelessly in ensuring that the 2022 Population and Housing Census was implemented successfully.

Kassim Majaliwa Majaliwa (MP)
Prime Minister of
The United Republic of Tanzania

Hemed Suleiman Abdulla (MRC)
Second Vice President of Zanzibar

Acknowledgement

The National Bureau of Statistics and Office of the Chief Government Statistician, Zanzibar conducted the 2022 PHC to provide necessary information for policy implementation, planning, monitoring and evaluation of development processes. The Census collected detailed information on demographic characteristics, disabilities, migration, possession of national documents and orphanhood, education, economic activities, land ownership and information related to ICT ownership and use, fertility, mortality, housing ownership and assets, agriculture, community facilities and buildings. Some information on physical addresses was also collected.

This report presents basic demographic socio-economic indicators from national to regional level. The report will facilitate users of Census data to make evidence-based decisions for social and economic development. We therefore express our appreciation to all experts who have put their time and efforts to produce this report. In particular we would like to thank Ruth Davison Minja, the Director of Population Census and Social Statistics; Fahima Mohamed Issa, Director of Social Statistics, Census and Survey, (OCGS); Seif Ahmad Kuchengo, the National Census Coordinator; Abdul-majid Jecha Ramadhan, the Tanzania Zanzibar Census Coordinator, National Census Technical Team, Statisticians, Demographers, Information Technology and Geographic Information System officers for their commitment which led to successful completion of this report.

Our appreciation is as well extended to all professionals, regional and district supervisors, enumerators and field supervisors as well as the media for their dedicated work. Certainly, without their commitment and dedication, the census would not have been successful. We would also like to thank the public for their cooperation during the entire period of the Census.

Dr. Albina Chuwa
Statistician General
National Bureau of Statistics

Salum Kassim Ali
Chief Government Statistician
Office of the Chief Government
Statistician, Zanzibar

Executive Summary

The 2022 Tanzania Mainland Basic Demographic and Socio-Economic Profile provides a short descriptive analysis and related tables on main thematic areas covered in the 2022 Population and Housing Census. Areas covered are population size, growth and distribution; age and sex profile; household composition; marital status; national identification documents and citizenship; survival of parents; education, literacy and numeracy; employment and economic activities; disability; land ownership; housing characteristics, asset ownership and environmental control and access and use of Information and Communication Technology (ICT) by individuals and households. In many cases, information has been disaggregated by place of residence and where possible comparisons have been made with previous Census(es) to observe the trend over time. New topics covered in the 2022 PHC for the first time to fill the national data gaps include; national identification documents, numeracy, land title deed status, production and disposal of Electronic and Electric Equipment (EEE) waste, forestry; and (ICT).

Chapter One presents an overview of the 2022 PHC. It highlights on the brief history of census undertaking in the country and the main objective of the 2022 PHC. It also highlights on preparatory and implementation of census activities at different levels as well as the legal framework, census organisation structure, development of census instruments, cartographic work, pilot census, census publicity and advocacy campaigns. Furthermore, the chapter elaborates on census enumeration activities including recruitment and training of personnel, distribution of enumeration materials and the actual enumeration exercise. Post enumeration activities (data processing and quality control procedures) are also discussed in this Chapter.

Chapter Two gives a user of this publication an understanding on the size, growth and distribution of Tanzania Mainland population from the 2022 PHC and previous censuses. Tanzania Mainland has a population of 59.9 million persons, out of those, 30.7 million are females and 29.2 million are males. Population of Tanzania Mainland grew at an average annual growth rate of 3.2 percent from 2012 to 2022 representing an increase of 37 percent over a 10-year period. At this rate, the population of Tanzania Mainland is expected to double in the next 22 years that is in year 2044. Tanzania Mainland population remains predominantly rural, with 65.6 percent of its total population living in rural areas and 34.4 percent living in urban areas.

Chapter Three is about age and sex profile of the Tanzanian Mainland population. The Chapter presents population by age groups and sex. The data depicts a young population age structure with a median age of 18 years. About forty-three percent of the population is aged below 15 years. The percentage of the working age population (15-64 years) increased from 49.9 percent in 1988 Census to 53.4 percent in 2022. The percentage of the elderly population aged 65 years and above in Tanzania Mainland remained almost the same over the two decades (3.9% in 2002 and 2012 and 3.8% in 2022). Furthermore, the dependency ratio for Tanzania Mainland is 87.

Chapter Four presents information on household composition. Tanzania Mainland has 13,776,975 private households, out of which 8,355,992 (60.7 %) are in rural areas and 5,420,983 (39.3%) in urban areas. This is an increase from 32.9 percent in 2012 to 39.3 percent in 2022. The average household size slightly decreased from 4.7 persons in 2012 to 4.3 persons in 2022. Female-headed households in Tanzania Mainland increased from 33.5 percent in 2012 to 35.9 percent in 2022. Furthermore, the percentage of female headed households is slightly higher in urban areas (36.9%) than in rural areas (35.3%).

Chapter Five presents the census results on marital status for persons aged 15 years and above. Over fifty percent of persons aged 15 years and above are married; females are more likely (52.3%) to be married than males (50.2%). About five percent of persons aged 15 years and above are widowed; percentage of widowed females is significantly higher (7.9%) than that of males (1.3%). Comparison between 2012 and 2022 Censuses shows an increase in the proportion of persons in the categories of never married, divorced and widowed. The Mean Age at First Marriage in 2022 is 26 years for males and 22 years for females. The Mean Age at First Marriage for males and females almost remained the same in 2012 and 2022 Censuses.

Chapter Six provides information on national identification documents and citizenship. Most of the population (69.3%) have neither birth certificate nor birth notification. Percentage of population with birth certificate is 27.7 and it is higher (46.0%) among the under-five population. About 22.4 percent of persons aged 18 years and above have national identification cards and 13.7 percent have national identification numbers. It is also noted that about 7.0 percent of all persons in Tanzania Mainland have health insurance from national health insurance fund (NHIF) or community health insurance fund (CHIF).

More than ninety nine percent (99.5%) of the enumerated population in Tanzania Mainland are Tanzanians. The majority of non-Tanzanians came from neighbouring African countries of Burundi, Democratic Republic of Congo, Rwanda, Kenya, and Madagascar. Outside Africa, India and Saudi Arabia represent a relatively large number of persons from Asia and middle East countries enumerated in Tanzania 2022.

Chapter Seven presents information on survival of parents. Results indicate that 89.5 percent of all children under 18 years in Tanzania Mainland have both parents alive. Children under 18 years who were reported to have their fathers dead are almost three times (5.3%) of those who were reported to have their mothers dead (1.8%). However, in the Tanzania and International context, an “orphan” is a person who has lost one or both parents. By this broad definition, 10.5 percent of children under 18 years in Tanzania Mainland are orphans.

Chapter Eight presents information on literacy, numeracy and education. Adult literacy rate for persons aged 15 years and above in Tanzania Mainland is 82.8 percent. Literacy rate is higher among males (86.6 percent) than females (79.2 percent). Numeracy rate among persons aged five years and above is 78.4 percent and it is higher among males (79.3%) than females (77.6%). Net Enrolment Rate (NER) for primary schools is 78.6 percent. It is higher (81.1%) among females than males (76.1%). Majority (72.5%) of the population aged four years and above attained primary education, 19.6 percent attained ordinary level secondary education and 5.3 percent attained university education.

Chapter Nine presents information on employment and current economic activities for persons aged 15 years and above. There are 33,389,842 persons aged 15 years and above in Tanzania Mainland. Out of these, 23,986,730 persons are employed. The unemployment rate in Tanzania Mainland using International relaxed definition is 7.4 percent with more female (8.8%) than males (5.9%). The overall Labour Force Participation Rate (LFPR) for Tanzania Mainland is 77.6 percent whereby male has a higher (80.3%) percentage of LFPR than female (75.2%).

Chapter Ten highlights on the disability status in Tanzania Mainland. Persons with disabilities (PWDs) in this publication are those with physical, mental, intellectual or sensory impairment which may hinder or limit their full and effective participation in society on an

equal footing with others. There are 5.1 million persons (about 11.2%) of the total population aged 7 years and above living with some form of disability. Difficulty in seeing (3.0%) and walking (1.9%) are the most common type of disabilities in the country. Prevalence of disability has increased from 9.3 percent in 2012 to 11.2 percent in 2022. The use of assistive devices among PWDs is very low.

Chapter Eleven focuses on status of land ownership including information on persons owning land, type of ownership and legal documents possession. Almost one-third (33.0%) of population aged 15 years and above in Tanzania Mainland own land for different uses, including agriculture, residential, commercial or industrial. The proportion of females (29.8 percent) owning land is low compared with that of males (36.6%). Almost fifty percent (47.2%) of persons aged 15 years and above in Tanzania Mainland own land without legal documents. Among the landowners with title deeds in Tanzania, majority of them own land jointly (17.7%) followed by those owning land alone (14.2%).

Chapter Twelve presents information on housing characteristics, assets ownership and environmental control. In Tanzania Mainland 64.8 percent of households live in their own houses while 20.2 percent live in privately rented houses. The percentage of households living in their own houses is higher (75.8%) in rural than urban areas (47.9%). Almost one-third (31.8%) of households in Tanzania Mainland have no legal documents over the land where their houses are built while only 11.6 percent have title deeds. About 56 percent of households are living in houses with improved floor covering materials. Nearly 70 percent of households use improved sources of drinking water. More than half (59.4%) of households use improved toilet facilities. Firewood, used by 56.0 percent of households and charcoal (25.8%) are main sources of energy for cooking.

The main source of energy for lighting is electricity from the national grid (TANESCO) used by 36.6 percent of household while 33.2 percent use solar. Percentage of households using electricity for lighting from the national grid increased from 20.7 percent in 2012 to 36.6 percent in 2022. Four out of ten households use burning of solid waste as the main method of solid disposal, 21.4 percent use regularly collection methods and 59.6 percent of households mix electronic waste with other refuse.

Chapter Thirteen Chapter Thirteen highlights the households and individuals Access and Use of Information and Communication Technology (ICT), including Ownership of ICT equipment and the Type of Use of ICT equipment in Tanzania Mainland. It is shown that there is significant mobile phone penetration in Tanzania Mainland, with 85.0 percent of households having at least one member owning a mobile phone. Ownership of mobile phones among individuals aged 15 years and above is higher in urban areas (89.6%) compared with rural areas (77.9%) of proportions of non-smartphone usage regardless of ownership are similarly high, with 91.0 percent of individuals in urban areas and 83.3 percent in rural areas. The predominant use of ICT equipment is for communication purposes, accounting for 83.3 percent of usage.

Census Result in Brief

Summary of Key Indicators for Tanzania Mainland, 2022 Census

Indicator	Tanzania Mainland		Rural		Urban	
	Number	Percentage	Number	Percentage	Number	Percentage

Foreword	ii
Acknowledgement	vi
Executive Summary	viii
Census Result in Brief	xiii
Abbreviation/Acronym	xxxix
Concept and Definition	xli
CHAPTER ONE	1
Overview of the 2022 Population and Housing Census	1
1.1 Introduction	1
1.2 Objective of the 2022 PHC	2
1.3 Preparations for the 2022 PHC	3
1.4 Census Enumeration Activities.....	7
1.5 Data Processing	9
1.6 Quality Control Procedures	9
CHAPTER TWO	10
Population Size, Growth and Distribution	10
2.1 Introduction	10
2.2 Population Size and Growth	10
2.3 Regional Population Size and Growth.....	12
2.4: Population Distribution by Region	14
CHAPTER THREE	17
Age and Sex Profile.....	17
3.1 Introduction	17
3.2 Quality of Age and Sex Data	18
3.4 Population Distribution by Selected Age Groups.....	23
CHAPTER FOUR	31
Household Composition	31
4.1 Introduction	31
4.2 Number of Households.....	31
4.3 Average Household Size	34
4.4 Household Headship.....	36
CHAPTER FIVE	50
Marital Status	50

5.1 Introduction	50
5.2 Marital Status	51
5.3 Mean Age at First Marriage	59
CHAPTER SIX	63
National Identification Documents and Citizenship	63
6.1 Introduction	63
6.2 National Identification Documents	63
6.3 Citizenship	71
CHAPTER SEVEN	74
Survival of Parents	74
7.1 Introduction	74
7.2 Survival of Parents	75
7.3 Orphanhood	77
CHAPTER EIGHT	80
Education, Literacy and Numeracy	80
8.1 Introduction	80
8.2 Literacy	80
8.3 Numeracy	90
8.4 Education	94
CHAPTER NINE	112
Employment and Economic Activities	112
9.1 Introduction	112
9.2 Current Economic Activity Status	113
9.3 Current Unemployment	114
9.4 Labour Force Participation Rate	115
9.5 Employment by Industry	115
9.6 Occupation Status	116
9.7 Employment by Sector	117
9.8 Informal Non-Agricultural Economic Activities	118
CHAPTER TEN	119
Disability	119
10.1 Introduction	119
10.2 Prevalence of Disability	121
10.3 Prevalence of Persons with Albinism	127
10.4 Population with Other Types of Disabilities	128

10.5	Causes of Disabilities	129
10.6	Use of Assistive Devices	131
CHAPTER ELEVEN.....		132
Land Ownership and Use.....		132
11.1	Introduction.....	132
11.2	Land Ownership Status	133
11.3	Possession of Legal Land Documents	138
CHAPTER TWELVE		140
Housing Characteristics, Assets Ownership and Environmental Control		140
12.1	Introduction	140
12.2	Housing Ownership and Tenure Status.....	141
12.3	Household Characteristics.....	144
12.4	Water and Sanitation.....	155
12.5	Sources of Energy.....	168
12.6	Household Environmental Control.....	176
12.7.	Ownership of Assets	184
CHAPTER THIRTEEN		189
Access and Use of Information and Communication Technology by Individuals and Households		189
13.1	Introduction	189
13.2	Ownership of Television	190
13.3	Households with Landline Telephone.....	190
13.4	Households with Internet Facility.....	191
13.5	Mobile Phones.....	194
13.6	Computers.....	228
CHAPTER FOURTEEN		246
Summary of Key Findings, Policy Implication and Recommendations		246
14.1	Introduction	246
14.2	Key Findings.....	246
Policy Implications.....		257
Annexes		259
Annex: List of Contributors.....		262
BIBLIOGRAPHY.....		265

List of Tables

Table 2.1: Population Size and Growth Indicators by Administrative Units and Sex; Tanzania Mainland, 2002, 2012 and 2022 PHCs	11
Table 2. 2: Population Size and Growth Indicators by Place of Residence and Region; Tanzania Mainland, 2002, 2012 and 2022 PHCs	13
Table 2. 3: Number and Percentage Distribution of Population by Place of Residence and Region; Tanzania Mainland, 2022 PHC	16
Table 3. 1: Number and Percentage Distribution of Population by Sex and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	19
Table 3. 2: Number and Percentage Distribution of Population by Sex and Five-Year Age Groups; Tanzania Mainland Rural, 2022 PHC.....	20
Table 3. 3: Number and Percentage Distribution of Population by Sex and Five-Year Age Groups; Tanzania Mainland Urban, 2022 PHC	20
Table 3. 4: Number and Percentage of Population by Selected Age Groups and Sex; Tanzania Mainland, 2022 PHC.....	23
Table 4.1: Number and Percentage Distribution of Private Households by Place of Residence, Sex of Head of Household and Age Group; Tanzania Mainland, 2022 PHC	32
Table 4. 2: Number and Percentage Distribution of Households by Place of Residence and Region; Tanzania Mainland, 2022 PHC	33
Table 4. 3: Population in Private Households, Number of Households and Average Household Size by Place of Residence and Region; Tanzania Mainland, 2012 and 2022 PHCs	36
Table 4. 4: Percentage Distribution of Male and Female-Headed Households by Place of Residence and Region; Tanzania Mainland, 2012 and 2022 PHCs.....	37

Table 4. 5: Distribution of Population in Private Households by Sex of Head of Household, Number of Households, Average Household Size and Place of Residence and Region; Tanzania Mainland, 2022 PHC.	39
Table 4. 6: Percentage Distribution of Households living in Improved/Unimproved Houses by Sex of Household Head and Place of Residence, Tanzania Mainland, 2022 PHC	40
Table 4. 7: Percentage Distribution of Households living in Improved/Unimproved Houses by Sex and Age of Household Head, Tanzania Mainland 2022 PHC	41
Table 4. 8: Percentage Distribution of Male headed Household by Marital Status and Occupation, Tanzania Mainland 2022 PHC	42
Table 4. 9: Percentage Distribution of Female headed Household by Marital Status and Occupation, Tanzania Mainland 2022 PHC	43
Table 4. 10: Percentage Distribution of Households with Improved/Unimproved Toilet Facilities by Sex of Household Head, Place of Residence and Region, Tanzania Mainland, 2022 PHC	45
Table 4. 11: Percentage Distribution of Households Using Improved and Unimproved Sources of Drinking Water by Sex of Household Head, Place of Residence and Region; Tanzania Mainland, 2022 PHC.....	47
Table 4. 12:Percentage Distribution of Households with Children under 18 Years by Sex of Household Head, Place of Residence and Region; Tanzania Mainland 2022 PHC.....	49
Table 5. 1: Percentage Distribution of Population Aged 15 Years and Above by Place of Residence, Sex and Marital Status; Tanzania Mainland, 2022 PHC.....	52
Table 5. 2: Percentage Distribution of Population Aged 15 Years and Above by Marital Status and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	53
Table 5. 3: Percentage Distribution of Male Population Aged 10 Years and Above by Marital Status and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	54

Table 5. 4: Percentage Distribution of Female Population Aged 10 Years and Above by Marital Status and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	55
Table 5. 5: Percentage Distribution of Population Aged 10 Years and Above by Marital Status and Selected Age Groups; Tanzania Mainland, 2022 PHC	55
Table 5. 6: Percentage Distribution of Male Population Aged 15 Years and Above by Marital Status and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	56
Table 5. 7: Percentage Distribution of Female Population Aged 15 Years and Above by Marital Status and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	56
Table 5. 8: Percentage Distribution of Population Aged 15 Years and Above by Marital Status, Place of Residence and Region; Tanzania Mainland, 2022 PHC	57
Table 5. 9: Mean Age at First Marriage by Sex and Place of Residence and Region; Tanzania Mainland, 2012 and 2022 PHCs.....	62
Table 6. 1: Percentage Distribution of Population by Status of Birth Certificate, Sex and Age Groups; Tanzania Mainland, 2022 PHC.....	65
Table 6. 2: Percentage Distribution of Population by Status of Birth Certificate, Sex and Age Groups; Tanzania Mainland Rural, 2022 PHC.....	66
Table 6. 3: Percentage Distribution of Population by Status of Birth Certificate, Sex and Age Groups; Tanzania Mainland Urban, 2022 PHC.....	66
Table 6. 4: Percentage Distribution of Population by Status of Birth Certificate, Sex and Region; Tanzania Mainland, 2022 PHC	67
Table 6. 5: Distribution of Population Aged 18 years and Above Possessing National Identification Documents by Place of Residence and Region; Tanzania Mainland, 2022 PHC.....	69
Table 6. 6: Distribution of Population Possessing Health Insurance Cards by Sex, Place of Residence and Region; Tanzania Mainland, 2022 PHC.....	71

Table 6. 7: Distribution of Population by Place of Residence, Sex and Country of Citizenship; Tanzania Mainland, 2022 PHC	72
Table 7.1: Number and Percentage of Children Under 18 Years by Age and Survival of Parents; Tanzania Mainland, 2022 PHC	75
Table 7. 2: Number and Percentage of Male Children Under 18 Years by Age and Survival of Parents; Tanzania Mainland, 2022 PHC	76
Table 7. 3: Number and Percentage of Female Children Under 18 Years by Age and Survival of Parents; Tanzania Mainland, 2022 PHC	76
Table 7. 4: Percentage Distribution of Population Aged Under 18 Years by Survival of Parents and Region; Tanzania Mainland, 2022 PHC	78
Table 8.1: Distribution of Population Aged Five Years and Above by Literacy Rate, Sex and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	81
Table 8. 2: Distribution of Population Aged Five Years and Above by Literacy Rate, Sex and Five Year Age Groups; Tanzania Mainland Rural, 2022 PHC	82
Table 8. 3: Distribution of Population Aged Five Years and Above by Literacy Rate, Sex and Five-Year Age Groups; Tanzania Mainland Urban, 2022 PHC	82
Table 8. 4: Literacy Rate by Place of Residence, Sex and Selected Age Groups; Tanzania Mainland, 2022 PHC	83
Table 8. 5: Literacy Rates for Persons Aged 15 Years and Above by Sex, Place of Residence and Region; Tanzania Mainland, 2012 and 2022 PHCs	86
Table 8. 6: Percentage Distribution of Adult Population Aged 15 Years and Above by Literacy Status and Five Year Age Groups; Tanzania Mainland, 2022 PHC	87
Table 8. 7: Literacy Rate for Adult Population Aged 15 Years and Above by Literacy Status, Place of Residence and Sex; Tanzania Mainland, 2022 PHC	88
Table 8. 8: Literacy Rate for Adult Population Aged 15 Years and Above by Place of Residence and Region; Tanzania Mainland, 2022 PHC	89
Table 8. 9: Percentage Distribution of Population Aged Five Years and Above by Numeracy Rate, Sex, Place of Residence and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	91

Table 8. 10: Numeracy Rate for Selected Age Groups by Place of Residence and Sex; Tanzania Mainland, 2022 PHC	92
Table 8. 11: Numeracy Rates for Adult Population Aged 15 Years and Above by Sex, Place of Residence and Region; Tanzania Mainland, 2022 PHC.....	92
Table 8. 12: Number and Percentage of Population Aged Four Years and Above by Sex, School Attendance Status and Age; Tanzania Mainland, 2022 PHC	96
Table 8. 13: Number and Percentage Distribution of Population Aged Four Years and Above by Sex, School Attendance Status and Age; Tanzania Mainland Rural, 2022 PHC.....	98
Table 8. 14: Number and Percentage Distribution of Population Aged Four Years and Above by Sex, School Attendance Status and Age; Tanzania Mainland Urban, 2022 PHC.....	99
Table 8. 15: Number and Percentage Distribution of Population Aged Four Years and Above by Sex, School Attendance Status and Region; Tanzania Mainland, 2022 PHC.....	101
Table 8. 16: Number and Percentage Distribution of Population Aged Four Years and Above by Sex, School Attendance Status and Region; Tanzania Mainland Rural, 2022 PHC	102
Table 8. 17: Percentage Distribution of Population Aged Four Years and Above by Sex, School Attendance Status and Region; Tanzania Mainland Urban, 2022 PHC.....	103
Table 8. 18: Percentage Distribution of Population Aged Four Years and Above by School Attendance Status and Level of Education; Tanzania Mainland, 2022 PHC.....	104
Table 8. 19: Percentage Distribution of Population Aged Four Years and Above by School Attendance Status and Level of Education; Tanzania Rural, 2022 PHC	105
Table 8. 20: Percentage Distribution of Population Aged Four Years and Above by School Attendance Status and Level of Education; Tanzania Urban, 2022 PHC.....	106
Table 8. 21: Net Enrolment Rates in Primary Schools by Place of Residence, Sex and Region; Tanzania Mainland, 2022 PHC	107
Table 8. 22: Number and Percentage of Population Aged Four Years and Above by Sex and Level of Educational Attainment; Tanzania Mainland, 2022 PHC	111
Table 9. 1: Number of Persons Aged 15 Years and Above by Economic Activity Status (Relaxed International Definition of Employment) and Sex; Tanzania Mainland, 2022 PHC.....	113

Table 9. 2: Number of Persons Aged 15 Years and Above by Economic Activity Status (Relaxed International Definition of Employment) and Place of Residence; Tanzania Mainland, 2022 PHC	113
Table 9. 3: Number of Persons Aged 15 Years and Above by Economic Activity Status (Relaxed International Definition of Employment) and Selected Age Groups; Tanzania Mainland, 2022 PHC	114
Table 9. 4: Percentage Distribution of Employed Population Aged 15 Years or Above by Sex and Industry of Employment; Tanzania Mainland, 2022 PHC.....	116
Table 9. 5: Percentage Distribution of Employed Population Aged 15 Years and Above by Sex and Occupation; Tanzania Mainland, 2022 PHC	117
Table 9. 6: Percentage Distribution of Employed Persons Aged 15 Years and Above by Sex and Sector; Tanzania Mainland, 2022 PHC	117
Table 9. 7: Percentage Distribution of Population Aged 15 Years and Above Engaged in Informal Non-Agricultural Economic Activities by Sex and Selected Age Groups; Tanzania Mainland, 2022 PHC	118
Table 10. 1: Disability Prevalence Among Persons Aged 7 Years and Above by Type of Disability, Place of Residence and Region; Tanzania Mainland, 2022 PHC	122
Table 10. 2: Disability Prevalence by Sex, Place of Residence and Region; Tanzania Mainland, 2022 PHC	124
Table 10. 3: Disability Prevalence Among Persons Aged 7 Years and Above by Region; Tanzania Mainland, 2012 and 2022 PHCs	125
Table 10. 4: Numbers and Percentage of Persons with Albinism by Sex, Place of Residence and Region; Tanzania Mainland, 2022 PHC	127
Table 10. 5: Number and Percentage of Persons with Albinism by Sex and Five-Year Age Groups; Tanzania Mainland, 2022 PHC	128
Table 10. 6: Percentage Distribution of Persons with Other Types of Disabilities by Place of Residence and Sex; Tanzania Mainland, 2022 PHC	129

Table 10. 7: Percentage Distribution of Persons with Disability by Cause of Disability, Place of Residence and Sex; Tanzania Mainland, 2022 PHC	130
Table 10. 8: Percentage Distribution of Persons with Disability by Sex, Cause of Disability and Type of Disability; Tanzania Mainland, 2022 PHC	130
Table 10. 9: Percentage of Persons with Disability Using Assistive Devices by Sex and Type of Disability; Tanzania Mainland, 2022 PHC	131
Table 11. 1: Distribution of Persons Aged 15 Years and Above Owning Land by Place of Residence and Sex; Tanzania Mainland, 2022 PHC	133
Table 11. 2: Percentage Distribution of Persons Aged 15 Years and Above by	134
Table 11. 3: Percentage Distribution of Persons Aged 15 Years and Above by Place of Residence, Age Groups, Land Ownership Status and Sex; Tanzania Mainland, 2022 PHC.....	135
Table 11. 4: Percentage Distribution of Persons Aged 15 Years and Above Owning Land by Age group, Land Ownership Status and Sex: Tanzania Mainland 2022 PHC	136
Table 11. 5: Percentage Distribution of persons Aged 15 years and above by Place of Residence, Sex and Ownership of Legal Documents Status, Tanzania Mainland, 2022 PHC.....	138
Table 12. 1: Percentage Distribution of Households by Ownership Status of the Main Dwelling, Place of Residence and Region; Tanzania Mainland, 2022 PHC	142
Table 12. 2: Percentage Distribution of Households Living in Own Houses by Type of Legal Rights, Place of Residence and Region; Tanzania Mainland, 2022 PHC	143
Table 12. 3: Percentage Distribution of Households by Type of Roofing Materials of Main Dwelling, Place of Residence and Region; Tanzania Mainland, 2022 PHC	146

Table 12. 4: Percentage Distribution of Households by Type of Floor Covering Materials of Main Dwelling, Place of Residence and Region; Tanzania Mainland, 2022 PHC	149
Table 12. 5: Percentage Distribution of Households by Type of Wall Materials of Main Dwelling, Place of Residence and Region; Tanzania Mainland, 2022 PHC	151
Table 12. 6: Percentage Distribution of Households by Number of Rooms for Sleeping, Place of Residence, Headship and Region; Tanzania Mainland, 2022 PHC	154
Table 12. 7: Percentage Distribution of Households by Main Source of Drinking Water, Place of Residence and Region; Tanzania Mainland, 2022 PHC	159
Table 12. 8: Percentage Distribution of Households by Main Type of Toilet Facility, Place of Residence and Region; Tanzania Mainland, 2022 PHC	163
Table 12. 9: Percentage Distribution of Households by Main Type of Toilet Facility and Region; Tanzania Mainland, 2012 and 2022 PHCs	166
Table 12. 10: Percentage Distribution of Households by Main Source of Energy for Cooking, Place of Residence and Region; Tanzania Mainland, 2022 PHC	170
Table 12. 11: Percentage Distribution of Households by Main Source of Energy for Lighting, Place of Residence and Region; Tanzania Mainland, 2022 PHC	174
Table 12. 12: Percentage Distribution of Households by Main Means of Solid Waste Disposal, Place of Residence and Region; Tanzania Mainland, 2022 PHC	177
Table 12. 13: Percentage Distribution of Households by Type of Authorities Collecting Waste, Place of Residence and Region; Tanzania Mainland, 2022 PHC	179
Table 12. 14: Percentage Distribution of Households by Methods of Disposing Electronic Waste by Place of Residence and Region; Tanzania Mainland, 2022 PHC	182
Table 12. 15: Percentage Distribution of Households by Type of Transport Assets Owned, Place of Residence, Headship and Region; Tanzania Mainland 2022 PHC	184
Table 12. 16: Percentage Distribution of Households by Type of Housing and Cooking Assets Owned, Place of Residence, Headship and Region; Tanzania Mainland, 2022 PHC	186

Table 12. 17: Percentage Distribution of Households by Type of Agricultural Assets Owned, Place of Residence, Headship and Region; Tanzania Mainland, 2022 PHC.....	187
Table 13. 1: Number and Percentage Distribution of Households Owning Selected ICT Equipment by Place of Residence and Region; Tanzania Mainland, 2022 PHC.....	192
Table 13. 2: Number and Percentage Distribution of Population Aged 15 Years and Above Owning Mobile Phones by Sex, Type, Place of Residence and Region; Tanzania Mainland, 2022 PHC	196
Table 13. 3: Number and Percentage Distribution of Households with at Least One Member Aged Four Years and Above Owning Mobile Phone by Type, Place of Residence and Region; Tanzania Mainland, 2022 PHC	202
Table 13. 4: Number and Percentage Distribution of Population Aged Four Years and Above Owning Mobile Phones by Sex, Type, Place of Residence and Age Group; Tanzania Mainland, 2022 PHC	205
Table 13. 5: Number and Percentage Distribution of Population Aged 15 Years and Above Owning Non-Smartphone by Sex, Place of Residence, and Education Level; Tanzania Mainland, 2022 PHC.....	207

ZAN ID	Zanzibar Identification Card

Concept and Definition

Population and Housing Census

Census Night is a reference point for Census enumeration and all questions in the census related to that night. According to the Tanzania 2022 Population and Housing Census, the Census night was the night of 22nd /23rd August, 2022.

De facto Methodology means persons were enumerated where they slept on the Census night.

Enumeration Area (EA) is a designated area with an average of 50 to 150 households.

Geographical Information System (GIS) is a system designed to capture, store, manipulate, analyse, manage and present all types of geographical data.

Population and Housing Census (PHC) is defined as the total process of collecting, compiling, analysing, evaluating, publishing and disseminating demographic, economic and social data pertaining, at a specified time, to all persons in a country or in a well delineated part of a country (United Nations definition).

Quality Control refers to observations, techniques and activities used to fulfil requirements for quality.

Population Size, Growth and Distribution

Population growth refers to the change in population over time and can be quantified as the change in the number of individuals in a population using "per unit time" for measurement.

Population Growth Rate refers to the change in population over a unit time period, often expressed as a percentage of the number of individuals in the population at the beginning of that period. Growth rate in this book is expressed as an exponential rate of growth of population from year 2012 to 2022 and is termed as average annual intercensal population growth rate.

Age and Sex Profile

Age is the number of years one had lived as at last birthday i.e., in reference to the census night.

Age-Dependency Ratio is the ratio of people in the “dependent” ages (those under age 15 and age 65 and older) to those in the “working age” (15-64 years).

Elderly Population refers to persons aged 65 years and above (according to international definition). However, according to the Tanzania National Ageing Policy, elderly is an individual who is 60 years and above.

Median Age is the age at which exactly half the population is older and half is younger.

Population Pyramid is a graphical presentation of population’s age and sex composition. Horizontal bars present the numbers or proportions of males and females in each age group.

Sex Ratio is the ratio of males to females in a given population usually expressed as the number of males for every 100 females.

Working Age Population in Census is the population age 15 to 64 years (international definition).

Young People are the population age 0 to 14 years.

Youth Population is the population aged 15-24 years (international definition). However, according to the Tanzania’s Youth Policy, Youth Population is the population aged 15 to 35 years.

Household Composition

Average Household Size is the average number of persons per private household. Average household size is obtained by dividing the total number of persons living in private households to the total number of private households.

Collective Household is a group of persons residing in one dwelling or compound having no head of household. Boarding schools, hospitals and camps are examples of collective households.

Head of Household is a person who is acknowledged as such by other household members.

Household refers to a person or group of persons who reside in the same homestead or compound but not necessarily in the same dwelling unit, have same cooking arrangements, and are answerable to the same household head except for collective household.

Private Household is defined as a person or group of persons who reside in the same homestead or compound but not necessarily in the same dwelling unit, having the same cooking arrangements, and are answerable to the same household head.

Marital Status

Divorced Persons are those persons who were once married but their marriages were permanently terminated and have not remarried since then. Note that in polygamous marriages the divorce of one or more wives does not categorize the husband as divorced if he still lives with the other wife (wives).

Living Together is an act of persons who are not formally married but are in consensual union or are living in a socially recognized stable union.

Marriage is an act of persons who are living together or separately but are formally married irrespective of the type of marriage, which may be a customary, civil or religious marriage.

Mean Age at First Marriage is defined as the average length of single life expressed in years among those who marry before age 50.

Never Married means persons who have remained single all their lives excluding persons who have lived with another person and are now living alone.

Separated is the act of persons who were once married but now are living apart. Those who live apart because their spouses are employed far away from home or for similar reasons are considered to be married.

Widowed is the act of persons whose marriages were terminated by death of one partner and the remaining one has not remarried since. Note that in polygamous marriages the death of one or more wives does not make the husband a widower if he still has the other wife (wives).

National Identification Documents and Citizenship

Birth Certificate is a vital record that documents the birth of a child. The term "birth certificate" can refer to either the original document certifying the circumstances of the birth or to a certified copy of or representation of the ensuing registration of that birth.

Birth Registration is the process by which a child's birth is recorded in the civil register by the Government authority.

National Identification is any official document that may be used to prove a person's identity such as the bearer's full name, birth date, address, an identification number, card number, sex, citizenship and more.

Survival of Parents

Orphanhood is the condition of being a child without living parents. In other words, the term 'orphan' is understood to mean a person whose parents are both dead. However, United Nations definition that was adopted by Tanzanian Government identifies an orphan as a child under 18 years of age who has lost one or both parents.

Literacy, Numeracy and Education

Educational Attainment is the highest grade completed according to the country's educational system. A grade is a stage of instruction usually covered in the course of a school year.

Gross Enrolment Rate (GER) is defined as the number of children attending primary school regardless of age divided by the total number of children age 7-13 years.

Literacy is the ability to read and write with an understanding a short simple sentence in everyday life.

Literacy Rate is the percentage of a population that can read and write in Kiswahili, English, both Kiswahili and English or in any other language(s).

Net Enrolment Rate (NER) is defined as the number of children age 7-13 years who are attending school divided by the total number of children in that age group.

Numeracy is the ability to access, use, interpret and communicate simple mathematical information and ideas, to engage in and manage mathematical demands for a range of situations in adult life.

Numeracy Rate is the percentage of a population who has ability to access, use, interpret and communicate simple mathematical information and ideas.

School Attendance refers to attendance at any regular authorized or licensed educational institution or programme for organized learning at any level of education at the time of the Census.

Employment and Economic Activities

Economic activity status is a measure of whether or not a person was an active participant in the labour market during this period. This refers broadly to economically active population which includes employed and unemployed populations. It also includes inactive population covering all persons who were without work during the reference period and were not available for work.

Labour Force Participation Rate (LFPR) is defined as the number of persons in the labour force as a percentage of the working age population.

Informal Non-Agricultural Economic Activities refers as an activity that is unregulated and often without formal recorded business transactions that normally occur outside the framework of formal business regulations and system.

Unemployed persons comprise of persons who in the last seven days prior to the census enumeration were not engaged in any economic activity but were available for work regardless of whether they took any effort to look for work (According to the relaxed international definition of unemployment).

Disability

Disability defines as a loss or limitation of opportunities to take part in the normal life in their community on an equal level with others due to physical, mental or social factors. All three definitions use the concept of activity limitation in defining disability rather than physical impairment.

Land Ownership

Certificate of Right of Occupancy is a formalized land tenure system. It allows individuals or entities to acquire rights to use and occupy land for specific purposes, such as agriculture, residential, commercial or industrial.

Customary land tenure is the form of land ownership based on customary practices and traditional land rights.

Land ownership is a process of acquiring land tenure or right of occupancy from a relevant Government authority. It is categorized into three main tenure systems namely Customary Land Tenure, Right of Occupancy and Government Land.

Land Title Deeds is a legal document that states and proves a person's legal right to own a piece of land.

Housing Characteristics, Assets Ownership and Environmental Control

Improved roofing materials are durable roofing materials used for roofing which include iron sheet, tiles, concrete and asbestos. Unimproved roofing materials include grass or leaves, mud and leaves, plastics or box and tent.

Improved floor covering materials are long lasting flooring materials such as cement, ceramic tiles, parquet or polished wood, terazzo, vinyl or asphalt strips. Non-improved materials include wood planks, palm or bamboo, earth or sand and dung.

Room for sleeping is defined as any space within a dwelling which is currently used for sleeping by the household members. Any space within a dwelling can be termed as a room for sleeping if currently used by household members for sleeping purposes and can be a sitting room, a dining room or even a store.

Improved sources of drinking water include sources that, by nature of their construction or through active intervention, are protected from outside contamination, particularly faecal matter. It comprises piped water, tube well or borehole, protected dug well, protected spring, rainwater, bottled water, carts with small tank/drum and tanker truck. Unimproved sources of drinking water include unprotected dug well, unprotected spring and surface water.

Improved sanitation facilities are facilities that ensure hygienic separation of human excreta from human contact. They include flush or pour flush toilet that flushes the water and waste to a piped sewer system, septic tank, pit latrine or unknown destination;

ventilated improved pit (VIP) latrine and pit latrine with washable slab. Unimproved facilities include pit latrine without slab (open pit) and bucket.

Solid waste disposal: Is the collection, sorting, transport and treatment of waste as well as its storage and tipping above or burying; the transformation operations necessary for its re-use, recovery or recycling.

Electronic waste (E-waste): describes discarded electrical or electronic devices. It is also known as waste electrical and electronic equipment (WEEE) or end-of-life (EOL) electronics. Refers to discarded, recycled or refurbished electrical and electronic products.

Access and Use of Information and Communication Technology by Individuals and Households

Radio

Refers to a device capable of receiving broadcast radio signals using frequencies in the FM, AM, LW and SW bands. A radio can be a standalone unit or integrated into other devices, including alarm clocks, audio players, mobile telephones or computers.

Television

Refers to a device capable of receiving broadcast television signals using standard access methods, including radio frequency (over-the-air), cable, and satellite. A television set is usually a standalone unit but may be integrated into other devices, such as computers or mobile telephones.

The Internet

The Internet is a vast global network of interconnected computers and other electronic devices, allowing them to share information and communicate through a standardised set of protocols known as the Internet Protocol Suite (TCP/IP). It provides access to several communication services, including the World Wide Web and carries e-mail, news, entertainment and data files, irrespective of the device used.

Landline Telephone

A landline telephone is a communication device that transmits and receives sound, typically the human voice, through physical wire or fibre optic cable connections.

A mobile (cellular) telephone

A mobile phone, also known as a cellphone, is a portable device that allows for voice and data communication over a wireless cellular network. Mobile phones have become essential devices in daily life, profoundly impacting how we communicate, access information, and interact with the world around us.

Smart Mobile Phone (Smartphone)

Refers to a mobile phone device that performs many computer functions, typically having a touchscreen interface, broadband Internet access, and an operating system capable of running apps such as Facebook, WhatsApp or YouTube.

Non-Smartphone (Feature phone)

Refers to a phone device that performs only basic functions such as making and receiving calls, sending/receiving text messages and browsing Internet.

Computer

A computer is an electronic device designed to process, store, and manipulate data according to a set of instructions known as programs. It can perform a wide range of tasks, from simple calculations to complex operations involving data analysis, graphics design, and more.

Desktop Computer

A desktop computer is a personal computing device designed for regular use at a single location. Unlike portable devices like laptops and tablets, desktop computers typically comprise separate components, including a monitor (screen), a keyboard, a mouse, and a central processing unit (CPU) housed in a tower or desktop case.

Laptop

A laptop is a portable computer that integrates all the components of a traditional desktop computer into a single compact unit. Laptops are designed for convenience and mobility, making them ideal for use in various settings, such as at home, in the office, while travelling, or in educational environments.

Tablet

A tablet is a portable computing device with a touchscreen interface, allowing users to interact with digital content and applications through touch gestures. Tablets are larger than smartphones but smaller and more compact than laptops, making them highly portable while offering a screen size that enhances the experience of browsing the Internet, reading digital books, watching videos, and playing games.

CHAPTER ONE

Overview of the 2022 Population and Housing Census

1.1 Introduction

The United Nations defines a population census as the total process of collecting, compiling, analysing, evaluating, publishing and disseminating demographic, economic and social data pertaining, at a specified time, to all persons in a country or in a well delineated part of a country. It is the primary source of detailed data on the size, distribution and composition of the population. It covers all population groups such as private households, institutions, the homeless and migrants for all geographic and/or administrative units in a country.

Additionally, the term “Housing Census” is used to imply the collection of information related to housing conditions such as the number of households, access to basic household amenities and living conditions and hence the title “Population and Housing Census”. By combining population and housing data, policy makers and researchers gain valuable insights into demographic trends, social conditions and housing patterns, enabling them to make informed decisions and develop appropriate policies to address the needs of the population.

1.1.1 A Brief History of Census Undertaking in Tanzania

The history of population counts in Tanzania dates back to 1910. The first population census was conducted in 1958. Other censuses were conducted in 1967, 1978, 1988, 2002 and 2012 after the union of Tanganyika and Zanzibar in 1964. Since 1967, the country has conducted six decennial Population and Housing Censuses (PHC) on a *de-facto* basis in accordance with the United Nations (UN) Principles and Recommendations for Conducting Population and Housing Censuses.

Data collected in these censuses show that the population of Tanzania Mainland has increased about five times since 1967 from 11,958,654, to 59,851,347 persons in 2022. The 2022 PHC enumerated 59.9 million persons representing an average annual population growth rate of 3.2 percent during the 2012 - 2022 intercensal period compared with a growth rate of 2.7 percent recorded in the 2002 – 2012 period.

Unlike previous censuses, the 2022 PHC is the first digital census conducted in Tanzania, whereby a mobile technology was used at all stages of Census implementation. In the first phase, mobile GIS technology was used to facilitate demarcation of enumeration areas and

transmission of census cartographic information to the servers located at NBS/OCGS Headquarters. Likewise, in the second phase, Computer Assisted Personal Interviews (CAPI) technology was used for data capture and transmission of information from the field to the servers during enumeration. Mobile devices (tablets) were programmed with a data capture system developed using CSEntry (a CSPro tool for data capture) that runs on Android Operating System. Development of the applications and programming of the devices were done by Tanzanian experts. The third phase of Census implementation which includes data processing, analysis and dissemination is based on the use of more advanced technologies such as mobile phones for broadcasting census results and more iterative dashboards for data sharing.

1.2 Objective of the 2022 PHC

The main objective of conducting the 2022 PHC was to provide the Government with information on the size, distribution, composition and other social economic characteristics of the population, environment and information on housing conditions. This information contributes to the improvement of quality of life for Tanzanians through provision of current and reliable data for policy formulation, development planning, evidence-based decision making and service delivery. Census information is also used for monitoring and evaluating population and socio-economic programmes in the country.

1.2.1 Specific Objectives of the 2022 PHC

Specific objectives of the 2022 PHC were to:

- a) Increase availability and accessibility of accurate, timely and reliable data on demographic, socio-economic characteristics and environment;
- b) Enhance knowledge of stakeholders on socio-economic, demographic characteristics and environment of the Tanzanian population as well as patterns and trends of population growth; and
- c) Strengthen capacity of the National Bureau of Statistics (NBS) and the Office of Chief Government Statistician (OCGS) in carrying out population and housing censuses, in areas of planning, collecting, processing, analysing, disseminating, utilising and archiving population and housing census and other statistical data.

1.3 Preparations for the 2022 PHC

1.3.1 Legal Framework

The 2022 PHC was carried out in accordance with the Statistics Act CAP 351. The Act, *inter alia*, mandates the NBS, in collaboration with OCGS Zanzibar, to conduct population and housing censuses within the United Republic of Tanzania every ten years. In this respect, the Statistician General (SG) of NBS is responsible for planning the overall organisation and technical administration of the Census. Furthermore, SG is the Accounting Officer and in charge of all Census operations. The Order to conduct the 2022 Population and Housing Census on 23rd August, 2022 was made by H.E. Dr. Samia Suluhu Hassan, the President of the United Republic of Tanzania, on 21st March, 2022 and was published in the Tanzania Government Gazette of the 29th April, 2022 as directed by the Act.

1.3.2 Census Organisation

A Population and Housing Census is a massive undertaking that needs careful planning coupled with an appropriate organisational and administrative arrangement and procedures. These are necessary in ensuring that, extensive human and material resources mobilized for the census are effectively and efficiently used and that the census tight schedules and massive logistic requirements are met. During the 2022 Census, a well-planned decentralized census organisation was formed with a primary role of coordinating all census activities from the national down to the grass root level.

Preparations for the 2022 PHC were facilitated by various committees at national, regional, district, ward/shehia and village/mitaa levels to guide and monitor the Census processes. The committees drew members from Ministries, Departments and Agencies (MDAs) Higher Learning Institutions, Private Sector and Non-Governmental Organizations (NGOs). The main committees were: - National Census Central Committee, National Census Advisory Committee, Census Collaborators Forum, Technical Advisory Committee as well as Regional and Districts Census Committees.

The Prime Ministers' Office of the United Republic of Tanzania and the Second Vice Presidents' Office for the Government of Zanzibar were responsible for overseeing the overall operations of the 2022 PHC. The Regional and District Census Committees chaired by Regional and District Commissioners respectively were responsible for ensuring that all Census activities were successfully undertaken in their areas of jurisdiction.

The Population and Housing Census Commissars, one from each side of the United Republic of Tanzania, were responsible for publicity and advocacy activities such as educating, sensitizing and mobilizing the public for the census exercise. They were also responsible for resource mobilization and a link between census technical personnel and other stakeholders as well as enhancing political buy-in of the Census.

1.3.3 Development of Census Instruments

The Census instruments (questionnaires, manuals and other census documents) were developed in collaboration with national experts from MDAs, higher learning and research institutions, private sector and Non-State Actors. The 2022 PHC questionnaires were developed in accordance with the United Nations Principles and Recommendations for the 2020 Round of Population Censuses. They included topics from previous censuses for comparison purposes (both national, regional and international) and new topics to cater for the country's current data needs and to feed into regional and international programmes (i.e., East African Community Vision 2050; the Southern African Development Community Vision 2050; African Development Agenda 2063; and 2030 Agenda for Sustainable Development). The draft questionnaires were shared widely with various stakeholders both in Tanzania Mainland and Tanzania Zanzibar through stakeholders' workshops and the Census Committees. The final questionnaires were approved by the Central Census Committee.

The 2022 PHC had three main digital tools for data collection. The first one was a community questionnaire, which collected information on all social amenities; land use patterns and environmental or natural features and available community infrastructure. The second tool was the main census questionnaire which collected detailed information on demographic characteristics, disabilities, migration, possession of national documents, orphanhood, education level and economic activities. It also collected information on land ownership and information related to ICT ownership and use, fertility, mortality, housing, utilities, ownership of assets and agriculture. The third tool was a questionnaire for special population groups such as diplomats and travellers.

1.3.4 Cartographic Work

The 2022 PHC enumeration was preceded by extensive cartographic work covering the entire country. The main objective of the cartographic work was to delineate the entire country into Enumeration Areas (EAs) in order to produce maps required for Census

operations. In urban areas, EA sizes ranged from 50 to 150 households while for rural areas, a hamlet was considered as an EA.

Unlike in previous censuses, the 2022 Population and Housing Census used modern technology (Arc-GIS) in demarcating enumeration areas. The Arc-GIS technology enabled the use of digital based maps (Satellite images) instead of analogy-based maps. Delineation of EA boundaries were done using Global Positioning System (GPS). In addition, coordinates of prominent features existing in each particular EA were also recorded. Overall, in Tanzania Mainland 100,034 EAs were delineated (35,650 EAs in urban areas and 64,384 hamlets in rural areas).

Map 1.1: A Typical Enumeration Area Map for 2022 PHC

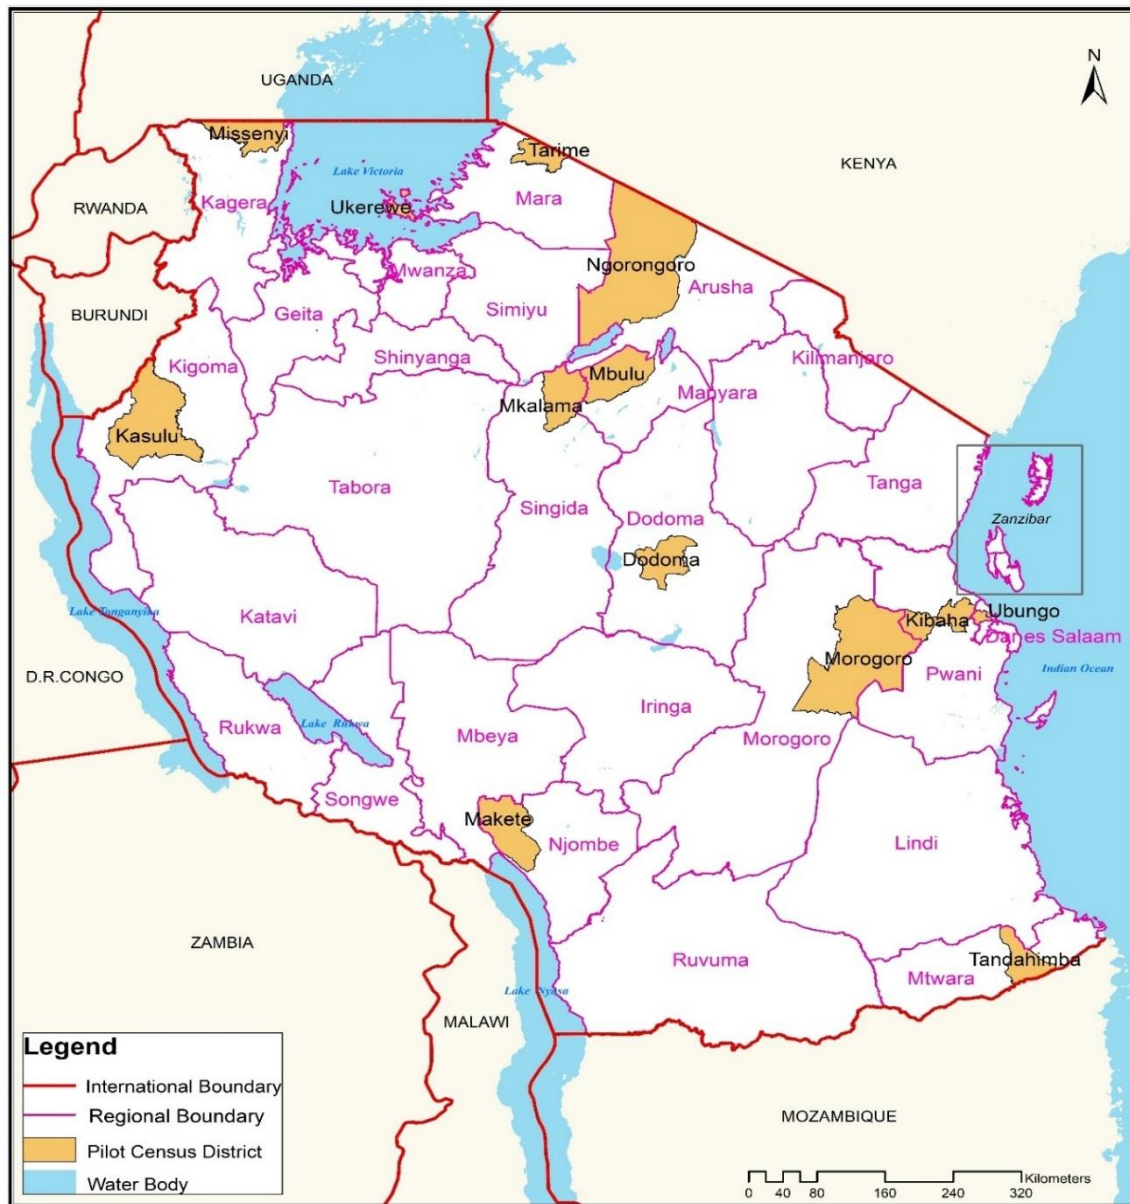

1.3.5 Pilot Census

According to the United Nations requirements and guidelines, NBS and OCGS conducted a Pilot Census in September, 2021; one year before the actual census. The main purpose of the Pilot Census was to test the effectiveness of the entire Census mechanism that would be used during implementation of the 2022 Population and Housing Census. Pilot census was conducted in 18 purposively selected regions, of which 13 were in Tanzania Mainland and five in Tanzania Zanzibar. The Experience and obtained results provided valuable

inputs which were used to improve Census instruments and logistics in the final preparations towards the 2022 Population and Housing Census enumeration.

Map 1.2: Selected Areas for the 2021 Pilot Census

1.3.6 Census Publicity and Advocacy Campaign

The 2022 PHC used intensive and extensive publicity and advocacy programmes to educate, sensitize and mobilize the public to participate in the Census process. There were two Census Commissars, one for Tanzania Mainland and the other for Tanzania Zanzibar. The main function of the Commissars was to coordinate the implementation of the Population and Housing Census Publicity and Advocacy activities. Other functions were to collaborate with committees at all administrative levels to motivate community participation

and ensure timely and sufficient availability of human and financial resources as well as equipment.

To standardize publicity and advocacy campaigns throughout the country, the NBS and OCGS developed publicity guidelines that were used during the Census publicity and advocacy operations. The guidelines explained in brief, the meaning and purpose of the Census as well as broad topics covered.

Given the importance of Census publicity, resources were availed to regional authorities for the purpose of educating, sensitizing and mobilizing the public to participate in the census in their respective areas.

Hon. Anne Semamba Makinda, The Census Commissar for Tanzania Mainland speaking to citizens of Mkalama District in Singida Region during the 2022 census publicity campaign on 07th September, 2021.

1.4 Census Enumeration Activities

Several activities were undertaken in preparation for the main enumeration exercise, including recruitment and training of field personnel and distribution of enumeration materials to all regions and districts in the country.

1.4.1 Recruitment and Training

Recruitment of census enumerators and supervisors followed procedures set by NBS and OCGS and approved by the Central Census Committee. The process was coordinated by Regional and District Census Committees in their respective administrative areas. A total of

205,000 enumerators and supervisors were recruited and trained countrywide, with 198,697 of them from Tanzania Mainland.

Training for census enumeration was conducted in three levels namely: - Training of Trainers (TOT) at national level; training of trainers at regional level; and training of supervisors and enumerators at district level. Trainings were conducted from June to August 2022 and covered theoretical and field practical trainings. The training enabled participants to conceptualize the topics covered in the Census questionnaire; build common understanding of all questions, understand techniques of asking questions and probing where necessary. Furthermore, participants were trained on the use of ICT during data collection, particularly the use of tablets to collect the required information. Trainers were provided with training manuals while supervisors and enumerators were provided with instruction manuals to be used as reference materials.

1.4.2 Other Preparations for Enumeration

A range of other preparatory activities were carried out in the second and third week of August 2022. The activities included distribution of enumeration materials to supervisors and enumerators, physical identification of EA boundaries and meeting local authorities in their respective areas. Activities at regional and district levels were coordinated by Regional and District Census Coordinators in collaboration with respective Census Committees.

1.4.3 Enumeration

The targeted population for the 2022 PHC was all persons who spent the night of 22nd/23rd August, 2022 within the borders of Tanzania. The actual enumeration was conducted by enumerators and supervisors in their respective assigned areas. Other enumerators were stationed at mass transit points (the night of 22nd/23rd) to enumerate passengers on buses, trains, airports and ships. Special enumeration cards were issued to each traveller after enumeration to avoid double-counting. Arrangements were also made to enumerate the homeless during the same night. During enumeration, enumerators were submitting data to their supervisors every day and the supervisors in turn were transferring them to the server at NBS after checking their quality.

The duration for enumeration, as per the Presidential Order, was seven days from 23rd to 29th August, 2022. Enumeration exercise was completed by 93.45 percent within the planned period of seven days. However, in some areas, enumeration could not be completed within the seven days period due to various reasons. Reasons for not completing enumeration within the allocated time included; scattered households, EAs having more

households than expected and difficult to reach EAs. Nevertheless, by the 05th September, 2022 the enumeration exercise had been completed by 99.99 percent in all EAs

H. E. Dr. Samia Suluhu Hassan, The President of the United Republic of Tanzania being enumerated at the State House, Dodoma on 23rd August, 2022.

1.4.4 Post Enumeration Activities

After enumeration, all tablets and their accessories, quality control forms and notebooks were collected for safe custody at respective Regional Census Offices from where they were transported to NBS and OCGS headquarters for further logistics.

1.5 Data Processing

The whole process of compilation of basic counts and data analysis was completed in 45 days after completion of the enumeration exercise. Initial results of the 2022 PHC at National level were released in Dodoma by H.E. Dr. Samia Suluhu Hassan, the President of the United Republic of Tanzania on 30th October, 2022.

1.6 Quality Control Procedures

Quality control is an essential component of the Census undertaking. Quality control standards and procedures were developed and observed throughout all steps of the census undertaking to ensure collection of quality data. All supervisors and coordinators were trained on quality control standards and procedures during training sessions of the census.

CHAPTER TWO

Population Size, Growth and Distribution

Key Points

- Tanzania Mainland has a population of 59,851,347 persons; (29,137,638 males and 30,713,709 females).
- Tanzania Mainland population grew at an average annual growth rate of 3.2 percent between 2012 and 2022. At this rate, Tanzanian Mainland population is expected to double in the next 22 years that is in year 2044.
- The annual growth rate in Tanzania Mainland varies across regions, ranging from 1.3 percent in Kilimanjaro to 7.1 percent in Katavi for the 2012-2022 period.
- Tanzania Mainland population remains predominantly rural, with 65.6 percent of its total population living in rural areas and 34.4 percent living in urban areas.

2.1 Introduction

This chapter presents information on population size, distribution by place of residence and sex, population growth and the annual average intercensal growth rates in Tanzania Mainland. Population size is the first demographic fact that any population census intends to obtain. Determining population size is important for planning, monitoring and establishing required resources for socio-economic development of any country. The growth and distribution of the population determines the demand for and location of essential social services, such as education, health, water, transport and housing. Therefore, understanding population size, growth and distribution is important for decision makers, planners, researchers, implementers of development programmes and the public in general. These statistics facilitate making evidence-based decisions, optimal resource allocation, planning, monitoring and evaluation of development frameworks.

2.2 Population Size and Growth

Tanzania Mainland has a population of 59,851,347 persons which is 96.9 percent of the total population of Tanzania; slightly above fifty percent (51.3%) of this population is females (30,713,709 persons) and 48.7 percent (29,137,638 persons) is males, (Table 2.1).

2.2.1 Population Change

The population of Tanzania Mainland has increased by 37.2 percent from 43,625,354 persons in 2012 to 59,851,347 persons in 2022 compared with 30.4 percent increase over the 2002 to 2012 period (Table 2.1). This is an indication of increasing population growth rate over the two decades.

2.2.2 Annual Population Growth Rate and Trends

Tanzania Mainland population grew at an annual growth rate of 3.2 percent between 2012 and 2022 (Table 2.1). According to Population Reference Bureau data sheet (www.interactives.prb.org/2022-wpds) this rate is relatively high even by African standards which stand at an average of 2.4 percent annually. At this rate, Tanzania Mainland population is expected to double in the next 22 years which is six years before the expected doubling time for African countries. The average annual population growth rate of Tanzania Mainland increased from 2.7 percent during the 2002-2012 intercensal period to 3.2 percent during the 2012-2022 period.

Table 2.1: Population Size and Growth Indicators by Administrative Units and Sex; Tanzania Mainland, 2002, 2012 and 2022 PHCs

Administrative Unit	Population Size		Percentage Change 2002-2012	Percentage Change 2012-2022	Growth Rate (per annum) 2002-2012 (Percentage)	Growth Rate (per annum) 2012-2022 (Percentage)	Doubling Time from 2022 (Years)
	2012	2022					
Tanzania Mainland	43,625,354	59,851,347	30.4	37.2	2.7	3.2	22
Male	21,239,313	29,137,638	29.9	37.2			
Female	22,386,041	30,713,709	30.8	37.2			

Figure 2.1 shows that the trend of the Tanzania Mainland population average annual intercensal growth rate has remained above the Africa's average of 2.4¹ percent since 1967. However, the rate has no clear trend declining 1967-1978 to 2.7 percent in 2002 - 2012, then increased to 3.2 percent in 2012 - 2022.

¹ Population World Datasheet 2022 (www.interactives.prb.org/2022-wpds)

Figure 2.1: Average Annual Inter-Censal Population Growth Rates; Tanzania Mainland, 1967–2022 Censuses

2.3 Regional Population Size and Growth

Administratively, Tanzania Mainland has 26 regions. Table 2.2 presents regional population size from 2002 to 2022 Censuses, annual growth rates and doubling time by area of residence in 2002 – 2012 and 2012 – 2022 intercensal periods.

2.3.1 Regional Population Change

All regions in Tanzania Mainland recorded population increase for the periods of 2002 – 2012 and 2012 – 2022 although at different rates. The highest population increase between 2012 – 2022 was recorded in Katavi Region with more than doubled population from 564,604 in 2012 to 1,152,958 in 2022. On the other hand, Kilimanjaro Region has the lowest population increase of 13.5 percent for the same period (Population increased from 1,640,087 to 1,861,934) (Table 2.2).

2.3.2 Regional Population Annual Growth Rates

Regional average annual intercensal population growth rates for the period 2012-2022 varies across regions ranging from 1.3 percent for Kilimanjaro to 7.1 percent for Katavi. Pwani is the second region with a relatively high increase of growth rate for the period of 2012 – 2022; the rate increased from 2.2 to 6.1 percent (Table 2.2).

Only 7 out of 26 regions had a decrease in annual average population growth rate between 2012 - 2022. These are Dar es Salaam (from 5.6 to 2.1%), Kagera (from 3.2 to 2.0%), Kigoma (from 2.4 to 1.5%), Mwanza (from 3.0 to 2.9%), Manyara (from 3.2 to 2.8%), Kilimanjaro (from 1.8 to 1.3%) and Songwe (from 3.2 to 3.0%).

The relatively sharp decline of growth rate for Dar es Salaam may be explained by the movement of a large number of public servants from Dar es Salaam to Dodoma following the Government's directive to implement its decision of moving the Government Headquarters to Dodoma in 2015. The growth of Pwani as a fast-growing industrial hub has most likely attracted many workers and their families from Dar es Salaam.

Table 2. 2: Population Size and Growth Indicators by Place of Residence and Region; Tanzania Mainland, 2002, 2012 and 2022 PHCs

Region	Population Size			Percentage Change		Growth Rate per Annum		Doubling Time
	2002	2012	2022	2002-2012	2012-2022	2002-2012	2012-2022	2012-2022
Tanzania Mainland	33,461,849	43,625,354	59,851,347	30.4	37.2	2.7	3.2	22
Rural	25,907,011	30,924,116	39,232,999	19.4	26.9	1.8	2.4	29

Arusha	1,288,088	1,694,310	2,356,255	31.5	39.1	2.7	3.3	21
Kilimanjaro	1,376,702	1,640,087	1,861,934	19.1	13.5	1.8	1.3	53
Tanga	1,636,280	2,045,205	2,615,597	25.0	27.9	2.2	2.5	28
Morogoro	1,753,362	2,218,492	3,197,104	26.5	44.1	2.4	3.7	19
Pwani	885,017	1,098,668	2,024,947	24.1	84.3	2.2	6.1	11
Dar es Salaam	2,487,288	4,364,541	5,383,728	75.5	23.4	5.6	2.1	33
Lindi	787,624	864,652	1,194,028	9.8	38.1	0.9	3.2	22
Mtwara	1,124,481	1,270,854	1,634,947	13.0	28.6	1.2	2.5	28
Ruvuma	1,113,715	1,376,891	1,848,794	23.6	34.3	2.1	2.9	24
Iringa	837,847	941,238	1,192,728	12.3	26.7	1.2	2.4	29
Mbeya	1,339,848	1,708,548	2,343,754	27.5	37.2	2.4	3.2	22
Singida	1,086,748	1,370,637	2,008,058	26.1	46.5	2.3	3.8	18
Tabora	1,710,465	2,291,623	3,391,679	34.0	48.0	2.9	3.9	18
Rukwa	725,902	1,004,539	1,540,519	38.4	53.4	3.2	4.3	16
Kigoma	1,674,047	2,127,930	2,470,967	27.1	16.1	2.4	1.5	46
Shinyanga	1,245,112	1,534,808	2,241,299	23.3	46.0	2.1	3.8	18
Kagera	1,777,823	2,458,023	2,989,299	38.3	21.6	3.2	2.0	35
Mwanza	2,049,917	2,772,509	3,699,872	35.2	33.4	3.0	2.9	24
Mara	1,363,397	1,743,830	2,372,015	27.9	36.0	2.5	3.1	22
Manyara	1,037,605	1,425,131	1,892,502	37.3	32.8	3.2	2.8	25
Njombe	653,045	702,097	889,946	7.5	26.8	0.7	2.4	29
Katavi	410,452	564,604	1,152,958	37.6	104.2	3.2	7.1	10
Simiyu	1,326,869	1,584,157	2,140,497	19.4	35.1	1.8	3.0	23
Geita	1,354,710	1,739,530	2,977,608	28.4	71.2	2.5	5.4	13
Songwe	723,480	998,862	1,344,687	38.1	34.6	3.2	3.0	23

Ten regions have average annual intercensal population growth rates above the Tanzania Mainland average of 3.2 percent for the 2012 - 2022 period (Figure 2.2).

Figure 2. 2: Average Annual Intercensal Population Growth Rates by Region, Tanzania Mainland 2002–2012 PHCs

2.4: Population Distribution by Region

Dar es Salaam Region in Tanzania Mainland has the largest population of 5.4 million persons when compared with other regions. Other four most populated regions are Mwanza, Morogoro, Tabora, and Dodoma. Almost one third (31.3 percent) of the total population in Tanzania Mainland live in these five regions with 9.0 percent living in Dar es Salaam alone. On the other hand, Njombe with a population of 889,946 persons is the least populated region in Tanzania Mainland (Table 2.3).

2.4.1 Rural and Urban Population

Tanzania Mainland population is predominantly rural, with 65.6 percent of its population living in rural areas and 34.4 percent living in urban areas. Population living in urban areas has increased from 29.2 percent in 2002² to 34.4 percent in 2022. The increase is mainly caused by rural-urban migration, but it is also a result of reclassification of some areas from rural to urban status (Table 2.3).

Dar es Salaam is the most urbanised region in Tanzania Mainland with 100 percent of its population living in urban areas. The percentage of urban population for other regions ranges from 11.2 percent in Kagera to 41.3 percent in Pwani (Table 2.3).

“-“ Not Applicable

Table 2. 3: Number and Percentage Distribution of Population by Place of Residence and Region; Tanzania Mainland, 2022 PHC

Region	Total				Rural				Urban			
	Population	Percent	Male	Female	Population	Percent	Male	Female	Population	Percent	Male	Female

CHAPTER THREE

Age and Sex Profile

Key Points

- About 43 percent of the Tanzania Mainland population is aged below 15 years
- The median age of the Tanzanian Mainland population is 18 years.
- The percentage of the working age population (15 - 64 years) in Tanzania Mainland increased from 49.9 percent in 1988 Census to 53.4 percent in 2022.
- About six percent (5.7%) and 4 percent (3.8%) of the population in Tanzania Mainland is aged 60 and 65 years and above respectively.
- The age dependency ratio for Tanzania Mainland is 87.

3.1 Introduction

This chapter discusses the quality of age and sex data, presents age and sex profiles as well as population distribution by selected age groups and respective demographic attributes. The Tanzania 2022 Population and Housing Census (2022 PHC) collected information on age in completed years for all persons who spent the census night in the country. Age and sex are the most fundamental demographic characteristics of human populations. They are important variables in the study of population dynamics, demographic analysis, social functions and responsibilities and in socio-economic development processes.

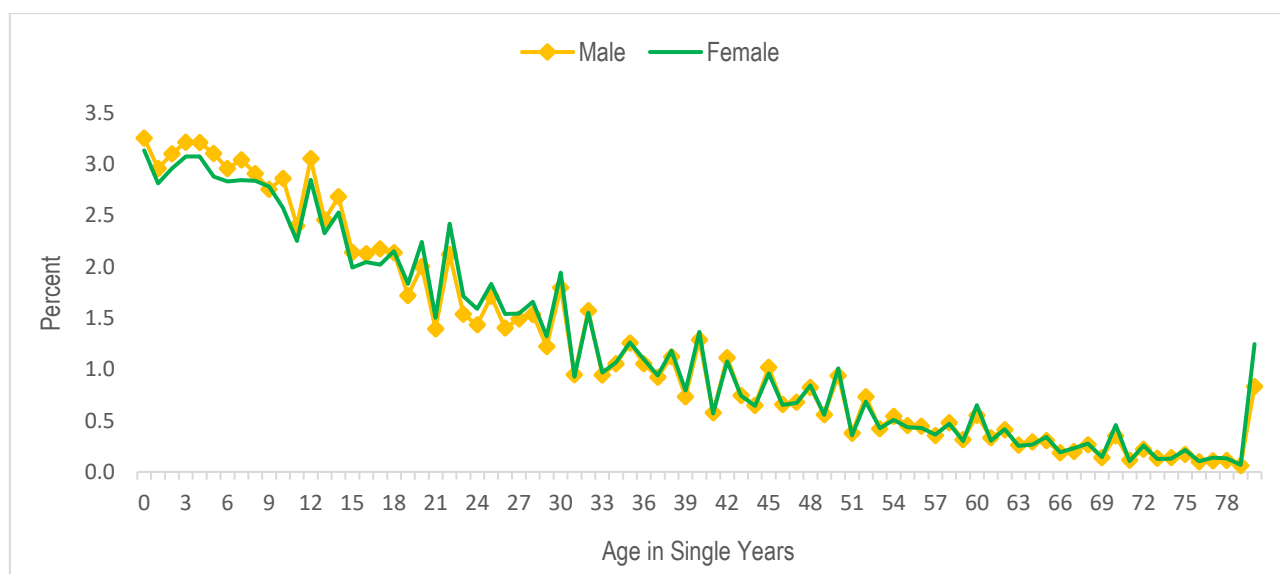

Age, in particular, is an important variable for planning and making important decisions in public administration for different population groups. For instance, age is used as an important input in population projections and for planning of social economic development including provision of health care, education, food security and energy. However, despite its importance, the results from previous censuses and the experience from most developing countries, show that age and sex information can be affected by misreporting.

3.2 Quality of Age and Sex Data

The quality of age and sex data in the 2022 PHC was examined using an array of conventional methods and indices and was observed to have suffered errors associated with age misreporting which cannot be neglected. Based on experience gained from previous censuses, age data are characterized by a significant clustering at ages ending in digits “0”, “5” and “8” and to a lesser extent to ages ending with even numbers, with corresponding deficiencies at ages ending in digits “1”, “3”, “7” or “9”. The tendency of respondents to report ages ending with certain digits at the expense of other digits is called age heaping, age preference or digit preference. Age misreporting is most pronounced among populations or population sub-groups with no birth registration system or low literacy rates.

The 2022 Census results show a significant heaping in ages ending with digits “0”, “2” and “8”, and avoidance of ages ending with digits “1”, “3”, and “9”. There is clear indication that, age misreporting for digit 5 is insignificant. This might be due to improved data collection techniques used in the 2022 Census specifically use of tablets, improved probing of age data and the use of National Identification Cards during enumeration to reconfirm the stated ages. The observed jagged edged pattern is a typical feature of single-year age distributions in most developing countries’ census data depicting age misstatements. Digit preference is observed to be relatively higher among females than males (Figure 3.1).

Figure 3. 1: Percentage Distribution of Population by Age in Single Years and Sex; Tanzania Mainland, 2022 PHC

3.3.1 Population Distribution by Five Year Age Groups

Tables 3.1, 3.2 and 3.3 present the distribution of population by five-year age groups and sex. The data depict a young population age structure with 42.8 percent of the population aged below 15 years and 3.8 percent aged 65 years and above. The median age of the Tanzania Mainland population is 18 years. The results also portray a higher number of females than males in almost all age groups.

Sex ratio by age groups provides an important index of possible age misreporting. Under normal circumstances, the general trend of sex ratio is a gradual decrease with age, eventually falling below 100, whereby the number of females begins to exceed the number of males and the difference grows larger with advancing ages. The overall sex ratio for Tanzania Mainland is 95 males for every 100 females (96 for Tanzania Mainland Rural and 92 for Tanzania Mainland Urban) indicating more females than males. The sex ratio of the population aged 10 - 14 and 15 - 19 years in rural areas is relatively high (100 to 105 boys per 100 girls). On the other hand, the sex ratio of the population of the same age in urban areas is relatively low (85 to 97 boys per 100 girls). This indicates that there may be an early out migration of girls from rural to urban areas.

3.3.2 Population Pyramid

A population pyramid is a graphical representation of the age and sex composition of a specific population. It provides a snapshot of the population's age and sex structure. It also provides useful insights into the patterns of vital events (birth and death rates). The pyramid of Tanzania Mainland as per the 2022 PHC has a broad base indicative of high fertility and a youthful age structure, with a large proportion of its population in the young and/or youthful ages (Figures 3.2 to 3.5). This is a typical population structure of many countries in Sub-Saharan Africa.

However, pyramids for a major urban centre may have a different structure. For example, the pyramid for Dar es Salaam (Figure 3.5) which is a major commercial city in Tanzania Mainland shows a bulge in age group 20 – 29, an indication of youth in-migration from other regions.

Figure 3. 2: Population Pyramid for Five Year Age Groups; Tanzania Mainland, 2022 PHC

Figure 3. 3: Population Pyramid for Five Year Age Groups; Tanzania Mainland Rural, 2022 PHC

Figure 3. 4: Population Pyramid for Five Year Age Groups; Tanzania Mainland Urban, 2022 PHC

Figure 3. 5: Population Pyramid for Five Year Age Groups; Dar es Salaam Region, Tanzania, 2022 PHC

3.4 Population Distribution by Selected Age Groups

The 2022 PHC reveals a young population with 42.8 percent of the total population below 15 years of age and 3.8 percent of the population aged 65 years and above (Table 3.4). The broad-based structure of the population is a common phenomenon in many developing countries. It is an indication of a development stage where a country succeeds in reducing infant mortality while fertility remains high.

Table 3. 4: Number and Percentage of Population by Selected Age Groups and Sex; Tanzania Mainland, 2022 PHC

Age Group	Total		Rural		Urban

3.4.1 Children Under Five Years

About 15 percent (15.4%) of the total population in Tanzania Mainland is aged below five years. The percentage of population under five years in Tanzania Mainland has slightly declined from 16.5 percent in 2002 to 15.4 percent in 2022. This moderate decline indicates a slow pace of fertility decline in the region during the specified period (Figure 3.6)

Figure 3. 6: Percentage of Children Under Five Years; Tanzania Mainland, 2002, 2012 and 2022 PHCs

3.4.2 Young Population (0-14 Years)

Tanzania Mainland's population is characterised by a young age structure, with 42.8 percent of the total population below 15 years of age. Figure 3.7 shows that the percentage of population below 15 years of age has slightly decreased from 44.2 percent in 2002 to 42.8 percent in 2022.

Figure 3. 7: Percentage of Young Population (0-14 Years); Tanzania Mainland, 2002, 2012 and 2022 PHCs

3.4.3 Young Population (0-17 Years)

About 50 percent (49.1%) of the total Tanzania Mainland population is below 18 years of age. Figure 3.8 shows that in Tanzania Mainland 49.1 percent of the population in Tanzania Mainland is below 18 years. This percentage has remained at around 50 percent in both 2002 and 2022 Censuses, slightly decreased declined from 50.6 percent in 2002 to 49.1 percent in 2022 (Figure 3.8).

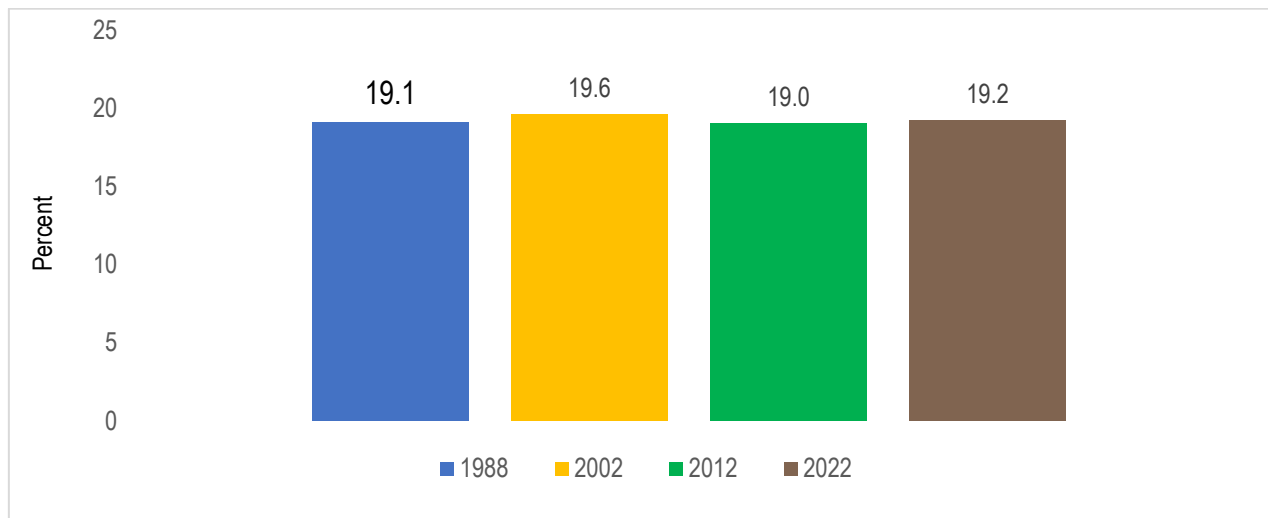

Figure 3. 8: Percentage of Young Population Aged 0-17 Years; Tanzania Mainland, 2002, 2012 and 2022 PHCs

3.4.4 Youth Population (15-24 Years)

The 2007 National Youth Development Policy of Tanzania defines youth as a person aged 15 – 35 years. However, according to the United Nations, a youth is defined as a person aged 15 - 24 years.

Figure 3.9 presents the youth population (15 – 24 years) for Tanzania Mainland from 1988 to 2022 Censuses. Results for 2022 PHC show that 19.2 percent of the total population of Tanzania Mainland is youth aged 15 – 24 years. The percentage of youth population (15-24 years) in Tanzania Mainland has remained almost the same during the 1988 - 2022 period (19.1% in 1988, 19.6 in 2002, 19.0 in 2012 and 19.2 in 2022).

Figure 3. 9: Percentage of Youth Population (15-24 Years); Tanzania Mainland, 1988, 2002, 2012 and 2022 PHCs

3.4.5 Youth Population (15 - 35 Years)

The 2022 PHC results show that the percentage of persons aged 15-35 years has remained almost the same, decreasing slightly from 35.6 in 2002 to 34.4 percent in 2022 (Figure 3.10).

Figure 3. 10: Percentage of the Youth Population (15-35 Years); Tanzania Mainland, 2002, 2012 and 2022 PHCs

3.4.6 Working Age Population (15-64 Years)

The percentage of the Tanzania Mainland's working age population (15 - 64 years) increased slightly from 51.9 percent in 1988 Census to 53.4 percent in 2022 (Figure 3.11).

Figure 3. 11: Percentage of the Working Age Population (15-64 Years); Tanzania Mainland, 1988, 2002, 2012 and 2022 PHCs

3.4.7 Elderly Population

According to the international definition, elderly is a person aged 65 years and above. However, according to the Tanzania National Ageing Policy of 2003, elderly is a person aged 60 years and above. In this chapter the analysis has taken into account both definitions.

3.4.7.1 Population Aged 60 Years and Above

Findings indicate that, the elderly constitute a small segment of Tanzania's Mainland population. The percentage of the population aged 60 years and above is 5.7 percent. The percentage of the elderly population in Tanzania Mainland remained almost the same (around 6%) in 1988, 2002, 2012 and 2022 censuses (Figure 3.12).

Figure 3. 12: Percentage of the Population Aged 60 Years or Above; Tanzania Mainland, 1988, 2002, 2012 and 2022 PHCs

3.4.7.2: Population Aged 65 Years and Above

The percentage of the elderly population aged 65 years and above in Tanzania Mainland remained almost the same over the two decades (3.9% in 2002 and 2012 and 3.8% in 2022) (Figure 3.13).

Figure 3. 13: Percentage of the Population Aged 65 Years or Above; Tanzania Mainland, 2002, 2012 and 2022 PHCs

3.4.8 Age Dependency Ratio

Age-dependency ratio is the proportion of persons in the “dependent” ages (those under 15 years of age plus those aged 65 years and above) to the “working age population” (15-64 years). It is expressed as a number of dependents per 100 persons of the working age population. Ratios higher than 100 are undesirable. The age-dependency ratio is a proxy indicator of the economic burden and responsibility borne by the working age population.

According to the 2022 PHC results, the age-dependency ratio for Tanzania Mainland is 87.4, implying that there are 87 dependents per 100 non-dependents. Results further show that the age dependency ratio in Tanzania Mainland has declined over the two decades from 100.0 in the 1988 census to 87.4 in the 2022 census (Figure 3.14).

Figure 3. 14: Age Dependency Ratio; Tanzania Mainland 1988, 2002, 2012 and 2022 PHCs

CHAPTER FOUR

Household Composition

Key points

- About 61 percent (60.7%) of all private households in Tanzania Mainland are in rural areas.
- The average household size in Tanzania Mainland is 4.3.
- There is a decline in average household size from 4.7 in 2012 to 4.3 persons in 2022 between 2012 and 2022.
- Female-headed households in Tanzania Mainland increased slightly from 33.5 in 2012 to 35.9 percent in 2022.

4.1 Introduction

This chapter presents information on private households including household composition, number of households, average household size and household headship. Although the 2022 PHC collected information from private and collective households, analysis in this chapter is based on private households only.

A private household refers to a person or group of persons living together, having the same cooking arrangements and answerable to one household head, but not necessarily in the same dwelling unit. Since the 2022 PHC enumeration was a *de facto* some modifications were made to this definition. For instance, visitors present in the household on census night were also included as members of the household. Further, usual members of the household who spent the census night elsewhere due to being on duty were included as members of the household. On the other hand, collective households are those with members not necessarily related to each other, such as students in hostels, orphanages, prisons and patients in hospital wards.

4.2 Number of Households

The 2022 PHC reveals that, Tanzania Mainland has a total of 13,776,975 private households out of which 8,355,983 (60.7 %) are in rural areas and 5,420,983 (39.3%) are in urban areas. Female headed households account for 35.9 percent of all private households. The percentage of female headed households is slightly higher in urban areas (36.9%) than in rural areas (35.3%) (Table 4.1).

Table 4.1: Number and Percentage Distribution of Private Households by Place of Residence, Sex of Head of Household and Age Group; Tanzania Mainland, 2022 PHC

³ Households headed by children under 10 years may include those households whose responsible heads were temporarily absent during the Census night

Dar es Salaam, being the region with the largest population in Tanzania Mainland, accounts for 11.2 percent of the total private households. The next four regions with relatively high contributions to the total households are Morogoro (6.0%), Dodoma (5.5%), Mwanza (5.4%) and Kagera (5.1%). On the other hand, Katavi Region has the smallest contribution of 1.6 percent followed by Njombe (1.8%) (Table 4.2).

Figure 4.1 shows an increase in urban households from 32.9 percent in 2012 to 39.3 percent in 2022 PHC, an increase of about six percentage points. Rural–urban migration and reclassification of some areas from rural to urban status in recent years may have increased level of urbanization.

Figure 4.1: Percentage Distribution of Private Households by Residence; Tanzania Mainland, 2012 and 2022 PHCs

4.3 Average Household Size

Average household size is the average number of persons in a private household. The average household size in Tanzania Mainland decreased from 4.7 in 2012 to 4.3 persons in 2022. Household in rural areas have an average of 4.6 persons per household which is relatively higher than in urban households (3.7 persons). Average household size in rural areas declined from 5.0 in 2012 to 4.6 persons and from 4.2 to 3.7 persons in urban areas between 2012 and 2022. The Average household size varies across regions, ranging from 3.3 persons in Mtwara to 6.7 persons in Simiyu (Figure 4.2 and Table 4.3).

Figure 4. 2: Average Household Size by Regions; Tanzania Mainland, 2022 Census

4.4 Household Headship

A household head is a person who is recognised as a leader by other household members. The 2022 PHC results show that, out of the total private households in Tanzania Mainland, 64.1 percent are headed by males and 35.9 percent are headed by females (Figure 4.3).

Figure 4. 3: Percentage Distribution of Households by Sex of Head and Residence; Tanzania Mainland, 2022 PHCs

The percentage of male-headed households in Tanzania Mainland decreased from 66.5 in 2012 to 64.1 in 2022 while female headed households increased from 33.5 percent to 35.9 in the same period. A similar pattern is observed across regions (Table 4.4).

Table 4. 4: Percentage Distribution of Male and Female-Headed Households by Place of Residence and Region; Tanzania Mainland, 2012 and 2022 PHCs

Place of Residence	2012		2022

4.4.1. Households Living in Improved or Unimproved Houses

This sub section discusses the relationship between household headship and the type of building materials used to build their main dwellings (houses). In this chapter, an improved house implies a house that is built using improved building materials of at least two of the following; roofing, walling and flooring materials.

In Tanzania Mainland 77.5 percent of households live in improved houses. Such households are more likely to be found in urban areas (95.4%) than in rural areas (66.0%). Differences by sex of heads of household are not significant; 77.3 percent of male headed households are living in improved houses compared with 78.0 percent of female headed households. However, regarding residence, the percentage of both male and female headed households living in improved houses is higher in urban than in rural areas; 95.3 percent of male headed households in urban areas are living in improved houses compared to 65.9 percent in rural areas and 95.4 percent of female headed households in urban areas compared to 66.2 percent in rural areas (Table 4.6).

Regions with high percentages of households living in improved houses are Dar es Salaam (99.1%), Njombe (95.8%), Mwanza (91.1%) and Geita (90.4%). On the other hand, regions with households living in unimproved houses are Lindi (48.8%), Tanga (45.2%), Manyara (44.3%) and Kagera (42.9%). A similar pattern is observed for both males and females headed households (Table 4.6).

Findings show that as age of head of household increases, the chances of living in improved house slightly decreases. Results show a clear decreasing pattern of household heads living in improved houses with age; decreasing from 80.2 percent for those aged 30-34 to 68.9 percent for those aged 80 years and above. This observation holds for both male and female headed household (Table 4.7).

4.4.2 Heads of Household by Marital Status and Occupation

Majority of male heads of household (44.7%) regardless of their marital status are engaged as agricultural and fishery workers, followed by those engaged in elementary occupations (21.3%) and craft and related workers (17.7%). Among the widowed male heads of households' 54.1 percent are engaged as agricultural and fishery workers, 21.9 percent are in elementary occupations and 15.3 percent are craft and related workers (Table 4.8).

Table 4. 8: Percentage Distribution of Male Heads of Household by Marital Status and Occupation, Tanzania Mainland 2022 PHC

Occupation	Total	Never Married	Married	Living Together	Divorced	Separated	Widowed

Forty-nine percent of female heads of household, regardless of their marital status, are engaged as agricultural and fishery workers followed by those engage in elementary occupations 23.9 percent and 15.1 percent are craft and related workers. Among the widowed female heads of households' 56.9 percent are engaged as agricultural and fishery

workers, 23.5 percent are in elementary occupations and 14.0 percent are craft and related workers.

Moreover, the majority of divorced female heads of household are in Agricultural and fishery sector (49.0%), followed by those in elementary occupations (24.7%) and craft and related workers (16.2%) (Table 4.9).

Table 4. 9: Percentage Distribution of Female Heads of Household by Marital Status and Occupation, Tanzania Mainland 2022 PHC

4.4.3 Heads of Households by Type of Toilet Facility

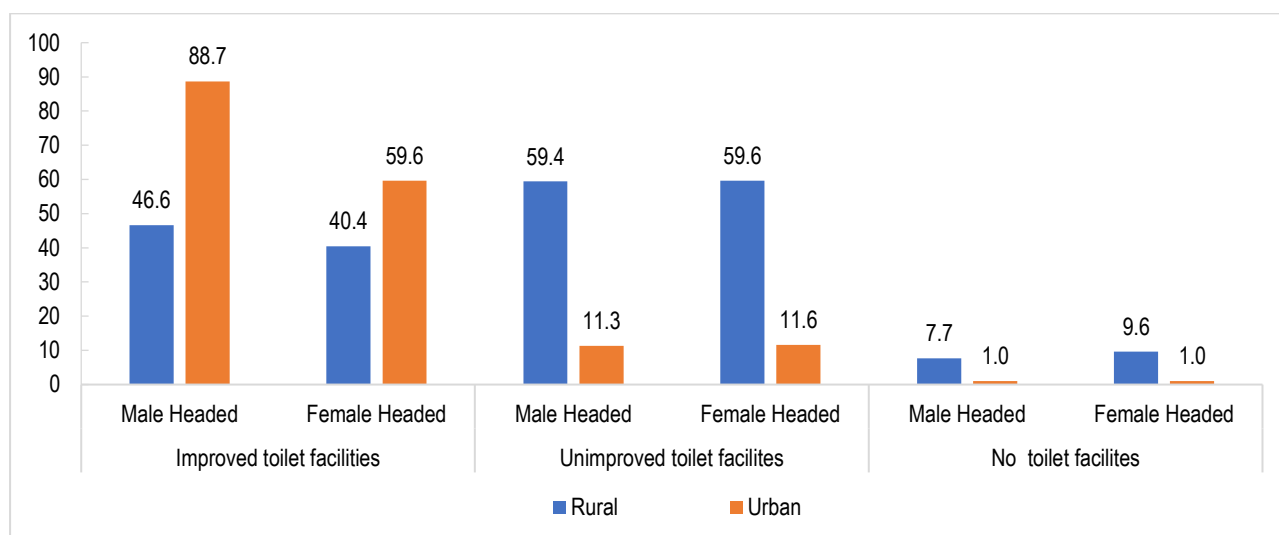

The percentage of male and female headed household using improved toilet facilities are almost the same (59.8% against 59.2% respectively). On the other hand, female headed households have slightly higher percentage (6.2%) of households with no toilet facilities than male headed households (5.1%) (Figure 4.4).

Figure 4. 4: Percentage Distribution of Households with Improved/Unimproved Toilet Facilities by Sex of Household Head, Tanzania Mainland, 2022 PHC

In urban areas male headed households are more likely to use improved toilet facilities (88.7%) than female headed household (59.6%). The same pattern is observed in rural areas (46.6% versus 40.4%). On the other hand, female headed household have a higher percentage (9.6%) of household with no toilet facilities in rural areas than male headed households (7.7%) (Figure 4.5).

Figure 4. 5: Percentage Distribution of Households with Improved/Unimproved Toilet Facilities by Sex of Household Head and Place of Residence

Across regions, Dar es Salaam has the highest percentage of both male and female headed households with improved toilet facilities (97.7% and 97.8% respectively). Other regions with relatively high percentage of male and female headed households using improved toilet facilities are Kilimanjaro (82.1% and 83.0%), Iringa (82.9% and 82.7%) and Njombe (80.4% and 80.1%).

Regions with high percentage of male headed household with no toilet facilities are Mara (14.3%), Manyara (14.2%) and Tabora (13.4%). On the other hand, regions with high percentage of female headed households with no toilet facilities are Manyara (23.0%), Arusha (20.8%) and Mara (16.7%). Female headed households are more likely to have no toilet facilities than male headed households (Table 4.10).

4.4.4 Heads of Households by Source of Drinking Water Used by the Household

The percentage of male (68.7%) headed households that use improved source of drinking water are almost the same compared with female (70.9%) headed households in Tanzania Mainland. The same situation is also observed for unimproved source of drinking water.

Also, the results show that, there is small difference between male and female headed households using improved sources of drinking water in urban areas (91.1% versus 91.5%). A similar pattern is observed in rural areas whereby the proportion of male headed households that use improved source of drinking water is 54.5 percent and that of female headed households is 56.9 percent.

The proportion of male headed households using unimproved source of drinking water (45.5%) in rural areas is slightly higher than that of female headed households (43.1%). No significant difference observed between male headed (8.9%) and female headed (8.5%) households that use unimproved sources of drinking water in urban areas (Figure 4.6).

Figure 4. 6: Percentage Distribution of Households Using Improved and Unimproved Sources of Drinking Water by Sex of Household Head and Place of Residence; Tanzania Mainland, 2022 PHC

Across regions, Dar es Salaam has the highest percentage of both male and female headed households with improved sources of drinking water (97.5% against 97.7%). Other regions with relatively high percentage of male and female headed households using improved sources of water for drinking are Kilimanjaro (92.4% versus 93.6%) and Arusha (89.2% versus 84.5%).

On the other hand, regions with high percentage of male headed households using unimproved sources of drinking water are Tabora (59.4%), Singida (54.3%) and Kagera (53.1%). Female headed households with high proportion of households using unimproved sources of water for drinking are Tabora (55.7%) Singida (50.1%) and Kagera (49.7%) (Table 4.11).

4.4.5 Household Heads with Children Under 18 Years

Results show that percentage of female headed households with one to three children under 18 years is higher (54.2%) than that of male headed households (46.3%). However, the percentage of male headed households with more than three children under 18 years is slightly higher (22.5%)

than that of female headed households (21.0%). On the other hand, the percentage of male headed households with no children under 18 years is slightly higher (31.3%) compared with that of female headed households (28.9%) (Figure 4.8).

Figure 4. 7: Percentage Distribution of Household with Children under 18 Years by Sex of Head of Household; Tanzania Mainland, 2022 PHC

Results indicate that high percentage (53.7%) of female headed households living in rural area have one to three children under 18 years and for male headed households it is 46.7 percent. The same pattern is observed in urban areas. A relatively higher percentage (27.5%) of male headed households with more than three children reside in rural areas compared to 25.6 percent of female head of households. On the other hand, more male headed households with no children under 18 years are in urban areas (40.0%) compared with 30.7 percent of female headed households (Figure 4.9 and Table 4.12).

CHAPTER FIVE

Marital Status

Key Points

- Slightly more than half (51.3%) of the population aged 15 years and above are married.
- About five percent (4.8%) of persons aged 15 years and above are widowed. The percentage of females widowed is significantly higher (8.0%) than males (1.3%).
- Nearly four percent (3.6%) of persons aged 15 years and above are divorced. More females are divorced (4.6%) than males (2.4%).
- Mean Age at First Marriage in Tanzania Mainland is 24.1 years. Females are getting married at a younger age (22.1 years) than males (26.3 years).

5.1 Introduction

This Chapter focuses on analysis of marital status and Singulate Mean Age (SMAM) at First Marriage. The term "marital status" refers to the state of being unmarried, married, widowed, separated or divorced. Marital status is one of the most important factors in population dynamics as it affects fertility and other social and economic characteristics such as school attendance and labour force participation. The information on marital status helps Government Agencies and other users to understand marriage trends and forecast future needs of programmes that have spousal benefits. It also measures the effects of policies that focus on the well-being of families, including financial assistance plans.

In the 2022 PHC the marital status questions were asked to all persons aged 10 years and above. However, in order to allow comparison of the 2022 Census results with the 2012 results, some of the analysis is also based the population aged 15 years and above. Six categories were adopted to classify marital status of persons which are: - never married, married, living together, separated, divorced and widowed. Information on marital status of the population aged 15 years and above is presented by residence, age, sex and region.

5.2 Marital Status

Table 5.1 and Figure 5.1 show that, slightly more than half (51.3%) of persons aged 15 years and above in Tanzania Mainland are married; the percentage is higher among female (52.3%) than male (50.2%).

About one third (32.8%) of persons aged 15 years and above in Tanzania Mainland are never married. The results also show notable differences between rural and urban areas for the never married persons (28.7 % in rural and 39.5% in urban areas); for the married (54.7% in rural and 45.9% in urban areas) and widowed (5.2% in rural and 4.1% in urban areas).

Results further show that, the percentage of persons aged 15 years and above who are widowed is 4.8 which is higher among females (8.0%) than males (1.3%). It is 5.2 percent in rural areas and 4.1 percent in urban areas (Table 5.1). The large number of females who are widowed compared to males might be contributed by the tendency of most males to remarry after the death of their wives. This may also be due to the fact that males are more subjected to risky tasks hence more likely to die at young ages than females. Moreover, biologically females live longer than males. However, further studies are needed to ascertain the root causes of the disparities.

Table 5. 1: Percentage Distribution of Population Aged 15 Years and Above by Place of Residence, Sex and Marital Status; Tanzania Mainland, 2022 PHC

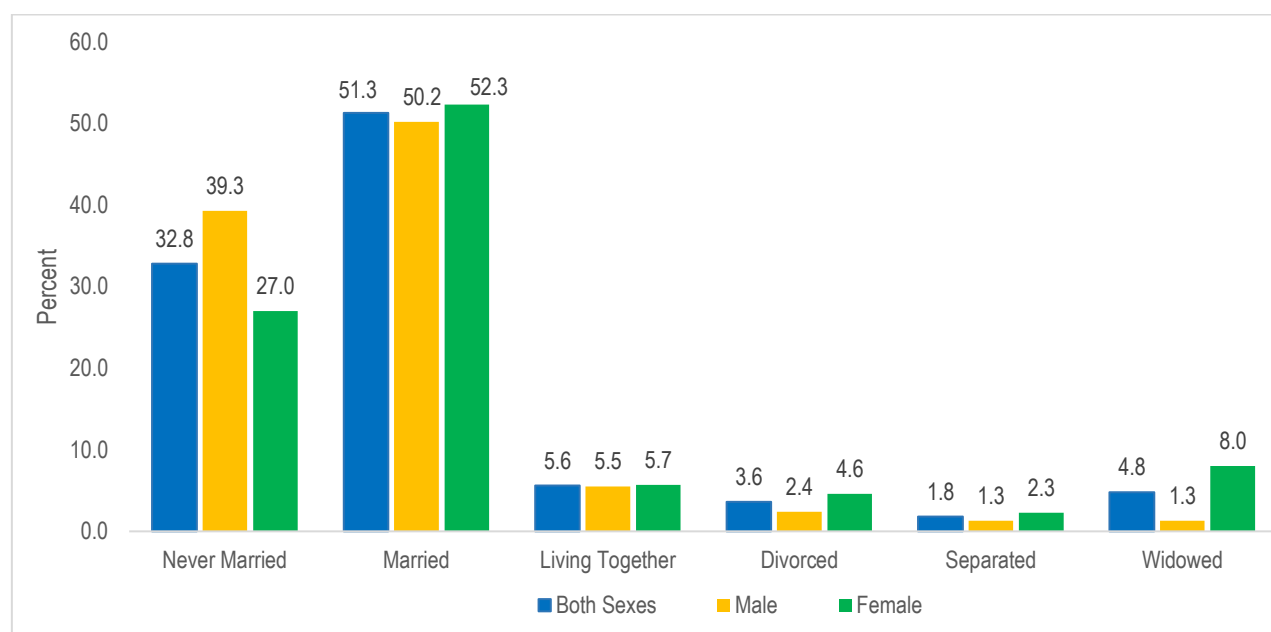

Figure 5. 1: Percentage Distribution of Population Aged 15 Years and Above by Sex and Marital Status; Tanzania Mainland, 2022 PHC

Table 5.2 shows that, percentage of married persons increases sharply with age from 9.5 percent for persons aged 15-19 years to 72.8 percent for persons aged 40 - 44 and thereafter declines gradually as age increases. Percentage of the divorced persons increase with age from 0.2 for those aged 15–19 years to 6.8 for those aged 60–64 years. Likewise, the widowed persons increase steadily as age increases.

Results show that more than half (51.0%) of the male population aged 10 years and above are never married, 40.5 percent are married and 4.4 percent are living together. Almost all male children (99.9%) aged 10 - 14 years and 97.7 percent of those aged 15 -19 are never married. As expected, the percentage of never married persons decreases as age increases (Table 5.3).

5.2.1 Marital Status for Selected Age Groups

Table 5.5 shows the percentage of population by marital status for selected age groups. Results reveal that the percentage of married persons aged 15-64 years in Tanzania Mainland is 51.5 while for age group 65 years and above is 49.1 percent. Results further show that by age 65 only 3.7 percent of the population are still single implying that marriage in Tanzania Mainland is almost universal. There is a relatively high proportion (5.6%) of people living together in age groups 15 – 35.

Table 5. 5: Percentage Distribution of Population Aged 10 Years and Above by Marital Status and Selected Age Groups; Tanzania Mainland, 2022 PHC

Selected Age Group	Total	Marital Status					
	Population	Never Married	Married	Living Together	Divorced	Separated	Widowed
Tanzania Mainland

5.2.2 Marital Status by Region

Table 5.8 highlights the regional variations of marital status for the persons aged 15 years and above. Songwe Region has the highest proportion (62.0%) of persons aged 15 years and above who are married while Dar es Salaam has the lowest (43.3%). The proportion of widowed is highest (7.5%) in Njombe Region and is lowest in Dar es Salaam (3.3%). Other regions with over five percent of the widowed are Kagera, Singida, Songwe, Dodoma, Tanga, Mara, Mbeya, Kilimanjaro and Iringa.

Table 5. 8: Percentage Distribution of Population Aged 15 Years and Above by Marital Status, Place of Residence and Region; Tanzania Mainland, 2022 PHC

5.2.3 Marital Status by Intercensal Period

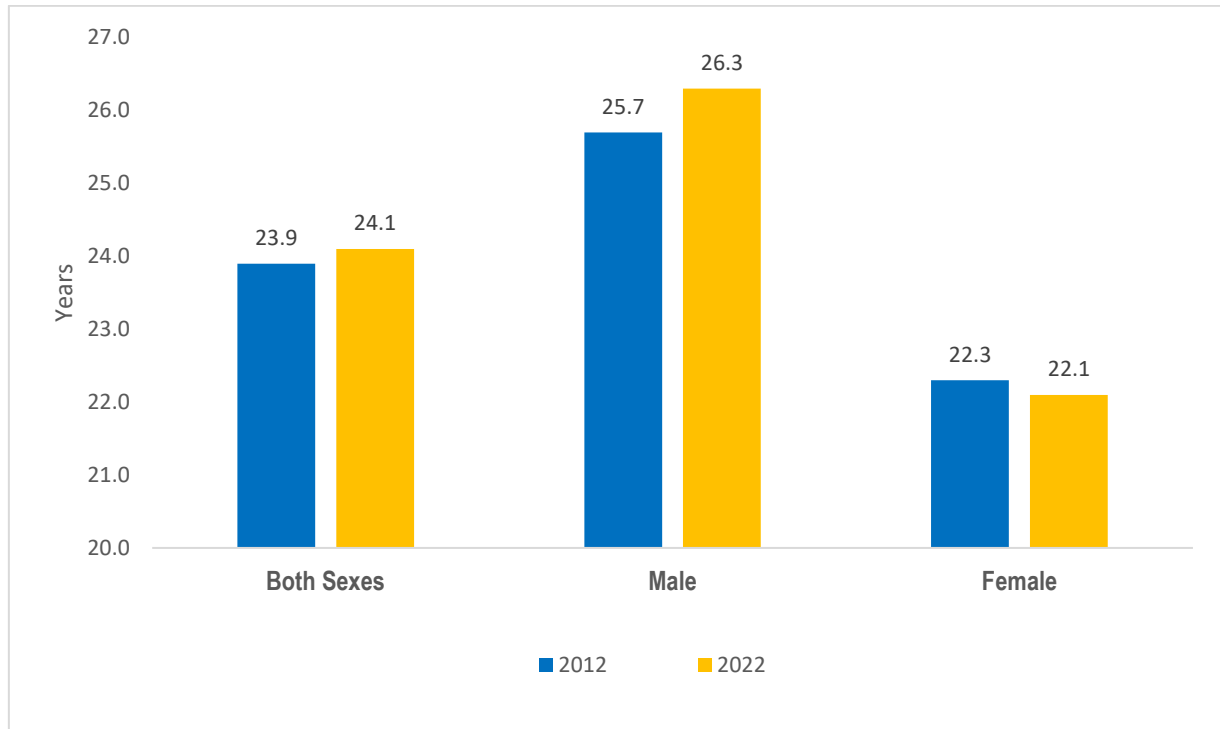

Figure 5.2 presents comparison of marital status of persons aged 15 years and above for the 2012 and 2022 Censuses. The results show a decrease in the percentage of persons in the categories of never married from 35.5 in 2012 to 32.9 in 2022. On the other hand, the percentage of persons in the category of divorced increased from 0.9 in 2012 to 3.7 in 2022 and for the widowed the increase is from 3.1 to 4.7 percent over the same period.

Figure 5. 2: Percent of Population Aged 15 Years and Above by Marital Status; Tanzania Mainland, 2012 and 2022 PHCs.

5.3 Mean Age at First Marriage

The Mean Age at First Marriage (MAFM) which is defined as the average length of single life (before marriage) expressed in years among those who marry before age 50, is one of the proxy determinants of fertility. The mean age at first marriage is estimated using the Singulate Mean Age at First Marriage (SMAM). A population with a low age at first marriage tends to have early childbearing and high fertility.

Figure 5.3 shows that in Tanzania Mainland, the MAFM for females slightly decreased from 22.3 years in 2012 to 22.1 years in 2022, and slightly increases for males from 25.7 years in 2012 to 26.3 years in 2022. An increase in age at first marriage in Tanzania Mainland for both males and females is probably due to an increased enrolment in primary and secondary schools among girls and boys.

Figure 5. 3: Mean Age at First Marriage by Sex; Tanzania Mainland, 2012 and 2022 PHC

5.3.1 Mean Age at First Marriage by Region

Dar es Salaam has the highest MAFM for both males (29.2 years) and females (25.7 years), followed by Kilimanjaro (29.0 years for males and 24.5 years for females) The region with the lowest MAFM for females is Katavi (19.7 years) and for males it is Rukwa (23.8 years) (Figure 5.4 and Table 5.9).

CHAPTER SIX

National Identification Documents and Citizenship

Key Points

- About 69 percent (69.3%) of the population in Tanzania Mainland have neither birth certificate nor birth notifications.
- About 46 percent of under-five population have birth certificates.
- About 22 percent (22.4%) of persons aged 18 years and above have national identification cards and 13.7 percent have national identification numbers.
- Seven percent of all persons in Tanzania Mainland have health insurance from national health insurance fund (NHIF) or community health insurance fund (CHIF).

6.1 Introduction

This chapter presents information on possession of national identification documents which includes birth certificate and notification, national identification card (NIDA), Zanzibar identification card (ZAN ID), driving license, voter's ID, travel passport and small entrepreneur ID. The objective of national identification documents is to help the eligible citizen to access various services including financial, health and education.

6.2 National Identification Documents

A national identification document is any document that may be used to prove a person's identity such as the bearer's full name, birth date, address, an identification number, card number, sex, citizenship and more. If issued in a small, standard smart card size, it is usually called an identity card or citizen card. Alternatively, it is issued in other formats such as Tanzania travel permit or passport. A national document to be valid should be issued by a specified official authority.

6.2.1 Birth Certificate

A birth certificate is a vital record that documents the birth of a child. The term "birth certificate" can refer to either the original document certifying the circumstances of the birth or to a certified copy or a representation of the ensuing registration of that birth.

In the 2022 PHC, data on birth certificates was collected from all respondents regardless of their age. Results show that, in Tanzania Mainland 27.3 percent of the population has birth certificates while most of the population (68.6%) have neither birth certificates nor birth notifications. The percentage of population with birth certificates is larger (41.6%) in urban than in rural areas (19.9%) On the other hand, 43.3 percent of males and 39.9 percent of females living in urban areas have birth certificates compared with 20.7 percent and 19.2 percent respectively for males and females living in rural areas (Tables 6.2 and 6.3).

There is a declining percentage of population with birth certificates from younger to older age groups. It is highest for age group 0 - 4 years (45.7%) followed by age group 5 - 9 years (41.8%). This indicates that there is a significant improvement in birth registration in recent years. Results further show that there are proportionately more males with birth certificates than their female counterparts (28.3% and 26.4% respectively) (Table 6.1).

6.2.2 Birth Notification

Birth notification is a document issued by a health facility to confirm the occurrence of birth. It is an initial document in the process of registering a child's birth. It provides the first legal recognition of the child and is generally required for the child to obtain a birth certificate and other legal documents and rights. The results show that, in Tanzania Mainland 3.0 percent of the population have birth notifications (Table 6.1 and Figure 6.1).

6.2.2.1 Birth Certificates by Regions

Table 6.4 indicates that there are significant differences with percentage of population with birth certificates across regions in Tanzania Mainland. The region with the highest percentage of population with birth certificates is Dar es Salaam (52.3%) and the lowest are Katavi and Kigoma (11.5% each). Other regions with relatively high percentages (above 30%) of population with birth certificates are Mara (31.4%), Pwani (32.0%), Mbeya (32.5%), Njombe (35.1%), Arusha (35.7%), Kilimanjaro (38.8%), and Iringa (39.7%).

6.2.3 Other National Identification Documents

Tanzania Population and Housing Census 2022 collected information on travel passport, national health /community health insurance and other health insurance from all persons regardless of their age. On the other hand, information on national identification card, national identification number, Zanzibar identification card, driving license and voters' identification card were collected for all persons aged 18 years and above. In addition, persons aged 15 years and above provided information on possession of small entrepreneur identification card and those aged 60 years and above provided information on whether they had exempted elderly treatment card.

6.2.3.1 National Identification Cards

Table 6.5 indicates that 6.6 million persons (22.2%) aged 18 years and above in Tanzania Mainland have national identification cards while 4.0 million (13.7%) have only national identification numbers. Further, results show that, there are more persons in urban areas

(3.5 million (30.6%) with national identification cards than in rural areas (3.1 million (16.9%) persons). About 15 percent (14.6%) equivalent of 1.7 million in urban areas have national identification numbers compared to 2.4 million (13.2%) in rural areas. Results further reveal that 19.0 million persons (63.7%) have voters' identification cards in Tanzania Mainland.

6.2.3.2 Health Insurance

Table 6.6 indicates that 4.1 million (7.0%) out of 58.8 million persons in Tanzania Mainland have health insurance from National Health Insurance Fund (NHIF) or Community Health Insurance Fund (CHIF). In addition, there are 691,294 (1.2%) persons with health insurance from other health insurers.

Further, results show that in Tanzania Mainland 1.7 million (4.5%) persons in rural areas have NHIF/CHIF insurance while in urban areas the service covers 2.4 million (11.9%) persons. On the other hand, 370,672 (1.0%) persons in rural areas have other health insurance compared with 320,622 (1.6%) persons in urban areas.

Dar es Salaam Region has a large number of persons who possess NHIF/CHIF cards (788,932 persons; 14.8%), followed by Dodoma Region with 306,844 persons (10.0%). The results also indicate that, a total of 478,200 persons (14.2%) aged 60 years and above have exempted elderly treatment cards. The population with such cards is larger in rural areas (342,061 persons) compared with urban areas (136,139 persons).

6.3 Citizenship

The Tanzania citizenship is governed by the Tanzania Citizenship Act, Chapter 357 (Revised Edition of 2002) and its Regulations of 1997. The 2022 PHC collected information on citizenship status. Results show that 99.8 percent of the enumerated persons are Tanzanians. The majority of non-Tanzanians are from neighbouring countries of Burundi (107,826 persons) and Democratic Republic of Congo (53,235 persons). Other African

countries which had more than 3,000 of their citizens enumerated in Tanzania Mainland during the 2022 PHC included Rwanda, Madagascar, Kenya, Malawi, Uganda and Mozambique.

Saudi Arabia and India in the Middle East and other Asia countries had a relatively large number (over 9,000 persons each) of non-Tanzanians enumerated in 2022 PHC. Furthermore, Germany, the United Kingdom and United States of America from Western countries had more than 1,500 each of their citizens enumerated in Tanzania Mainland during the 2022 PHC (Table 6.7).

CHAPTER SEVEN

Survival of Parents

Key Points

- About seven percent (7.1%) of children under 18 years have one parent dead.
- More than three percent (3.4%) of all children under 18 years have both parents dead.
- About ten percent (10.5%) of all children under 18 years are orphans.
- Children under 18 years with their fathers dead are almost three times (5.3%) of those with their mothers dead (1.8%).

7.1 Introduction

This Chapter presents information on survival of parents at national and regional levels. The information helps to determine the extent of orphanhood in a society and for making evidence-based decisions. In Tanzania, an orphan is defined as a child under age 18 years who has lost one or both parents⁴. This definition is consistent with the United Nation definition. Information on survival of parents was collected from all children under 18 years with respect to a child's biological parents and not adopting or fostering parents.

The death of parents has a significant negative impact on the wellbeing and survival of young children, especially those who are young and most vulnerable (under 5 years old). The death of a mother, if other factors remain unchanged, has a much more negative impact and is associated with a 2 to 50 times increased risk of death among the under-5 children left behind⁵. Orphans with no family or community support face risky life situations including:

- having no social network of families; lacking food and healthcare and sometimes having to assume the role of heads of households and taking care of their younger siblings.

⁴ The law of Child Act Cap 56, 2019

⁵ Hani K. Atrash, M.D., M.P.H.1, Parents' Death and its Implications for Child Survival 2011; 21(3): 759–770.

7.2 Survival of Parents

Results indicate that 89.5 percent of all children under 18 years in Tanzania Mainland have both parents alive. The percentage of children with both parents' alive decreases with increasing age of children from 89.5 percent for children under one year to 83.0 percent for children aged 17. In addition, the patterns of survival of parents are similar for both male and female children (Tables 7.2 and 7.3).

7.2.1 Survival of Parents by Region

Table 7.4 shows that in Tanzania Mainland, Dodoma Region has 91.6 percent of children under 18 years with both parents alive, followed by Tanga Region (91.5%) and Dar es Salaam (91.4%). The least proportion was observed in Kigoma Region with 81.2 percent followed by Mara (87.4%) and Katavi (87.8%) (Table 7.4).

7.3 Orphanhood

The Results further show that, the percentage of orphans in Tanzania Mainland is 10.5 (5.3 percent father dead but mother alive, 1.8 percent mother dead and father alive and 3.4 percent have both parents' dead) (Figure 7.1 and Table 7.4). The proportion of children under 18 years with both parents dead is highest in Kigoma Region (12.0%), followed by Tabora (4.8%) and the lowest is Arusha (2.0%). The region with the highest percentage of children under 18 years with at least one parent dead is Kigoma (18.8%) followed by Mara (12.6%). On the other hand, the region with the lowest percent of children under 18 years with at least one parent dead is Dodoma (8.4%) followed by Tanga (8.5%) (Map 7.1).

CHAPTER EIGHT

Education, Literacy and Numeracy

Key Points

- More than 82 percent (82.8%) of persons aged 15 years and above in Tanzania Mainland are literate.
- Numeracy rate among persons aged five years and above is 78.4 percent.
- Seventy nine percent of the primary school population aged 7-13 is attending school and 14.3 percent had never been to school.
- Net Enrolment Rate (NER) for primary schools is 78.6 percent.
- About seventy three percent (72.5%) of persons aged four years and above have attained primary education and 19.6 percent have completed ordinary level secondary school education.
- Five percent (5.3%) of the population has attained university education.

8.1 Introduction

Education is one of the most important factors in social and economic development of any society. This chapter presents the status of education, literacy and numeracy for the persons aged five years and above. It also provides information on school attendance and education attainment for the persons aged four years and above.

8.2 Literacy

Literacy is the ability to read and write with an understanding of a short simple sentence in any language. It excludes the ability to only write or sign one's own name or write memorised phrases. The literacy rate in 2022 PHC is measured for persons aged five years and above who could read and write in: Kiswahili only; English only; both Kiswahili and English or any other languages. No test was administered to verify those who were really literate.

Table 8.1 shows that out of 50.6 million persons aged five years and above, 39.9 million (78.8%) are literate. The literacy rate is higher among males (80.5%) than females (77.2%). The literacy rates are generally higher among young population compared with older population. The highest literacy rate of 88.7 percent is observed for age group 15-19 years

and the lowest rates of below 60 percent are observed among children in the age group of 5-9 years and for persons aged 70 years and above. These results indicate a positive impact of the universal primary education and increased enrolment in secondary education resulting from free education programme.

Literacy rate in urban areas is substantially higher (91.5%) than in rural areas (71.9%). Males are more likely to be literate than females in both rural and urban areas (Tables 8.2, 8.3 and Figure 8.1).

Figure 8. 1: Literacy Rate for Persons Aged Five Years and Above by Sex and Place of Residence; Tanzania Mainland, 2022 PHC

8.2.1 Literacy for Selected Age Groups

Results show that youth (using national and international definition) have literacy rates above 87 percent. The rate is highest (88.5%) among teenagers in the age group of 13-19 years. Literacy rates are higher in urban than in rural areas, and for most of the selected age groups, males are more literate than females in both rural and urban areas except for the teenagers where females are more literate than males. Literacy rate among population in primary school age is 78.0 percent and 89.1 percent among secondary school age. The literacy rate among primary and secondary population is higher among females than males in both rural and urban areas (Table 8.4).

8.2.2 Adult Literacy

Adult literacy rate for persons aged 15 years and above is 82.8 percent which is 1.4 percentage points above the Third Tanzania Five Years Development Plan target of 81.6 percent by 2025/2026. The literacy rate is higher among males (86.6%) than females (79.2%). Furthermore, results reveal that in urban areas the rate is higher (93.4%) than in rural areas (76.2%). Adult males are more literate than adult females in both rural and urban areas (Figure 8.2).

Figure 8. 2: Adult Literacy Rates by Sex and Place of Residence; Tanzania Mainland, 2022 PHC

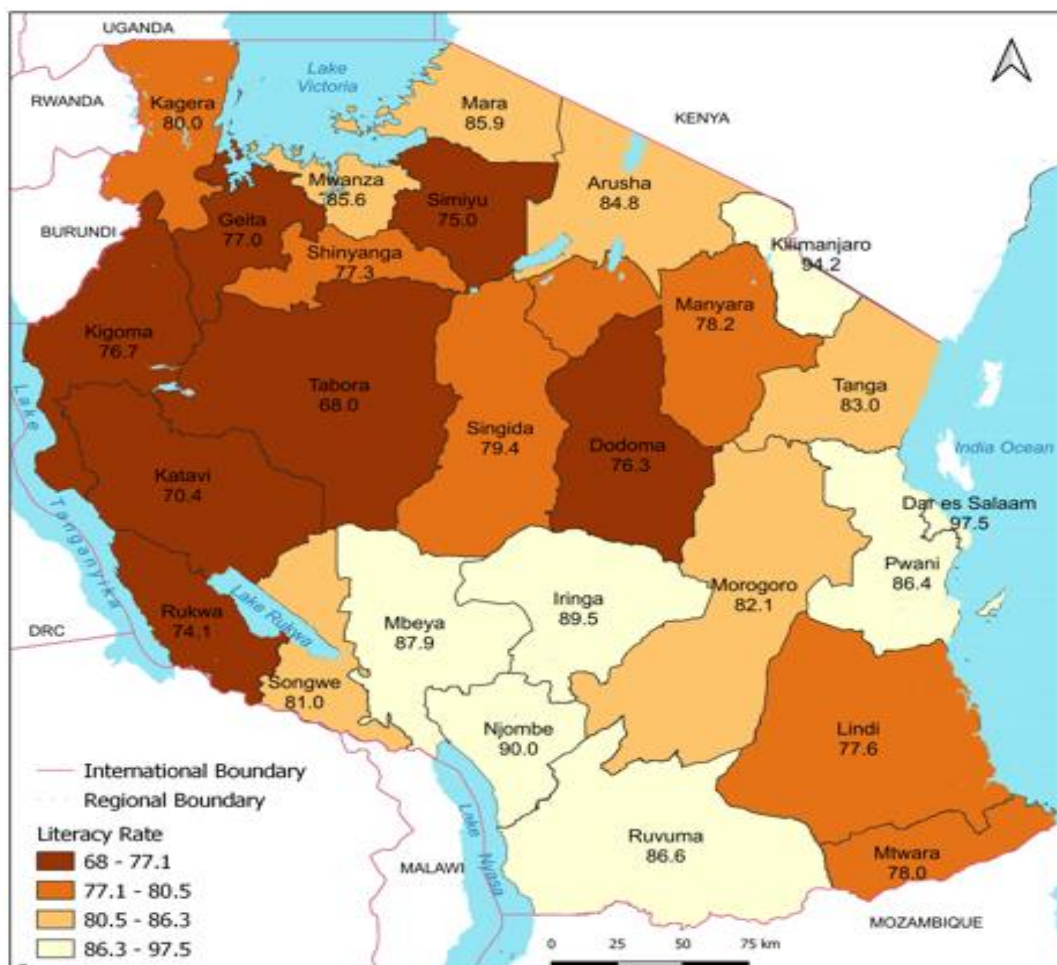

Literacy rates among adults increased from 77.9 percent in 2012 to 82.8 percent in 2022. Results also indicate that, the increase in adult literacy rate is more pronounced among females (6.1 percentage point difference) than males (3.4 percentage point difference) (Figure 8.3).

Figure 8. 3: Adult Literacy Rates by Sex; Tanzania Mainland, 2012 and 2022 PHCs

Adult literacy rates vary across regions ranging from 68.0 percent in Tabora to 97.5 percent in Dar es Salaam. Other regions with adult literacy rates above 90 percent or above are Kilimanjaro (94.2%) and Njombe (90.0%). Besides Tabora, other regions with relatively low adult literacy rates are Katavi (70.4%), Rukwa (74.1%) and Simiyu (75.0%) (Map 8.1).

Map 8.1: Adult Literacy Rates for Persons Aged 15 Years and Above by Region; Tanzania Mainland, 2022 PHC

Results reveal substantial increase in adult literacy rates between 2012 and 2022 censuses with an overall percentage point of 4.9. Across regions, the highest percentage change is in Pwani (12.8), followed by Lindi (9.6). The lowest percentage change of 0.7 is in Kigoma Region (Table 8.5).

8.2.3 Adult Literacy in Different Languages

The results in Table 8.6 and Figure 8.4 show that literacy rate is higher in Kiswahili only (61.2%), followed by literacy in both Kiswahili and English (20.5%) and is lower for other languages (0.4%).

Table 8. 6: Percentage Distribution of Adult Population Aged 15 Years and Above by Literacy Status and Five Year Age Groups; Tanzania Mainland, 2022 PHC

Figure 8. 4: Percentage Distribution of Adult Population Aged 15 Years and Above by Literacy Rate in Different Languages; Tanzania Mainland, 2022 PHC

In Tanzania Mainland results show that the percentage of persons who are literate in Kiswahili only is higher in rural (62.6%) than in urban areas (58.9%). On the other hand, the percentage of those who are literate in both Kiswahili and English is higher in urban (33.4%) than in rural areas (12.5%). In urban areas, females are more literate in Kiswahili only (60.3%) than males (57.3%) (Table 8.7, Figures 8.5 and 8.6).

8.3 Numeracy

Numeracy is the ability to access, use, interpret and communicate simple mathematical information and ideas, to engage in and manage mathematical demands for a range of situations in adult life. Basic numeracy skills consist of comprehending fundamental arithmetic operations such as addition, subtraction, multiplication and division.

Numeracy rate in this chapter is defined as the percentage of a population aged five years and above who can perform simple arithmetic calculations. No test was administered to verify those who were numerate. The question on numeracy was asked in private households only.

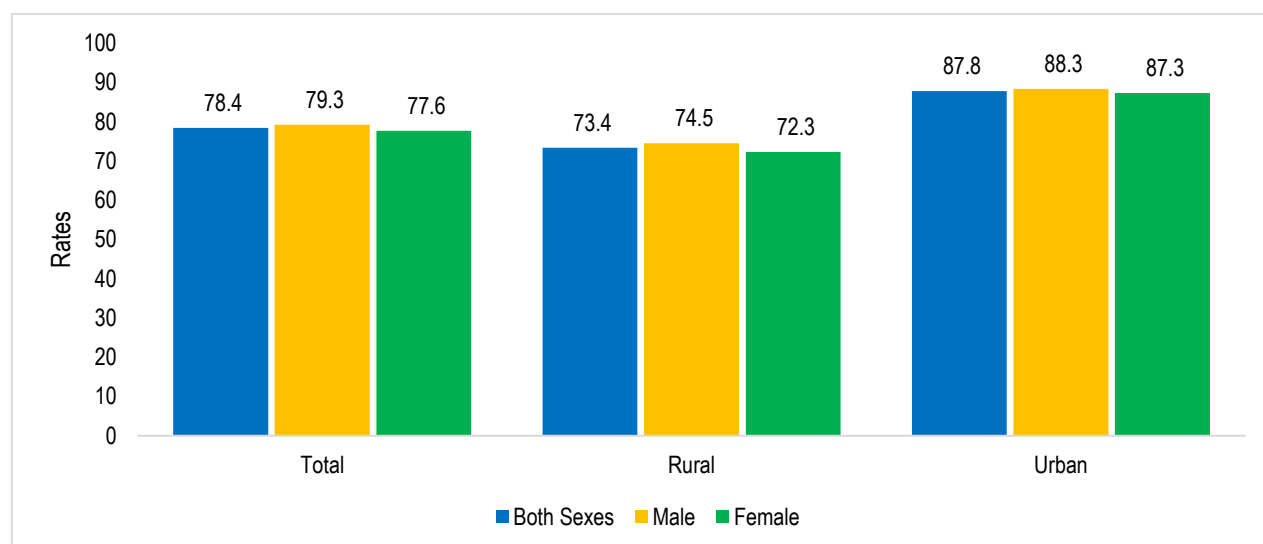

Out of 49.6 million persons aged 5 years and above, 38.9 million (78.4%) are numerate. The numeracy rate is higher among males (79.3%) than females (77.6%). Numeracy rates are also higher (more than 80.0%) for persons aged 10 to 59 years and relatively low for

young persons aged 5 -9 years and older ages 60 years and above. Numeracy rate in urban (87.8%) is higher than in rural areas (73.4%) (Table 8.9 and Figure 8.7).

Table 8. 9: Percentage Distribution of Population Aged Five Years and Above by Numeracy Rate, Sex, Place of Residence and Five-Year Age Groups; Tanzania Mainland, 2022 PHC

Figure 8. 7: Numeracy Rate for Persons Aged Five Years and Above by Sex, and Place of Residence; Tanzania Mainland, 2022 PHC

The results reveal that numeracy rate is highest (87.3%) among the for the secondary school age group of 14 – 17 years and lowest among those aged 60 years and above

(67.5%). Numeracy rate is high in urban than in rural areas in all selected age groups (Table 8.10).

**Table 8. 10: Numeracy Rate for Selected Age Groups by Place of Residence and Sex; Tanzania Mainland, 2022
PHC**

8.3.1 Adult Numeracy Rates

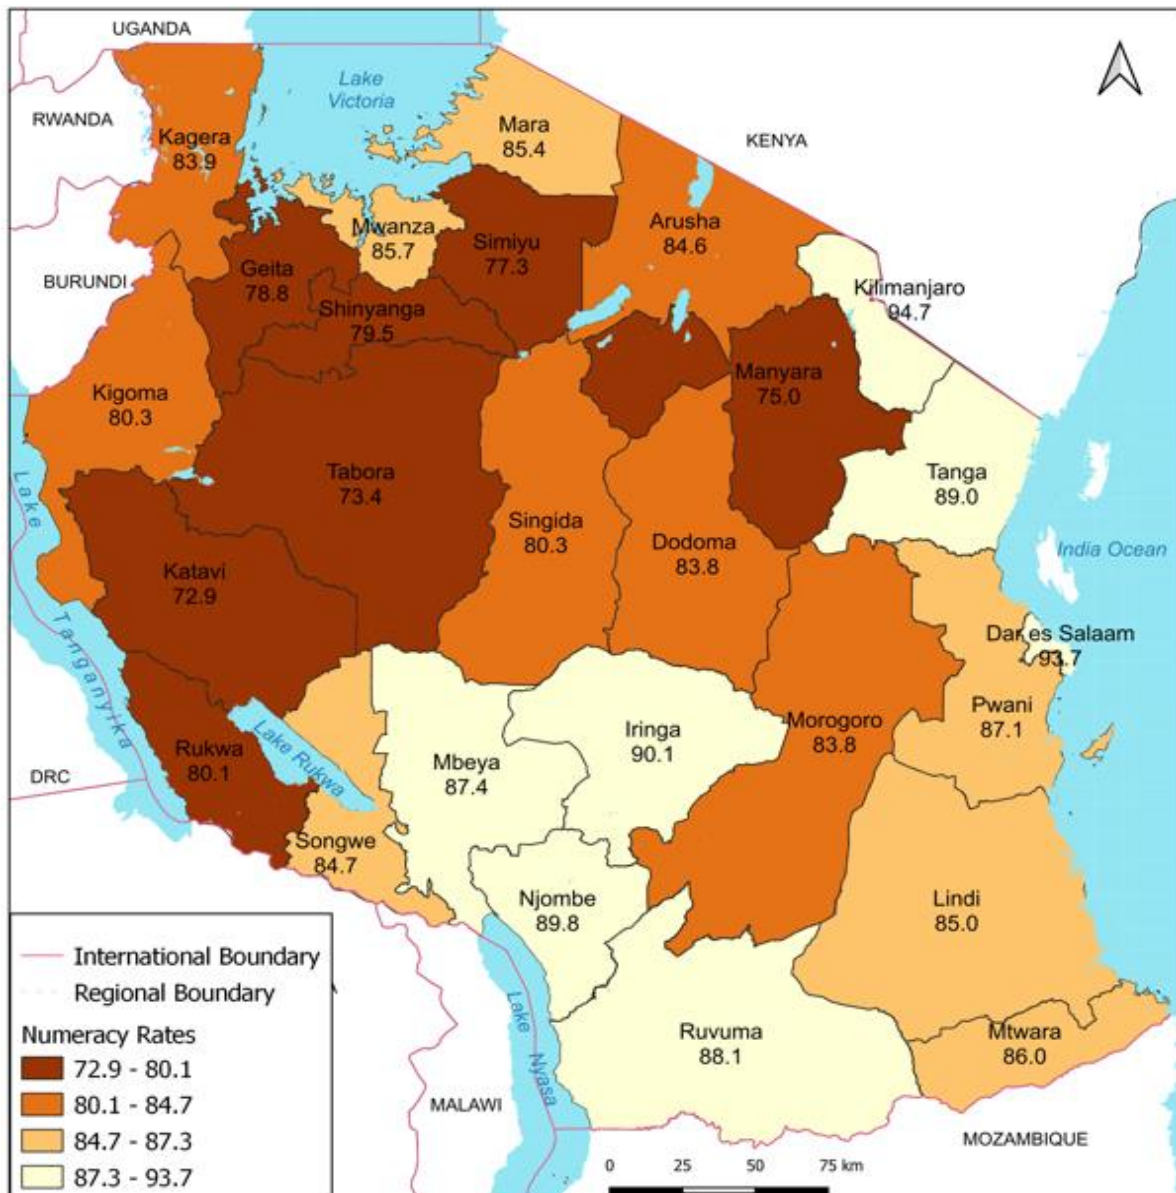

Numeracy rate for persons aged 15 years and above in Tanzania Mainland is 84.5 percent and is higher in urban (91.2%) than in rural areas (80.5%). The numeracy rate is higher for males than females across all regions. The rates range from 72.9 percent in Katavi to 93.7 in Dar es Salaam (Table 8.11 and Map 8.2).

Table 8. 11: Numeracy Rates for Adult Population Aged 15 Years and Above by Sex, Place of Residence and Region; Tanzania Mainland, 2022 PHC

Region	Population			Numerator			Numeracy Rates

8.4 Education

This section provides information on school attendance status, education attainment, net and gross school enrolment.

8.4.1 School Attendance Status

School attendance refers to attendance at any regular authorised or licensed educational institution or programme for organised learning at any level of education at the time of the census. Informal training in particular skills, which is not part of the recognised educational structure was not considered as school attendance.

Results show that, out of 52.5 million persons aged four years and above, 38.2 percent have completed school at different levels of education system, 31.2 percent are attending school, 10.4 percent have dropped out and 20.2 percent have never been to school. Percentage of females who have never been to school is higher (22.1%) compared with that of males (18.2%). Results further show that percentage of dropouts, is relatively higher (11.5%) among males than females (9.3%) (Figure 8.8).

Eighty three percent (82.9.0%) of the primary school population (age 7-13) are attending school and 13.5 percent had never been to school. Among secondary school population aged 14-17 years, 64.4 percent are attending, 9.1 percent had never been to school, while 15.3 percent had completed school. The rate of dropouts is higher among secondary school age population (11.3%) than primary school (3.0%) (Table 8.12).

The percentage of persons aged four years and above who had never been to school in rural areas is more than twice (26.1%) that of urban (9.2%). Likewise, dropouts are more common in rural (11.4%) than in urban areas (8.5%). However, the proportion of those who completed school at any level is higher in urban areas (49.1%) than in rural areas (32.4%). (Figure 8.9, Table 8.13 and 8.14).

Tabora Region has the highest percentage of persons who had never attended school (37.2%) and Dar es Salaam has the lowest (4.6%) (Figure 8.10). With regard to sex differentials, the percentage of females who had never attended schools is higher than that of males in all regions for both rural and urban areas.

Geita is the region with the highest dropout rate (14.3%) while Arusha has the lowest rate (6.5%) in Tanzania Mainland. Furthermore, results show that the percentage of dropouts is higher among males than females in all regions (Tables 8.15, 8.16 and 8.17).

Among persons aged four years and above who joined primary school education, 48.7 percent completed, 37.2 percent are still attending and 14.1 percent dropped out. Those who joined ordinary level secondary school education, 48.7 percent completed, 36.0 percent are still attending and 15.2 percent dropped out. Those who were admitted for university education, 71.6 percent completed, 27.3 percent are still attending and 1.0 percent dropped out. Drop out is minimal at the university level compared with other levels of education. The percentages of persons who completed primary, secondary education (ordinary and advanced level), training after primary and secondary are higher in urban areas compared with rural areas (Tables 8.18, 8.19 and 8.20).

8.4.2 Net and Gross School Enrolment

Net Enrolment Rate

Enrolment rates depict the proportions of children currently attending school which is important in assessing access to education among the population. In primary education, Net Enrolment Rate (NER) is defined as the number of children aged 7-13 years who are attending school divided by the total number of children in that age group. The 7-13 years age group is the official primary school age in Tanzania. On the other hand, Gross Enrolment Rate (GER) is defined as the number of children attending primary school regardless of age divided by the total number of children aged 7-13 years.

Results show that, the NER for primary schools is 82.9 percent. It is higher for females (85.0%) than males (80.7%) and it is higher in urban areas (93.6%) compared with rural areas (78.4%) (Table 8.21).

Table 8. 21: Net Enrolment Rates in Primary Schools by Place of Residence, Sex and Region; Tanzania Mainland, 2022 PHC

Songwe	81.0	78.5	83.5	76.6	73.6	79.7	93.9	93.6	94.3

NER in primary schools varies across regions ranging from 63.4 in Tabora to 96.8 percent in Dar es Salaam region. Fourteen regions have NER above the national average of 82.9 percent (Figure 8.11).

Figure 8.11: Net Enrolment Rates in Primary Schools by Region; Tanzania Mainland, 2022 PHC

Results show an improvement in net enrolment rates between 2002 and 2022 censuses. The overall NER in primary schools increased from 69.0 percent in 2002 to 82.9 percent in 2022 census. Improvement is more remarkable among females (from 69.8% to 85.0%) compared with males (from 68.3 to 80.7%) as shown in Figure 8.12. However, more effort is needed to meet the target of 100 percent for NER by 2025/26 as stipulated in the Third Tanzania Five Year Development Plan.

Figure 8. 12: Primary School Net Enrolment Rates by Sex; Tanzania Mainland, 2002, 2012 and 2022 PHCs

The rural NER in primary schools increased from 65.4 percent in 2002 to 78.4 percent in 2022 and the urban NER increased from 83.7 percent in 2002 to 93.6 percent in 2022 (Figure 8.13).

Figure 8. 13: Primary School Net Enrolment Rate by Place of Residence; Tanzania Mainland, 2002, 2012 and 2022 PHCs

Gross Enrolment Rate

The primary school Gross Enrolment Rate (GER) is 122.4 percent which is above the Third Tanzania Five Year Development Plan target of 100 percent by 2025/26. GER is higher in urban areas (144.2%) than in rural areas (113.4%). GER is higher for females (125.9%) than males (118.9%). A GER rate exceeding hundred percent could be due to over age and underage enrolment of children (Figure 8.14).

Figure 8. 14: Primary Schools Gross Enrolment Rate by Place of Residence and Sex; Tanzania Mainland, 2022 PHC

Results show GER increased from 94.2 percent in the 2012 to 122.4 percent in 2022. The difference is higher among females (from 95.1% to 125.9%) compared with males (from 93.3% to 118.9%) as shown in figure 8.15.

Figure 8. 15: Primary School Gross Enrolment Rates by Sex; Tanzania Mainland, 2012 and 2022 PHCs

8.4.3 Education Attainment

Education attainment is the highest level completed within the country's education system. Table 8.22 shows that, majority (72.5%) of population aged four years and above attained primary education and 19.6 percent completed ordinary level secondary school education. More females had attained primary education (73.4%) compared with males (71.6%). Results also show that 5.3 percent had attained university education.

CHAPTER NINE

Employment and Economic Activities

Key Points

- The overall unemployment rate is 7.4 percent. The rate is higher among as females (8.8%) than males (5.9%).
- The overall Labour Force Participation Rate (LFPR) is 77.6 percent.
- Agriculture, forestry and fishing industry has the highest proportion (62.6%) of the total employment in Tanzania Mainland.
- Agriculture sector contributes the largest share of employed persons (57.6%).
- There are 6.1 million persons aged 15 years and above engaged in informal non-agricultural economic activities, with more females (3.2 million) than males (2.9 million).

9.1 Introduction

This chapter presents findings on current economic activities for persons aged 15 years and above. In particular, it provides information on participation in economic activities, occupation, sector of employment and industry. Further, information on informal non-agricultural economic activities is also presented. Analysis in this chapter does not include institutional population.

Statistics on employment and economic activities are important inputs for planning labour related policies and programs to ascertain the size and structure of the working age population and its distribution by main occupation, industry and employment status. Such information from census is critical in setting the baseline data for making appropriate interventions to enhance labour force participation.

9.2 Current Economic Activity Status

Economic activity status refers broadly to economically active population which includes employed and unemployed populations. It also includes inactive population covering all persons who were without work during the reference period and were not available for work.

Table 9.1 indicates that, out of 33.4 million persons in Tanzania Mainland, aged 15 years and above, 24.0 million persons are in employment, 1.9 million are unemployed and 7.5 million are economically inactive.

Table 9. 1: Number of Persons Aged 15 Years and Above by Economic Activity Status (Relaxed International Definition of Employment) and Sex; Tanzania Mainland, 2022 PHC

Economic Activity Status	Both Sexes	Male	Female
Total	33,389,842	15,778,198	17,611,644
Employed	23,986,730	11,916,451	12,070,279
Unemployed	1,920,496	753,771	1,166,725
Inactive	7,482,616	3,107,976	4,374,640

Table 9.2 shows that there are more employed persons in rural areas (15,287,713) than in urban areas (8,699,017). Further, results show that there are more inactive persons in rural (4,873,412) than urban areas (2,609,204).

Table 9. 2: Number of Persons Aged 15 Years and Above by Economic Activity Status (Relaxed International Definition of Employment) and Place of Residence; Tanzania Mainland, 2022 PHC

Economic Activity Status	Rural	Urban	Total
Total	20,765,719	12,624,123	33,389,842
Employed	15,287,713	8,699,017	23,986,730
Unemployed	604,594	1,315,902	1,920,496
Inactive	4,873,412	2,609,204	7,482,616

Table 9.3 shows that out of the employed persons aged 15 years and above, majority of them are youth aged 15 – 35 followed by adult in the age category of 36-64. The distribution is similar for the unemployed and inactive population.

Table 9. 3: Number of Persons Aged 15 Years and Above by Economic Activity Status (Relaxed International Definition of Employment) and Selected Age Groups; Tanzania Mainland, 2022 PHC

Age Group	Economic Activity Status			Total
	Employed	Unemployed	Inactive	
Total	23,986,730	1,920,496	7,482,616	33,389,842
15-35	13,845,449	1,364,819	4,833,360	20,043,628
36-64	8,742,867	526,582	1,807,539	11,076,988
65 years and above	1,398,414	29,095	841,717	2,269,226

9.3 Current Unemployment

Unemployment is an indicator of labour underutilization, and it is measured as a percentage of the labour force that is currently unemployed. According to the relaxed international definition of unemployment, unemployed persons comprise those who in the last seven days prior to the census enumeration were not engaged in any economic activity but were available for work regardless of whether they took any effort to look for work. Unemployment rate in this chapter is based on this definition.

Figure 9.1 presents current unemployment rates in Tanzania Mainland based on the relaxed international definition of unemployment. It reveals that the overall unemployment rate in Tanzania Mainland is 7.4 percent, which is close with the target 8.0 percent as outlined in the Third Tanzania Five Year Development Plan 2025/26. Unemployment rate is higher among females (8.8%) than males (5.9%).

Figure 9. 1: Current Unemployment Rate of Persons Aged 15 Years and Above by Sex; Tanzania Mainland, 2022 PHC

9.4 Labour Force Participation Rate

The Labour Force Participation Rate (LFPR) provides an estimate of the size of the labour supply currently available for production of goods and services in a country. It is defined as the number of persons in the labour force as a percentage of the working age population. It provides important insight into various policy decisions to enhance performance of the labour market.

Figure 9.2 shows that, the overall Labour Force Participation Rate (LFPR) of Tanzania Mainland is 77.6 percent; the rate is higher for males (80.3%) than females (75.2 %).

Figure 9. 2: Labour Force Participation Rates for Persons Aged 15 Years and Above by Sex; Tanzania Mainland, 2022 PHC

9.5 Employment by Industry

Employment by industry provides information on relative importance of different economic activities in the labour market. The information is useful for identifying broad shifts in employment and stages of development. Classification of employment by industry in this report is based on the International Standard Industrial Classification of All Economic Activities (ISIC) Rev 4.

Results in Table 9.4 show that, agriculture, forestry and fishing industry have the highest proportion (62.6%) of the total employment in Tanzania Mainland followed by other service activities (8.4%). On the other hand, the industry of water supply, sewage waste management and remediation have the lowest proportion (0.1%) of the total employment.

Table 9. 4: Percentage Distribution of Employed Population Aged 15 Years or Above by Sex and Industry of Employment; Tanzania Mainland, 2022 PHC

Industry of Employment	Both Sexes	Male	Female
Total Number	23,986,730	11,916,451	12,070,279
Total Percent	100.0	100.0	100.0

Human health and social work activities	0.7	0.6	0.9
Arts entertainment and recreation	0.4	0.3	0.4
Other services activities	8.4	7.3	9.4

9.6 Occupation Status

This section highlights the distribution of employed persons aged 15 years and above by occupation and sex. This information provides critical insights into the economic, societal and individual aspects of the labour market. It also helps to make right decisions related to labour policies, education and skills training programmes and facilitate effective manpower planning.

Occupation is classified according to the Tanzania Standard Classification of Occupations (TASCO). Table 9.5 reveals that majority of employed persons (43.8%) are agricultural and

fishery workers followed by those in elementary occupation (21.5%), and craft and related workers (19.7%).

Table 9. 5: Percentage Distribution of Employed Population Aged 15 Years and Above by Sex and Occupation; Tanzania Mainland, 2022 PHC

Occupation	Both Sexes	Male	Female
Total Number	23,986,730	11,916,451	12,070,279
Total Percent	100.0	100.0	100.0
Legislators, administrators and managers	0.6	0.7	0.4
Professionals	2.1	2.3	1.9
Technicians and associate professionals	4.4	6.3	2.5
Clerks	0.5	0.5	0.5
Service workers and shop sales workers	6.3	5.1	7.5
Agricultural and fishery workers	43.8	42.1	45.5
Craft and related workers	19.7	20.4	19.1
Plant and machine operators and assemblers	1.2	2.0	0.3
Elementary occupations	21.5	20.7	22.3

9.7 Employment by Sector

This section presents distribution of employed persons aged 15 years and above by sex and sector of employment. This information is an important component for conducting macroeconomic analysis, policy formulation and effective labour interventions. Table 9.6 reveals that; agricultural sector constitutes the highest share of employed persons (57.6%) followed by private sector (23.0%) and household activities (12.2%).

Table 9. 6: Percentage Distribution of Employed Persons Aged 15 Years and Above by Sex and Sector; Tanzania Mainland, 2022 PHC

Sector	Both Sexes	Male	Female
Total Number	23,986,730	11,916,451	12,070,279
Total Percent	100.0	100.0	100.0
Public	7.1	8.1	6.2
Private	23.0	26.1	19.9
Agriculture	57.6	54.8	60.5
Household activities	12.2	11.0	13.4

9.8 Informal Non-Agricultural Economic Activities

The 2022 PHC refers informal non-agricultural economic activities as an activity that is unregulated and often without formal recorded business transactions. It normally occurs outside the framework of formal business regulations and system. It needs small capital and typically involves individuals such as street vendors and small-scale production activities without legal licenses or adhering to formal reporting and taxation requirements. Activities often operate within local communities to cater for immediate needs and therefore contributes to informal sector's overall economic performance.

Table 9.7 shows that, there are 6.1 million persons aged 15 years and above engaged in informal non-agricultural economic activities, with more females (3.2 million) than males (2.9 million). Moreover, results reveal that majority of persons engaged in informal sector are youth aged 15-35; accounting for 59.6 percent of total employment, followed by adult aged 36-64 with 36.1 percent. The lowest participation in the informal sector is observed for adults aged 65 years and above with 4.3 percent.

Table 9. 7: Percentage Distribution of Population Aged 15 Years and Above Engaged in Informal Non-Agricultural Economic Activities by Sex and Selected Age Groups; Tanzania Mainland, 2022 PHC

Sex	Age Group			Total Percent	Total Number
	15 - 35	36 - 64	65 +		
Both Sexes	59.6	36.1	4.3	100.0	6,109,865
Male	59.6	36.0	4.4	100.0	2,872,825
Female	59.5	36.2	4.3	100.0	3,237,040

CHAPTER TEN

Disability

Key Points

- There are 5.1 million persons in Tanzania Mainland, equivalent to 11.2 percent of the total population aged 7 years and above living with some form of disability.
- The prevalence of disability for persons aged 7 years and above has increased from 9.3 percent in 2012 to 11.2 percent in 2022.
- Most common type of disability is 'seeing' (3.0%) followed by 'walking' (1.9%).
- Most Persons with Disabilities (PWDs) (57.7%) reported disease as a major cause of their disability.
- The use of assistive devices among PWDs is very low.

10.1 Introduction

This chapter presents information on disability including prevalence of disability by sex and region, causes of disability and use of assistive devices. Disability is a broad term with various definitions depending on different aspects at international, regional and national levels. For instance; the Washington Group on disability statistics defines Persons with Disabilities (PWDs) as *“all those persons who are at greater risk than the general population in experiencing restrictions in completing specific tasks or activities due to limitations in their basic functioning such as walking, seeing, hearing or memory – even if such limitations are ameliorated by use of assistive devices, a supportive environment or plentiful resources”* (United Nations, 2001). The World Health Organisation explains that disability refers to an umbrella term covering impairments, activity limitations and participation.

At National level, the Tanzania National Policy on Disability of 2004 defines disability as a loss or limitation of opportunities to take part in the normal life in their community on an equal level with others due to physical, mental or social factors. All three definitions use the concept of activity limitation in defining disability rather than physical impairment.

Tanzania started collecting data on disability from the population census in 2002. PHC However, the definition of disability was based on impairment rather than activity limitation. The 2012 and 2022 PHCs used the broad definition of disability that is based on activity limitation rather than impairment to collect disability statistics. More specifically, the 2022

PHC defined Persons with Disabilities (PWDs) as all persons with physical, mental, intellectual or sensory impairment which may hinder or limit their full and effective participation in society on an equal footing with others.

The disability main domains included in the 2022 PHC were: visual, hearing, communication, mental, physical and self-care. The 2022 PHC also collected information on other disabilities, including: - albinism, cleft palate, hydrocephalus, spinal bifida, spinal cord injuries, epilepsy, psoriasis and storiiasis. Other types were autism, mental health, mental disorder, persons with short stature, leprosy and persons with hunchback. The following pictures illustrate some types of disabilities **Ethical clearance for using the pictures was obtained from relevant authority⁶**.

Albinism

Cleft Palate

Hydrocephalus

Spinal bifida

Spinal cord injuries

psoriasis

Storiiasis

Autism

Mental health

Persons with short stature

Leprosy

Persons with hunchback

⁶ Shirika la Vyama vya Watu wenye Ulemavu Tanzania - SHIVYAWATA

Disability statistics are important for promotion of evidence-based policy and programming decisions and effective monitoring. Moreover, disability statistics are essential for governments and stakeholders for enhancement of inclusiveness of PWDs in all aspects of life by removing the barriers faced by people with disabilities. Data on disability from the Census also provide a benchmark for collecting disability statistics from other household-based sample surveys.

Note that, population of persons with disability and total population used to compute disability prevalence does not include persons that were enumerated in institutions.

10.2 Prevalence of Disability

About 5.1 million persons in Tanzania Mainland, which is equivalent to 11.2 percent of the total population aged 7 years and above have some form of disability. There is a slight difference of disability prevalence rates in rural (11.5%) and urban areas (10.6%) (Table 10.1).

The most common forms of disability among the six major domains in Tanzania Mainland are seeing (3.0%) and walking (1.9%). The results further show that, among the major domains, self-care is the least common with less than one percent (0.3%) of the population aged 7 years and above reporting this difficulty. In addition, 3.7 percent of the population aged 7 years and above have other types of disabilities. For all types of disability, the proportion of people with disability is slightly higher for females than males (Table 10.1).

10.2.1 Prevalence of Disability by Region

The prevalence of disability varies across regions, ranging from 8.8 percent in Shinyanga to 15.3 percent in Kilimanjaro Region. Eleven regions have proportion of PWDs above the Tanzania Mainland average (11.2%) (Figure 10.1)

Table 10. 1: Disability Prevalence Among Persons Aged 7 Years and Above by Type of Disability, Place of Residence and Region; Tanzania Mainland, 2022 PHC

Figure 10. 1: Prevalence of Disabilities for Persons Aged 7 Years and Above by Region; Tanzania, 2022 PHC

10.2.2 Prevalence of Disability by Sex and Region

The results show that, the proportion of females with disabilities is slightly higher than males in most regions. Only four regions (Ruvuma (males 11.1%, females 10.8%), Rukwa (males 9.4%, females 9.2%), Kagera (males 12.9%, females 12.7%) and Manyara (males 9.9%, females 9.6%) have slightly higher proportions of males with disabilities than females (Table 10.2).

10.2.3 Prevalence of Disability in 2012 and 2022 Censuses

The prevalence of disabilities among population aged 7 years and above in Tanzania Mainland has slightly increased from 9.3 percent in 2012 to 11.2 percent in 2022. This is an increase of 1.9 percentage points in the last 10 years (Table 10.3). The increase in the proportion of PWDs may be explained by many factors including, increased general public awareness and improved social services among the group and the public at large, leading to parents and guardians stopping hiding PWDs.

Table 10. 3: Disability Prevalence Among Persons Aged 7 Years and Above by Region; Tanzania Mainland, 2012 and 2022 PHCs

10.2.4 Prevalence of Disabilities by Age and Sex

Results show that disability prevalence increases with age for males and females. The level of disability prevalence is about the same for females and males, increasing gradually from age group 4-9 to 40-44 then rising sharply to 50.6 percent for females and 48.8 percent for males aged 80 years and above (Figure 10.2).

Figure 10. 2: Prevalence of Disability by Age Groups and Sex; Tanzania Mainland, 2022 PHC

10.3 Prevalence of Persons with Albinism

Tanzania Mainland has a total of 71,631 persons with albinism, equivalent to 0.12 percent of the total population. Out of those, 41,203 persons (57.5%) are males and 30,428 persons (42.5%) are females. Over fifty percent (55.2 %) of people with albinism are living in rural areas. Regions with large number of persons with albinism are Dar es Salaam (11,966 persons), Morogoro (5,278 persons) and Mwanza (4,461 persons) (Table 10.4).

Albinism is “a born with” type of disability and therefore the number of persons with albinisms is expected to decrease as age increases which is in line with the general

population. Number of persons with albinism gradually decreases from 5,077 persons for those aged below 5 years to 803 for those aged 75-79 years (Table 10.5).

10.4 Population with Other Types of Disabilities

Results reveal that 1.7 million which is less than one percent of the total Tanzanian Mainland population has 'other' types of disabilities. Among these, spinal cord injuries (0.42%), is the most common, followed by cleft palate, hydrocephalus and mental health (0.31% each). The spinal cord injuries are higher in urban areas (0.45%) than in rural areas (0.41%) (Table 10.6).

10.5 Causes of Disabilities

There are different causes of disabilities within the population. Some persons are born with disabilities (congenital), or a disability may be a result of a disease, accident, physical violence, drug abuse or pregnancy complications.

The 2022 PHC results reveal that diseases are major causes for most types of disabilities. Almost 6 out of 10 PWDs (57.7%) reported disease as a cause of their disability while 18.6 percent of disability cases are congenital. Another notable cause of disabilities in Tanzania Mainland is accidents (7.0%).

Most of PWDs (61.0%) living in urban areas reported diseases as the major cause of their disabilities compared with 56.1 percent in rural areas. Reported causes of disabilities are almost the same among males and females. However, relatively large variations are observed with inborn, accidents and “other causes”. For example, nearly 10 percent (9.6%) of males with disabilities reported accidents as the main cause of disability compared with 5.0 percent for females (Tables 10.7).

Table 10. 7: Percentage Distribution of Persons with Disability by Cause of Disability, Place of Residence and Sex; Tanzania Mainland, 2022 PHC

Sex	Cause of Disability							
	Total	Inborn	Disease	Accident	Beaten	Drug abuse	Pregnancy	Others
Tanzania Mainland	100	18.6	57.7	7.0	0.7	0.2	0.6	15.2
Rural	100	19.4	56.1	6.9	0.7	0.1	0.5	16.2
Urban	100	16.9	61.0	7.3	0.7	0.2	0.8	13.1
Male	100	21.8	56.1	9.6	0.9	0.3	0.0	11.3
Female	100	15.9	59.0	5.0	0.6	0.1	1.1	18.4

Results further reveal that for all five major domains of disabilities, disease was mentioned as a major cause of disability for both males and females. The percentage of persons mentioning disease as a major cause of their disability is higher among females than males for all types of disabilities. However, the percentage of males mentioning accidents as their major cause of disability is almost twice compared to that of females for all types of disabilities (Table 10.8).

Table 10. 8: Percentage Distribution of Persons with Disability by Sex, Cause of Disability and Type of Disability; Tanzania Mainland, 2022 PHC

10.6 Use of Assistive Devices

Assistive devices help PWDs to perform their daily activities more effectively. Devices enable them to participate in social economic activities such as education, employment and hence improve their social-economic conditions.

Results reveal that, the use of assistive devices among PWDs is very low. Except for persons with albinism, of whom 17.2 percent are using assistive devices, for other type of disabilities the use is very low. For example, only 0.4 percent of persons with hearing disabilities are using assistive devices and 0.8 percent of persons with spinal bifida and communication disability are using assistive devices each. The percentage of persons using assistive devices in urban is relatively higher than in rural. However, the percentage of male using assistive devices in rural is relatively higher than female in almost all disability types (Table 10.9).

Table 10. 9: Percentage of Persons with Disability Using Assistive Devices by Sex and Type of Disability; Tanzania Mainland, 2022 PHC

CHAPTER ELEVEN

Land Ownership and Use

Key Points

- Almost one-third (33.0%) of population aged 15 years and above in Tanzania Mainland own land.
- About 11 percent (10.7%) of females in Tanzania Mainland own land alone compared with 18.1 percent of males.
- About half (47.2%) of persons aged 15 years and above owning land in rural areas do not have any legal document.
- Among the land owners with legal documents in Tanzania Mainland, 28.3 percent own land jointly.

11.1 Introduction

This chapter describes the status of land ownership which include information on persons owning land, type of ownership and possession of legal documents. Land ownership is a process of acquiring land tenure or right of occupancy from a relevant Government authority. The process provides the legal notes or documents to own or occupy the land. Land ownership in Tanzania can be categorized into three main tenure systems namely Customary Land Tenure, Right of Occupancy (ROO) and Government Land.

Respondents were asked about possession of any legal documents pertaining to land ownership. Legal documents for land ownership in this chapter comprise Certificate of Right of Occupancy (tittle deed), residential licence, letter of offer/acknowledgment of payment, customary ownership, contract, land registration card (Zanzibar), and official documents from Mtaa/Village/Shehia.

11.2 Land Ownership Status

Land ownership status is categorised based on the population in the private households owning land alone; jointly; both alone and jointly; or do not own land. In this report land ownership is irrespective of type of use. Results reveal that about one out of every three persons (33%) aged 15 years and above own land in Tanzania Mainland. Ownership of land is higher among rural population (38.8%) compared with the urban population (23.5%) (Table 11.1).

Land ownership by sex reveals that proportions of females (29.8%) owning land are lower than those of males (36.6%) throughout the country in both rural and urban areas.

Table 11. 1: Distribution of Persons Aged 15 Years and Above Owning Land by Place of Residence and Sex; Tanzania Mainland, 2022 PHC

Place of Residence	Sex	Land Ownership		Percentage of Persons Owning Land
		Total Population	Number of Individuals Owning Land	
Tanzania Mainland	Both Sexes	33,389,842	11,027,275	33.0
	Male	15,778,198	5,777,930	36.6
	Female	17,611,644	5,249,345	29.8
Rural	Both Sexes	20,765,719	8,064,325	38.8
	Male	9,892,223	4,180,389	42.3
	Female	10,873,496	3,883,936	35.7
Urban	Both Sexes	12,624,123	2,962,950	23.5
	Male	5,885,975	1,597,541	27.1
	Female	6,738,148	1,365,409	20.3

Table 11.2 and Figure 11.1 present land ownership status for persons aged 15 years and above by sex in Tanzania Mainland. It shows that 65.4 percent of persons do not own land followed by those owning land jointly (17.7%).

Moreover, the results reveal that out of those who own land alone, the proportion of males is higher (18.1%) than that of females (10.7%). Similarly, the proportion of persons owning land alone in rural areas is higher (15.1%) than those living in urban areas (12.7%).

Figure 11. 1: Percentage Distribution of Persons aged 15 Years and Above by Land Ownership Status, Place of Residence and Sex; Tanzania Mainland, 2022 PHC

Table 11.3 shows that a large proportion of people in Tanzania Mainland do not own land (65.4%) compared to those who own land (33.0%). Relatively high percentage of males own land (36.6%) compared with females (29.8%). Land ownership in rural areas (38.8%) is higher than in urban areas (23.5%). Regardless of residence (rural or urban areas), the proportion of both male and female of age group of 20 to 64 owning land is higher than other age groups (Table 11.3).

Out of persons aged 15 years and above who own land in Tanzania Mainland, 53.5 percent own jointly, followed by those who own land alone (43.0%). About 61 percent (60.6%) of females own land jointly compared with 47.1 percent of males. A similar pattern is observed in rural and urban areas. Moreover, out of those who own land alone, a higher proportion of persons are found in urban areas (54.0%) as compared with persons in rural areas (38.9%) (Table 11.4).

Figure 11.2 shows that a reasonable proportion of persons own land in Mtwara (47.0%), Ruvuma (45.3%), Njombe (45.1%) and Lindi (45.1%) regions. On the other hand, a small proportion of persons owning land are in Dar es Salaam (21.2%), Katavi (23.0%) and Mwanza (24.6%) regions. Persons residing in rural areas (38.3%) are more likely to own land compared to those in urban areas (23.1%).

Figure 11. 2: Percentage Distribution of Population Aged 15 Years and Above by Land Ownership Status, Place of Residence and Region; Tanzania Mainland, 2022 PHC

11.3 Possession of Legal Land Documents

Table 11.4 and Figure 11.3 indicates that 47.2 percent of persons aged 15 years and above in Tanzania Mainland own land without any legal document. Among the landowners with legal documents in Tanzania Mainland, majority of them own land jointly (28.3%) followed by those owning land alone (22.4%). Results further reveal that, possession of legal documents in Tanzania Mainland is in favour of females owning land jointly (32.4% females versus 18.0% males).

Table 11.4 and Figure 11.3 portray that about two third (59.6%) of persons owning land in rural areas do not have any legal documents compared with three quarters (75.0%) in urban areas. Among persons with legal documents in rural areas, 38.3 percent own land jointly, followed by those owning land alone (17.3%). In urban areas, among persons with legal documents, 37.3 percent own land alone followed by those owning land jointly (28.7%).

Results also show that possession of legal documents is higher among females in rural areas owning land jointly (32.4%) than males (24.5%). A similar pattern is found in the urban areas (31.5% females versus 24.8% males).

In Tanzania Mainland the region with the highest proportion of landowners with legal documents is Ruvuma (45.3%) followed by Njombe (45.1%). On the other hand, regions with the lowest proportion of landowners with title deeds are Dar es Salaam (21.2%) and Katavi (23.6%). Moreover, Rural areas have higher proportion of landowners with title deeds (38.8%) compared to people in urban areas (23.5%).

CHAPTER TWELVE

Housing Characteristics, Assets Ownership and Environmental Control

Key Points

- Six in ten (64.8%) households in Tanzania Mainland own houses they live in.
- About 70 percent (69.5%) of households use improved sources of drinking water.
- More than half (59.4%) of households use improved toilet facilities.
- Seventy-nine percent of households in rural areas and 20.1 percent in urban areas use firewood for cooking.
- The use of clean energy for cooking by households in Tanzania Mainland has increased from 2.5 percent in 2012 to 15.9 percent in 2022.
- Households using electricity for lighting from national grid increased from 20.7 percent in 2012 to 36.6 percent in 2022.
- Four in ten (40.5%) households in Tanzania Mainland use burning of solid waste as the main method of solid disposal.

12.1 Introduction

The 2022 PHC collected information on household ownership and characteristics as an indicator on household wealth information. This chapter presents information on tenure and ownership status of the household's main dwelling; legal right over the ownership of land where the main dwelling is built; building materials for the main dwelling and number of rooms available for sleeping. In addition, it also presents information on the main source of drinking water, sanitation, main source of energy used for cooking and lighting; environmental control methods used by households; ownership of assets and equipment. The questions on housing characteristics, assets ownership and environmental control was asked in private households only.

12.2 Housing Ownership and Tenure Status

Households were asked about the ownership of houses where they live and the availability of legal documents over the land where the house was built. Six in ten (64.8%) households in Tanzania Mainland own houses where they live followed by households renting houses privately (20.2%). The percentage of households living in their own houses is higher (75.8%) in rural than urban areas (47.9%). The percentage of male and female headed households owning houses is almost the same (64.9% and 64.7% respectively).

Across regions, Singida has the highest percentage (77.7%) of households living in their own houses while Dar es Salaam has the smallest percentage (40.4%) (Figure 12.1 and Table 12.1).

12.2.1 Legal Ownership of Land

About one-third (31.8%) of the households has no legal documents for the land where their houses are built while 11.6 percent have title deed. Most households have customary type of ownership (34.2%). Title deed documents are found more in households living in urban areas (27.7%) compared with rural areas (5.0%). The female-headed households with title deeds as legal right to the land of main dwelling is 12.4 percent, which is more than 11.2 percent for male-headed households. Percentage of households with title deeds ranges from 4.2 percent in Kagera Region to 38.9 percent in Dar es Salaam (Table 12.2).

12.3 Household Characteristics

Household characteristics describe the living conditions of households that are useful in guiding policy interventions. The living conditions include the type of building materials for roofing, walls and floor as well as number of rooms for sleeping.

12.3.1 Roofing Materials

In Tanzania Mainland, 85.4 percent of households are living in houses with improved roofing materials (iron sheet, tiles, concrete and asbestos). On the other hand, more than 70 percent of households in all regions are living in houses with improved roofing materials except for Tabora (65.7%) and Lindi (65.4%) (Figure 12.2).

Table 12.2 shows that most households in urban areas (96.2%) are living in houses roofed with iron sheets compared with 77.1 percent of households in rural areas. The percentage of households living in houses roofed by iron sheets ranges from 65.1 in Lindi to 96.5 in Dar es Salaam. Lindi Region has highest percentage of households living in houses roofed with grass or leaves (33.5%).

Figure 12. 2: Percentage Distribution of Households with Improved and Unimproved Roofing Materials; Tanzania Mainland, 2022 PHC

12.3.2 Floor Covering Materials

The percentage of households in Tanzania Mainland, living in houses with improved floor covering materials (cement, ceramic tiles, parquet or polished wood, terrazzo, vinyl or asphalt strips) is 56.3 while 43.7 percent live in houses with non-improved materials (wood planks, palm or bamboo, earth or sand, dung, containers or tents). Across regions, households with improved floor covering materials range from 27.1 percent in Kigoma to 97.5 in Dar es Salaam (Figure 12.3).

The results show that, 48.4 percent of households in Tanzania Mainland are living in dwellings with cement floors followed by earth or sand floor (42.2%). In urban areas, the most common floor covering materials used by households is cement (69.5%), followed by ceramic tiles (15.7%). In rural areas, the most common floor covering materials used is earth or sand (60.8%) followed by cement (34.7%). The use of cement as floor covering materials in the main dwelling ranges from 24.2 percent in Kigoma to 71.3 percent in Dar es Salaam (Table 12.4).

12.3.3 Wall Materials

Around one third (35.4%) of households have their house walls built of baked bricks followed by cement/rock bricks (26.8%) and sundried bricks (19.0%). In urban areas, more than five in ten households (55.3%) used cement bricks as wall materials, followed by baked bricks (28.9%). In rural areas the main wall materials used are baked bricks (39.6%) followed by sundried bricks (25.1%). Across region, only Dar es Salaam and Pwani regions have more than 50 percent of the households with houses built using cement/rock bricks walls materials (95.6% and 55.7% respectively) (Table 12.5).

12.3.4 Rooms for Sleeping

The number of people sleeping in a room is a major determinant of crowding and hence affects household members' health. A room for sleeping in the 2022 PHC is defined as any space within or outside the dwelling of the household which is currently used by household members for sleeping. This implies that any space within the dwelling can be termed as a room for sleeping if currently used by household members for sleeping purpose. By this definition any other space such as a sitting room, dining room or even stores were included if they were used for sleeping.

About three in ten (34.6%) households in Tanzania Mainland have one room for sleeping, 31.2 percent have two rooms and 21.8 percent have three rooms. On the other hand, 12.3 percent of households have more than three rooms for sleeping. There is negligible difference between male and female headed households in the average number of rooms for sleeping.

The proportion of households with only one room for sleeping is higher in urban (43.8%) than in rural areas (28.7%). Dar es Salaam region has the highest percentage of households (51.1%) with one room for sleeping compared with other regions. (Figure 12.4 and Table 12.6).

Figure 12. 4: Percentage Distribution of Households by Number of Rooms for Sleeping and Place of Residence; Tanzania Mainland, 2022 PHC

12.4 Water and Sanitation

Inadequate and inequitable access to water and sanitation services along with inappropriate hygiene practices at households, largely contributes to barriers that hinder efforts to support realisation of personal rights to live in a safe and clean environment.

12.4.1 Sources of Drinking Water

Sources of drinking water are categorised into improved and unimproved sources. Improved sources of water include piped water, tube well/borehole, protected dug well, protected spring, rainwater, bottled water, carts with small tank/drum and tanker truck. On the other hand, unimproved sources include unprotected dug well, unprotected spring and surface water.

Results show that 69.5 percent of households in Tanzania Mainland use improved sources of drinking water. Across regions in Tanzania Mainland, two regions namely Dar es Salaam (97.5%) and Kilimanjaro (92.8%) have high percentage of households using improved sources of drinking water while three regions are below 50 percent, namely Kagera (48.0%), Singida (47.2%) and Tabora (41.9%) (Figure 12.5).

Figure 12. 5: Percentage Distribution of Households Using Improved and Unimproved Sources of Drinking Water by Region; Tanzania Mainland, 2022 PHC

The use of improved sources of drinking water by households in Tanzania Mainland increased from 59.1 percent in 2012 to 69.5 percent in 2022. The increase in households using improved sources of drinking water is observed in all regions (Figure 12.6).

Figure 12. 6: Percentage Distribution of Households Using Improved Sources of Drinking Water by Region; Tanzania Mainland, 2012 and 2022 PHCs

Map 12.1 presents percentage of households using piped water as the main source of drinking water by region. Piped water is one of the improved water sources which include piped water into dwelling, piped water in the yard/plot, public tap/standpipe, neighbours tap or standpipe. Overall, half of households in Tanzania Mainland (50.2%) are using piped water their main source of drinking water.

Households living in urban areas are more likely to use piped water than those living in rural areas (71.5% versus 36.4%). Households in urban areas with piped water into their dwelling or yard is 46.6 percent, while 14.2 percent are getting water from a neighbours' piped supply and 10.7 percent from a public tap. In rural areas, 10.5 percent of households have piped water into their dwelling or yard, 5.0 percent get drinking water from a neighbours' piped supply and 20.9 percent from a public tap.

Percentage of households using piped water ranges from 18.3 percent in Geita Region to 86.6 in Kilimanjaro Region (Map 12.1 and Table 12.7).

Map12.1: Percentage Distribution of Households Using Piped Water as the Main Source of Drinking Water by Region; Tanzania Mainland, 2022 PHC

12.4.2 Sanitation Facilities

The 2022 PHC collected information on toilet facilities used by households. Toilet facilities are categorised into two groups; improved and unimproved. Improved facilities include flush or pour flush toilet that flushes the water and waste to a piped sewer system, septic tank, covered pit or unknown destination; Ventilated Improved Pit (VIP) latrine, pit latrine with washable slab and with lid, pit latrine with washable slab without lid and pit latrine without washable slab (soil slab); unimproved facilities include pit latrine without slab (open pit) and bucket.

More than half (59.4%) of households in Tanzania Mainland use improved toilet facilities. In rural areas 40.5 percent of household are using improved toilet facilities; this is below the Third Five Year Development Plan target of 75 percent of household by 2025/26. The most commonly toilet facilities used by households are pit latrines without slab (open pit) (34.6%). A higher proportion of households using pit latrines without slab/open pit are in rural (50.4 %) than in urban areas (10.2%).

The percentage of households without toilet facilities (open defecation) in Tanzania Mainland regions ranges from 0.2 percent in Dar es Salaam to 17.3 percent in Manyara. (Figure 12.7 and Table 12.8).

12.4.3 Trends on the Main Type of Toilet Facilities

The percentage of households with improved toilet facilities has significantly increased from 4.8 percent in 2002 to 32.8 percent in 2012 and 59.4 percent in 2022. On the other hand, the percentage of households with unimproved toilet facilities has significantly decreased from 86.6 percent in 2002 to 59.6 percent in 2012 and 35.1 percent in 2022. The percentage of households with no toilet facilities has slightly decreased from 8.6 percent in 2002 to 7.8 percent in 2012 and 5.5 percent in 2022 (Figure 12.8).

Dar es Salaam Region has maintained high percent of households with improved toilet facilities (89.2% in 2012 to 97.7% in 2022). On the other hand, Kagera Region has the lowest percentage (32.2%) of households with improved toilet facilities, followed by Simiyu (32.5%) and Singida (38.6%) regions. Regions with relatively many households with no toilet facility in the 2022 PHC are Manyara (17.3 %) and Mara Region (15.3%) (Table 12.9 and Figure 12.9).

12.5 Sources of Energy

The 2022 PHC collected information on households' main source of energy for lighting and cooking. The information collected enabled assessment of access to clean sources of energy (electricity, solar energy and gas). Use of clean energy as an alternative source of energy for cooking has two benefits; to reduce the heavy reliance on wood as the main source of fuel for cooking hence protecting the environment; and to improve the health of population especially women through reduced exposure to smoke from wood fuels.

12.5.1 Sources of Energy for Cooking

Table 12.10 shows that most of households in Tanzania Mainland use firewood (56.0%) as the main source of energy for cooking followed by charcoal (25.8%). Seventy-nine percent of households in rural areas and 20.1 percent in urban areas use firewood for cooking. Across regions, households using firewood for cooking ranges from 4.5 percent in Dar es Salaam to 77.4 percent in Simiyu.

With respect to charcoal, 12.5 percent of households in rural areas and 46.4 percent in urban areas use charcoal as the main source of energy for cooking. Overall, the percentage of households using charcoal for cooking in Tanzania Mainland is 25.8. Across regions, households using charcoal for cooking ranges from 9.4 percent in Arusha to 42.9 percent in Dar es Salaam.

Clean energy includes electricity, gas, biogas, solar, generator or private sources and wind generated electricity. Figure 12.10 indicates that the use of clean energy for cooking by households has increased in Tanzania Mainland from 2.5 percent in 2012 to 15.9 percent in 2022. At regional level, there is high increase of households using clean energy in Dar es Salaam (from 11.3 to 47.7 percent), Arusha (from 6.8 to 37.3 percent), Kilimanjaro (from 3.4 to 22.8 percent) and Mwanza (from 1.3 to 18.1 percent).

12.5.2 Sources of Energy for Lighting

The main source of energy for lighting in Tanzania Mainland is electricity from the national grid (TANESCO) used by 36.6 percent of household followed by solar energy (33.2%). Electricity is predominantly used in the urban households (68.8%) compared with the rural (15.7%). Use of electricity as the main source of energy for lighting ranges from 15.9 percent in Simiyu Region to 86.0 percent in Dar es Salaam.

Some of the regions with lower percentages of households using electricity as the main source for lighting have relatively high percentages of households using solar energy. These regions include Mtwara (55.2 percent) Ruvuma (49.8%) and Lindi (48.4%) (Figure 12.11 and Table 12.11).

Figure 12. 11: Percentage Distribution of Households Using Electricity and Solar as Main Sources of Energy for Lighting by Region; Tanzania Mainland, 2022 PHC

Figure 12.12 shows that, there is an increase in use of national grid electricity for lighting in Tanzania Mainland. Percentage of households using electricity from national grid for lighting

increased from 20.7 percent in 2012 to 36.6 percent in 2022. Similar increase is observed in all regions.

Figure 12. 12: Percentage Distribution of Households Using Electricity from National Grid for Lighting by Region; Tanzania Mainland, 2012 and 2022 PHCs

Table 12. 11: Percentage Distribution of Households by Main Source of Energy for Lighting, Place of Residence and Region; Tanzania Mainland, 2022 PHC

12.6 Household Environmental Control

12.6.1 Waste Disposal

Waste disposal is a collection, processing and recycling or decomposition of the waste materials generated by human beings. Waste materials are either in form of liquid or solid and effect of their components may be either hazardous or inert on health and environment. Improper disposal of waste is a burden to public health provision. This section discusses the major solid and electronics waste disposal means used by households.

Table 12.13 indicates that nearly four in ten (40.5%) households in Tanzania Mainland use burning of solid waste as the main method of solid disposal followed by regularly collection methods (21.4%). About 44 percent (44.3%) of households in urban areas use regular collection methods of solid disposal followed by burning (30.1%) and burying or pit (14.4%). In rural areas 47.2 percent of households use burning followed by burying or pit (25.1%) and throwing in the farm or use as manure (8.6%). More than 60 percent (65.4%) of households in Dar es Salaam Region are using regular collection methods.

Table 12. 12: Percentage Distribution of Households by Main Means of Solid Waste Disposal, Place of Residence and Region; Tanzania Mainland, 2022 PHC

12.6.2 Waste Collection Authorities

The results show that in Tanzania Mainland, Councils and private individuals are the major authorities that usually collect household waste (35.7% and 36.5% respectively). Out of the total households that reported household waste is collected, households in rural areas are more likely (79.2 percent in rural areas %) to use private individuals compared while 42.0 percent of households in urban areas use Councils as waste collectors while urban households are more likely to use Councils (42.0%) (Table 12.13 and Figure 12.13).

12.6.3 Electronic Waste Disposal

Electronic waste (e-waste) refers to electronic products that are unwanted, not working and nearing or at the end of their useful life. Electronic waste are products that have exhausted their utility value through either redundancy, replacement, or breakage and include goods such as computers, televisions, radios, cell phones, copiers, fax machines, refrigerators, washing machines and microwaves. The method through which households use to dispose of their electronic waste can pose a risk to public health.

Table 12.14 shows that, 59.6 percent of households in Tanzania Mainland mix electronic waste with other refuse. About seventy-two percent (71.6%) of households living in urban areas and 51.8 percent of those in rural areas mixes with other refuse.

All regions have more than 50 percent of their households mixing electronic waste with other refuse except for Manyara (43.4%), Kilimanjaro (41.1%) and Kagera (38.0%).

Table 12. 14: Percentage Distribution of Households by Methods of Disposing Electronic Waste by Place of Residence and Region; Tanzania Mainland, 2022 PHC

12.7. Ownership of Assets

Ownership of assets refers to possession of personal properties regardless of the purpose it serves. Any asset owned by any member of the household was treated as a household asset in the 2022 PHC. The assets asked under this section are in four groups: communication, transport, housing and agricultural equipment. However, the communication assets are discussed in chapter 13 of this report (Access and Use of Information and Communication Technology by Individuals and Households). The questions on ownership of specific assets aims at establishing non-monetary poverty indicators.

12.7.1 Transport Assets

Transport assets are motorised (motor vehicles, motorcycles or vespa and tri-motorcycles) and non-motorised (bicycles and tricycle) and draft animals (donkey or camel). In Tanzania Mainland, bicycle is the main transportation asset owned by households (21.1%) followed by motorcycles (7.9%) and motor vehicles (2.8%). The proportion of households owning bicycles is higher in male-headed households (24.6%) than female-headed households (14.6%). The proportion of bicycle owners is higher in households living in rural (25.1%) than in urban areas (14.8%). The proportion of households that own motor vehicles ranges from 0.9% in Lindi Region to 8.1% in Dar es Salaam (Table 12.15).

12.7.2 Housing and Cooking Assets

Housing and cooking assets include a house, electric or charcoal iron, electric or gas cooker and refrigerator or freezer. Results in Table 12.16 show that 64.3 percent of households in Tanzania Mainland own a house. The proportion of households owning houses is higher in rural (75.7%) than in urban areas (46.8%). The percentage of male headed households owning a house is slightly higher (65.4%) than female headed households (62.5%). Other assets owned by households are electric iron (14.0%), electric or gas cooker (13.2%) and refrigerator or freezer (8.0%). Households living in urban areas are more likely to own these assets than those living in rural areas.

12.7.3 Agricultural Assets

Agricultural assets include plough, power tiller, hand hoe, oxen, land or farm and tractor. About sixty-four (63.6%) percent of households in own land or farm. Ownership of land or farm is higher among households living in rural areas (75.4%) than in urban (45.4%). Half of the households own a hand hoe (55.4%). Households in rural areas are more likely to own hand hoe than in urban areas (68.0% versus 36.1%) (Table 12.17).

CHAPTER THIRTEEN

Access and Use of Information and Communication Technology by Individuals and Households

Key Points

- More than eight out of ten (82.3%) persons aged fifteen years or above in Tanzania Mainland own any mobile phone.
- More than eight out of ten households (85.0%) with at least one person aged 4 years or above in Tanzania Mainland owns a mobile phone.
- Eighty-six percent (86.2%) of persons aged 15 years or above in Tanzania Mainland use non-smartphones regardless of ownership status.
- Less than 3 out of 100 (2.6%) of all persons aged 15 years and above in Tanzania Mainland own laptops and 1.1 percent own desktop computers.
- The most common type of use of ICT equipment is communication (83.3%).
- Non-smartphone is mostly owned among individuals with training after secondary education (98.1%).
- Smartphone is mostly owned by individuals with university and other related education level (78.3%).
- Usage of mobile phones ranges from 90.4 percent among workers not classified by status to 95.6 percent among the self-employed without employees.

13.1 Introduction

Information and Communication Technology (ICT) is increasingly setting the pace of global socio-economic development. Countries are prioritising investment in the digital ecosystem to transform and modernise their economies in recognising ICT's developmental role in facilitating and accelerating overall development.

ICT statistics have been an agenda in the International statistical community for many years, and it has been receiving increasing attention due to its impact on the economy and society in general. The availability of ICT infrastructure and its use continues to grow. The Internet, in particular, is transforming society through the growing amount of information and many tools available. These advances and recognition that ICTs drive society and economic development have led to the need for reliable, comprehensive and comparable statistics to support Government decisions.

This chapter describes the status of individual and households' access and use of Information and Communication Technology (ICT), which includes ownership and use of ICT equipment in Tanzania Mainland. Although the information on ICT access and use by households and individuals was collected from all persons aged four years and above, for the purpose of this report, some indicators are analysed based on persons aged 15 years and above to facilitate national, regional and international comparisons of ICT Indicators. In addition, ICT indicators in this report comply with the International Telecommunication Union (ITU) Guidelines for Measuring ICT Access and Usage by Individuals and Households.

Information collected during 2022 PHC, includes access and usage of radios, televisions, computers, mobile phones, fixed-line telephones and internet facilities for all individuals aged 4 years and above. Access, usage and ownership of ICT equipment are key in linking communities, facilitating businesses and empowering communities socially and economically.

13.1 Households with Radio

The 2022 PHC results reveal that 38.6 percent of households in Tanzania Mainland have a radio. Higher proportion of households with radio are in urban areas (46.3%) compared with rural areas (33.6%). Dar es Salaam Region has the highest percentage of households with radio (52.2 %), followed by Njombe (49.7%) and Kilimanjaro (48.8%). Kigoma and Manyara have the smallest percentage of households with radio (28.8% and 29.1 % respectively). (Table 13.1)

13.2 Ownership of Television

According to the 2022 PHC results, 26.8 percent of the households in Tanzania Mainland owns a television. Analysis by the place of residence indicates that urban areas have a higher proportion (42.5%) of households with television sets than rural areas (16.6%).

Across regions, Dar es Salaam has the highest proportion of households owning television (51.8%), followed by Kilimanjaro and Iringa at 37.8 percent and 32.9 percent, respectively. On the other hand, Kigoma (15.1%), Manyara (17.9%) and Simiyu (17.9%) have the lowest (Table 13.1).

13.3 Households with Landline Telephone

According to the Tanzania Communications Regulatory Authority (TCRA) communication statistics report, landline telephone market is characterised by general stagnation, manifested by drastically decreasing subscriptions from 176,367 fixed telephone lines in 2012 to 85,976 in 2022.

The 2022 PHC results reveal that 1.1 percent of households in Tanzania Mainland have landline telephones. Households with landline telephone is proportionately higher in urban areas (1.2 %) than in rural areas (1.0%). Dar es Salaam Region has the highest percentage of households with landline telephone (1.7%), followed by Katavi Region (1.6%). Tanga Region, have the smallest percentage of households with landline telephones (0.6%) (Table 13.1).

13.4 Households with Internet Facility

The 2022 PHC results reveal that 0.6 percent of households in Tanzania Mainland have Internet⁸ facilities. Urban areas have higher proportion (1.2%) of households with Internet facilities than in rural areas (0.2%).

Dar es Salaam Region has the highest percentage of households with Internet facilities (2.0%), followed by Iringa (1.1%) and Arusha (0.9%). Lindi, Rukwa, Kigoma, Kagera and Katavi have the smallest percentage of households with Internet facilities (0.2% each) (Table 13.1).

⁸ 'Household with Internet access' means that the Internet is generally available for use by all members of the household at any time, regardless of whether it is actually used.

Table 13. 1: Number and Percentage Distribution of Households Owning Selected ICT Equipment by Place of Residence and Region; Tanzania Mainland, 2022 PHC

Place of Residence	Total Number of Households	Percentage of Households

13.5 Mobile Phones

13.5.1 Ownership of Mobile Phones by Individuals

An individual owns a mobile cellular telephone if he/she has a mobile phone device with at least one active SIM card for personal use. It includes those with a mobile phone for personal use that is not registered under his/her name but it excludes individuals with only active SIM cards (s) and not mobile phones.

Results reveal that more than three quarter (82.3%) of the population aged 15 years and above in Tanzania Mainland own mobile phones. Individuals in urban areas reported the highest mobile phone ownership at 89.6 percent compared with rural areas at 77.9 percent. Ownership of mobile phones is higher among males (87.3%) than females (77.9%)

Dar es Salaam Region have the highest (94%) percentage of population aged 15 years and above who own mobile phones while Rukwa Region has the least (72.1%). Across region the proportion of male's population owning mobile phones is higher than female's (Figure 13.1) and (Table 13.2).

13.5.2 Ownership of Mobile Phones by Households

Ownership by phone type indicates that in Tanzania Mainland, 85.0 percent of households with at least one member aged four years and above own any type of mobile phone. About percent 79.2 of households in Tanzania Mainland own a non-smart phone, and 25.8 percent of households own smartphones.

The results indicate that the proportion of households owning a mobile phone is higher (93.0%) in urban areas than in rural areas (79.8%). In urban areas, the proportion of households that own smart phone is 45.0 percent and 81.1 percent for non-smartphone is which is higher than in rural areas (13.3% and 77.9%, respectively).

Across all regions, the proportion of households with smartphones is less than 50 percent of all households except for Dar es Salaam (59.8%). Results also indicate that Rukwa has the smallest percentage of households that own smartphones (12.8%), followed by Simiyu (13.2%) and Mtwara (14.0%) (Table 13.3).

13.5.3 Ownership of Mobile Phones by Age Groups and Sex

Non-smartphone is the most widely owned phone type among persons aged four years and above, owned by 53.5% individuals (male (55.7%) and (51.5%) female). When the data is disaggregated by locality, almost half (48.6%) of individuals in the rural areas and 62.8 percent in urban areas own a non-smartphone. Ownership of smartphones among persons aged 4 years and above in Tanzania Mainland is 11.8 (13.0% male and 10.7% females); ownership of smartphones in urban areas (23.8%) is more than twice the number of individuals possessing smartphone in rural areas (5.4%) (Table 13.4).

Ownership of mobile phones (non-smartphone) is highest for individuals in the age group 45-49 and 55-59 years (90.8% for both) and for smartphone, ownership is highest for individuals in the age group 25-29 years (28.2%).

The results also show ownership of non-smartphone increases steadily from age group 5-9 years before peaking in the age group 55-59 thereafter declines steadily to 75.8 percent for persons age groups 80 + (Figure 13.2). and smartphone ownership increases steadily from age group 10-14 years before peaking in the age group 25- 29 thereafter declines steadily to 2,0 percent for persons age groups 80+ (Figure 13.2).

13.5.4 Ownership of Mobile Phones by Level of Education Attained

The 2022 PHC results reveal that in Tanzania mainland non smartphones are mostly owned by persons with training after secondary education 98.1 percent followed by person who attained training after primary education (97.0%) and the least owned by those who attained pre-primary level (72.7%). (Table 13.5).

The proportion of individual who own non-smartphone mobile are general higher among males than females across all education levels. The results also show that persons living in urban areas have higher percentage of using non-smartphone than those living in rural areas in all education levels.

13.5.5 Usage of Mobile Phones by Individuals

Results reveal that 86.2 percent of individuals aged 15 years and above in Tanzania Mainland are using non-smartphone and 18.6 percent are using smartphone. Proportion of persons using non smartphones in Urban areas (91.0%) higher than those in rural areas (83.3%), the data also revealed that Proportion of persons using smartphones in Urban areas (34.5%) is relative higher compared with rural areas (9.0%). Moreover, the proportion of individual who own smartphone and non-smartphone is higher -among males than females across all areas and regions (Table 13.7).

13.5.6 Usage of Mobile Phones by Type, Age Group and Sex

Type of mobile phone that was mostly used in the last three months before Census among persons aged four years and above in Tanzania Mainland is non-smartphone, used by (58.8%) individuals. Sex disparity in the use of non-smartphones is small, whereas (59.8%) for male and (57.8%) for female users. More than half (54.7%) of population in rural area use non-smartphone which is lower compared with (66.4%) of the population in urban areas. On the other hand, the percentage of population use smart phone in urban areas is higher (25.5%) compared to rural areas (5.9%) (Table 13.8).

Mobile phones (both smartphone and non-smart phone) are mostly used by individuals in the age group 45-49 years (93.6% for non-smartphone) and age group 25-29 (28.2% for smart phone) followed by individuals in the age group 50-54 years (93.4% for non-smartphone) and age group 30-34 (26.6% for smart phone). The use of smartphones increases steadily from age 5-9 before peaking at age group 25-29 (28.2 %), thereafter starting to decline to (2.0%) at age group 80+, while non smartphone increases steadily from age 5-9 before peaking at age 45-49 (93.6 %) thereafter declines to 79.4 percent for those aged 80+ (Figure 13.3).

13.5.7 Type of Use of ICT Equipment

The Census further sought to establish the use of ICT equipment (mobile phones and computers) for all persons aged 15 years and above. The results show that the most common type of use of ICT equipment is communication (83.3%) followed by sending and receiving money (53.2%), while the least is online businesses (4.2%).. In all types of uses, males have slightly higher percentages in usage than females (Table 13.9).

Results show that persons living in both rural and urban areas commonly use ICT equipment for communication (79.9 % for rural and 88.8% for urban), sending and receiving money (44.0% for rural and 68.3% for urban) and searching or receiving information (26.3% for rural and 49.1% for urban). However, the likelihood of use for any purpose is higher in urban areas than in rural areas. (Table 13.9).

13.5.8 Usage of Mobile phones by Highest Level of Education Attained

The 2022 PHC results reveal that in Tanzania Mainland non-smartphone is mostly used among individuals with training after secondary education level (98.5%) compared with other levels of education and the least used among those with pre-primary (79.3%). The percentage of usage of non-smartphone is higher among males across all level of Education compared with females. Usage of non-smartphone in Tanzania Mainland is higher in urban areas than in rural areas for all levels of education (Table 13.10).

Table 13. 10: Number and Percentage Distribution of Population Aged 15 Years and Above Using Non-Smartphone by Sex, Type, Place of Residence, and Education Level; Tanzania Mainland, 2022 PHC

13.5.9 Usage of Non-Smartphones by Employment Status and Sex

Results reveal that usage of non-smartphone ranges from 90.4 percent among workers not classified by status to 95.6 percent among the self-employed without employees. Regarding the usage of mobile phones across Employment Status categories by sex and place of residence, results show that usage of mobile phones by males is higher than females across all Employment Status categories. Furthermore, results show that mobile phones usage is higher in urban areas than in rural areas for all types of Employment Status. A similar pattern is observed in Tanzania Mainland (Table 13.12).

Table 13. 12: Number and Percentage Distribution of Population Aged 15 Years and above using Non-smartphones by Sex, Type, Place of Residence and Employment Status; Tanzania Mainland, 2022 PHC

13.6 Computers

13.6.1 Ownership of Computers by Individuals

Table 13.16 presents information on persons aged 15 years and above owning computer by type, sex, place of residence and region. The results show that 2.6 per cent of all persons aged 15 years and above in Tanzania Mainland own laptops and 1.1 per cent own desktop computers. Urban population are more likely to own both type of computers compared with rural population.

Dar es Salaam Region has the highest percentage of persons owning desktop computers (2.5%), followed by Arusha (1.7%) and Kilimanjaro (1.6%). The same three regions have the highest percentage of persons owning laptop computers (Dar es Salaam (7.3%), Arusha (4.2%) and Kilimanjaro (3.4))

13.6.2 Usage of Computers by Individuals

Usage of computers regardless of ownership reveals that Laptop is the most (4.2 %) used type of computer device among persons aged 15 years and above in Tanzania Mainland.. Generally, a slightly higher proportion of male is using computers compared with female regardless of place of residence and type of computer.

Usage of computers by individuals vary across Region, with Dar es Salaam Region having the largest percentage of individuals using computers (5.2% uses desktop and 10.6% uses laptop). Simiyu Region has the smallest percentage (1.2% desktop and 2.3% laptop respectively). The percentage of individuals who use desktop and/or laptop is higher for males than females across all Region (Table 13.17).

13.6.3 Usage of Computers by Age Group and Sex

Computer usage includes the use of all types of computers, namely desktop and laptops. Details on distribution of usage of computers during the 3-month period prior to the Census are given in Table 13.18. The table shows that 3.2 percent and 1.6 percent among individuals used laptops and desktops computers, respectively, during the reference period.

For urban population, 5.9 percent individuals reported having used a laptop computer within 3 months preceding the Census while for rural, 1.8 percent persons reported use of laptop computers within the same period. Number of individuals who used desktop computers in urban areas is higher (2.9 percent) than users in rural areas (1.0 percent). Number of users of both laptop and desktop computers is higher among male compared to female in all age group. The use of computers increases with age but peaks at 25-29 years then slowly decline (Table 13.18).

13.6.4 Usage of Computers by Highest Level of Education Attained and Sex

The 2022 PHC results reveal that, in Tanzania Mainland, desktop computer is mostly used among individuals with university and other related education levels (16.2%) compared to other levels of education and least used among those with pre-primary (1.2%). The percentage of usage of desktop computers is higher for males with all levels of education except for those with pre-primary which is the same for both male and female (1.2%) (Table 13.19).

Table 13. 19: Number and Percentage Distribution of Population Aged 15 Years and Above Who Used Desktop in the Last Three Month Prior to Census Date by Sex, Place of Residence and Education Level, Tanzania Mainland; 2022 PHC

The 2022 PHC results reveal that, in Tanzania Mainland laptop is mostly used among individuals with university and other related education level (33.5%) compared to other level of education and least used among those with primary school (1.9%). The percentage of usage of laptops is higher for males in all levels of education than in females and the same for both male and females with primary school.

Usage of laptop by sex and level of education attained in Tanzania Mainland is higher in urban than in rural areas for all education levels (Table 13.20).

13.6.5 Usage of Computers by Employment Status and Sex

Results reveal that the percentage of persons aged 15 years and above who used desktop computers in the last three months prior the census date in Tanzania Mainland ranges from 3.2 percent for self-employees with employees to 7.2 percent among self-employee without employee's categories. Regarding the usage of desktop computer across employment status categories, results shows that usage among males is slightly higher than females across all employment status categories. Furthermore, results show that desktop computers usage is higher in urban than in rural areas for all types of employment status categories.

In Tanzania Mainland, results reveal that self-employee without employees have the highest (7.2%) usage of desktop computers in the last three month prior to census date compared with other employment status categories. Results show that usage of desktop computers among males is higher than females across all employment status categories. The usage of desktop computers is higher in urban than rural areas (Table 13.21).

Results reveal that, the percentage of persons aged 15 years and above who used laptop computers in the three months prior the census' date in Tanzania Mainland ranges from 1.8 percent among the self-employee with employees to 4.0 percent among self-employee without employees. Regarding the usage of laptop computers across employment status categories, results show that usage of laptop by males is higher than females across all employment status categories. (Table 13.22)

13.6.6 Usage of Computers by Occupation

The 2022 PHC results reveal that, in Tanzania Mainland desktop computer is mostly used among professional's 38.4 percent followed by legislators, administrators and managers (34.8%), and least used among agricultural and fishery workers (2.4%). Usage of desktop computer is higher among males than females in all occupation categories except technicians and associate professionals. Usage is more dominated by those living in urban than rural areas. (Table 13.23).

Table 13. 23: Number and Percentage Distribution Persons Aged 15 Years and Above Who Used Desktop Computer in the Last Three Month Prior to the Census Date by Sex, Place of Residence and Occupation; Tanzania Mainland, 2022 PHC

CHAPTER FOURTEEN

Summary of Key Findings, Policy Implication and Recommendations

14.1 Introduction

This chapter presents key findings of the 2022 PHC results, their policy implications and recommendations with the aim of informing the government and stakeholders on the policy options to realise socio-economic development in the country.

The 2022 PHC provides baseline information on the Tanzania Mainland's population for policy formulation and review, development planning, informed decision making, monitoring and evaluation and reporting of development programmes at national, regional and international levels.

14.2 Key Findings

The key findings summarized here are on the selected areas of the Basic Demographic and Socio-economic Profile Report, considered to be of high priority for development policy and planning. Further details and specific results, relevant statistics and full references can be found in respective chapters of this report.

14.2.1 Population Size and Growth

Population of Tanzania Mainland is growing at a rate of 3.2 percent annually. The rate has remained high for the past 50 years increasing from 2.7 percent in 1967 to the present level of 3.2 percent which is above average African population growth rate (2.4 percent)⁹. As a result, the population of Tanzania Mainland has increased by more than five times from 12.3 million in 1967 to 59.9 million in 2022.

Policy Implications

- i. With the current annual growth rate, the population of Tanzania Mainland is expected to double in the next 22 years;
- ii. High population growth may lead to greater human capital, higher economic growth (labour force participation, lead to competitive businesses, increased per capita income and market shares, and poverty reduction) and higher economies of scale;

⁹ World-Population-Data-Sheet 2022

- iii. High population growth may lead to increased pressure on social and economic services, contribute to depletion of natural and environmental resources, causing widespread pollution, and health hazards; and
- iv. May also put pressure on land use, urban housing and other urban infrastructures as well as on education and health facilities. It may also worsen urban unemployment situation.

Recommendations

- i. Government to have broad views in designing population related policies, ranging from economic growth, human resource capabilities and environmental management;
- ii. The Government and stakeholders may need to sustain investment in social services as well as economic services to absorb the fast-growing population while advocating for planned and balanced approach to population growth, economic growth and development;
- iii. The Government need to consider scaling up land use planning, urban planning and investment in social and economic services;
- iv. The Government to put in place enforcement mechanism of National Environmental Policy (2022) and other sectoral policies on environment, to ensure that negative impacts caused by human activities are minimized; and
- v. The Government need to address issues of population growth by formulating broad based and inclusive development policies as stipulated in national medium to long term development frameworks as well as sectoral policies and strategies. These should target sectors with majority/high participation such as agriculture and entrepreneurship.

14.2.2 Young population and Age dependency ratio

- a) More than four out of ten (43%) of the Tanzania Mainland population is aged below 15 years;
- b) About half of total population (49.0 percent) is below 18 years of age;
- c) Tanzania Mainland population constitutes about six percent of persons aged 60 years and above; and
- d) Age dependency ratio of Tanzania Mainland is 87 dependants per 100 persons in working age group.

Policy Implications

- i. High proportion of under 18 years of age implies increased demand for education, healthcare and other social services leading to strain in resources and infrastructure. It may lead to higher unemployment rates (in future) which can contribute to social unrest and political instability. However, high under 18 years of age (young people) means a potential labour force who can actively contribute economic growth, especially when they are educated and skilled;
- ii. Increased number of elderly persons indicate an increased demand for social protection which includes universal pension, health insurance and housing;
- iii. High age dependency ratio in Tanzania Mainland is a result of high fertility rate and a small proportion of over 65 years of age; and
- iv. A high dependency ratio (under 15 and over 65 years) increase demand for social services and long-term care services; high burden of public finances to cover the associated cost of providing social services; and reduce productivity growth.

Recommendations

- i. The Government may consider reviewing its policies (Child Development Policy of 2008 and its associated legal frameworks) to accommodate findings of 2022 PHC, while ensuring allocation of enough resources to education, health, social security and protection as stipulated;
- ii. The Government may consider reviewing its instruments to reflect the finding of 2022 PHC which indicate the increase of the elderly population (60 years and above), to provide services to the elderly population as indicated in the Tanzania National Ageing Policy of 2003;
- iii. The Social Security Policy of 2003 need to be reviewed to take into account the role of non-contributory social protection mechanisms to cater for the need of elderly population; and
- iv. The Government and partners need to review and implement National Population Policy (2007) to strengthen implementation of family planning initiatives.

14.2.3 Marital Status and Early marriage

- a) About two percent (1.5%) of the population in Tanzania Mainland are married at a younger age (10 -14 years);
- b) Nearly one out of every twenty-five person (3.7%) aged 15 years and above are divorced; and
- c) One in every twenty persons (4.9%) aged 15 years and above are widowed.

Policy Implications

- i. Early marriage has potentially lifelong harmful consequences such as increased, early pregnancies, Child and Maternal health, and domestic violence. These are also denied education, economic opportunity and may experience psychological consequences;
- ii. The increase of divorce and widowhood may lead to change of family formation; unbalanced child upbringing and poor access to basic needs, including quality education, health and psychological wellbeing;
- iii. Divorce has the ability of diminishing a child's future competence in all areas of life (relations, education, and emotional wellbeing); and
- iv. Divorce and widowhood have economic implications such as decline in economic growth, incomes and poverty, leading to long term lower mobility rates between generations.

Recommendations

- i. The Government need to put in place favourable policies that reduce child marriage and work with stakeholders to implement programmes that focus on girl's education, economic incentives, and community mobilization;
- ii. The Government to enforce laws and regulations that prohibits the incidence of early marriage;
- iii. The Government, Faith Based Organizations and civil societies to provide public awareness and education regarding marital ethics, values and life;
- iv. Government and stakeholders have to enforce legal provisions that regulate sources of divorce and family breakups, such as infidelity, inheritance issues and property rights; and
- v. The Government and stakeholders need to strengthen guidance and counselling that may help to reduce conflicts in the family that may lead to separation and divorce.

14.2.4 Possession of National Identification Documents

- a) About 68 percent of Population had neither Birth Certificate nor Birth Notification;
- b) About 22 percent of persons aged 18 years and above have national identification cards (NIDA) and 13.7 percent have Identification number; and

- c) Seven percent (7.0%) of persons in Tanzania Mainland have health insurance from National Health Insurance Fund (NHIF) or Community Health Insurance Fund (CHIF).

Policy Implications

- i. National identification documents are important for citizens to access services and fulfil their rights and obligations. They also help in association of information in the national databases, national security issues and law enforcement. Moreover, birth certificate is mandatory for every citizen and therefore high proportion of persons without birth certificate is contrary to Births and Deaths Registration Act, (CAP 108, R.E 2002) that stipulates a birth is required to be registered within 90 days of the occurrence and Registration and Identification of Persons Act of 1986 (R.E 2012) which require to register and issue identity cards to all Tanzanian citizens, legal residents and bona fide refugees; and
- ii. Health Insurance is important for ensuring accessibility to quality health care services to all people. Health insurance guarantees a society that is healthy and productive to attain economic prosperity. Contrary to that the government will spend a more resources to cure its people.

Recommendations

- i. The Government may consider strengthening capacity of institutions responsible for vital events and issue corresponding documents as stipulated by laws;
- ii. The Government need to undertake deliberate efforts to ensure that all eligible persons (Age 18 years and above) have National Identification Card (NIDA Card); and
- iii. The Government to undertake the public awareness and education campaign on the newly enacted Universal Health Insurance Act of 2023 to promote access to health services through prepaid mechanisms.

14.2.5 Survival of Parents and Orphanhood

- i. Approximately eleven percent (10.5%) of children under age 18 years in Tanzania Mainland are orphans (7.1% one parent dead and 3.4 % both parents dead);
- ii. The proportion of orphans has increased from 7.7 percent in 2012 to 10.4 in 2022; and
- iii. There is significant regional variation of orphanhood ranging from 8.4 percent in Dodoma to 18.8 percent in Kigoma.

Policy Implications

- i. Orphan children are likely to become victims of violence, human trafficking, and exploitation, as well as likelihood to experience mental health challenges;
- ii. The increase of proportion of orphan children (7.7% in 2012 to 10.4% in 2022) may result to increase number of households headed by children that may increase child labour, child poverty, which characterize sufferings, disease, social abuse and lack of basic services; and
- iii. The orphanhood may lead to the increase burden to family, household and governments in term of costs of care.

Recommendations

- i The Government and stakeholders need to put in place/strengthen measures to address the plight of orphan children;
- ii The Government and respective authorities may consider strengthening the role of oversight institutions to ensure that the private orphanage centres are also run in accordance with stipulated laws, regulations and guidelines; and
- iii Government and stakeholders to continue to mobilise and allocate adequate resources to support plans and strategies regarding to orphanage services including education subsidies and running cost of care in centres.

14.2.6 Literacy and Education

- (a) About 83 percent (82.8%) of population aged 15 years and above is literate. Literacy rate ranges from 68.0 percent in Tabora to 97.5 in Dar es Salaam;
- (b) Net Enrolment Rate in primary school is 82.9 percent with notable disparity among regions, ranging from 63.4 percent in Tabora to 96.8 in Dar es Salaam;
- (c) Net Enrolment Rate in primary school in Tanzania Mainland has increased from 76.6 percent in 2012 to 82.9 percent in 2022; and
- (d) Primary education Gross Enrolment Ratio is 122.4 percent.

Policy Implications

- i. Disparity in education (literacy and enrolment) may lead to slow achievement in National development targets and a course of disharmony in the society;
- ii. The NER for Tanzania Mainland indicates that a large proportion of children of official primary school age are enrolled in primary education, which signifies that there is

- higher access to primary education in Tanzania Mainland, which also translate into better education outcomes for Mainland Tanzania's children and in a long-term resulting to reduction in poverty and inequality;
- iii. Increased rate of net enrolment in primary schools may imply to the government resources required to finance education resulting from increased capitation grant, facilities and human resources in education sector; and
 - iv. Increase of Gross Enrolment Ratio from 94.6 percent in 2012 to 113.2 percent in 2022 implies that Tanzania Mainland is able to accommodate most of its school age population in its education system. However, it also implies that the challenges of reaching national target of 100 percent GER as stipulated in the Five Year Development Plan (FYDP) still exists. These challenges are likely to be over and under age school registration.

Recommendations

- i. The Government to sustain efforts in education achievements in order to achieve national targets on education and address disparities among regions;
- ii. Government may consider increasing effort on implementation of education policy priorities including the free education policy and improve education system in order to achieve national, regional and global goals including the SDG goal 4 and 5, Education 2030 agenda and Continental Education Strategy for Africa (CESA); and
- iii. The Government to guarantee effective financing and implementation of provision of skills training and investing in Vocational and Technical Training as emphasised in the National Education Policy (2023).

14.2.7 Employment and Economic Activities

- a) The overall unemployment rate in Tanzania Mainland is 7.8 percent;
- b) The overall Labour Force Participation Rate (LFPR) of Tanzania Mainland is 77.6 percent;
- c) About 60 percent (59.9%) of youth population aged 15 – 35 in Tanzania are engaged in informal non-agricultural economic activities.

Policy Implications

- i. Unemployment rates can lead to a reduction in economic growth, as unemployed individuals have less disposable income to spend on goods and services, which can lead to a decrease in demand for goods and services. The 7.8 percent

unemployment for Tanzania is considered moderate, indicate that its impact on economic growth is also moderate. However, unemployment rates also imply possibility of social vices such as increase in crime, and social unrest;

- ii. Unemployment rates can also have a significant impact on individuals and families such as financial hardship, social isolation, and a loss of self-esteem. They may also experience negative health outcomes, such as depression, anxiety, and stress; and
- iii. Labour force Participation rate measures the amount of labour available in production of goods and services in the economy. The 78 percent participation rate for Tanzania is on the higher side which implies increased aggregate disposable income and consumer spending resulting from relatively high economic growth over the past ten (10) years; and
- iv. Informal sector is a significant youth employing sector in Tanzania. The sector generates income for youth leading to poverty reduction. It also leads to local community development. However, if measures are not taken to improve working environment for the sector it can become insecure and poor social protection.

Recommendations

- i. The Government need to sustain implementation of demand-side policies to reduce demand-deficient unemployment, such as monetary policy and fiscal policy, or supply-side policies to reduce structural unemployment, such as education and training programs to help individuals acquire new skills and find new jobs;
- ii. Government in collaboration with other stakeholders may consider developing programs for the youth on prevention, care, support and implement the rights of youth (education, equality, to live anywhere, employment, wages and the right to privacy and security). Moreover, guidelines that facilitate proper youth upbringing and development of youth talents should be used together with promotion of equitable access to resource allocations;
- iii. The Government to promote entrepreneurship and self-employment, by putting in place policies that enhance access to education and vocational training, addressing gender-specific barriers specifically targeting the unique challenges faced by women, youth and men; and
- iv. Government to continue fostering a conducive business environment by streamlining bureaucratic procedures, reducing taxes and regulations, and providing access to affordable credit. This would encourage private sector growth, job creation, and ultimately reduce unemployment rates among youth and women.

14.2.8 People with Disability

- a) About 11 percent (11.2%) of the total Tanzania Mainland population aged 7 years and above have some form of disability;
- b) Most person with disabilities (57.6%) reported diseases as major cause; and
- c) Seven percent of PWDs, their disability was caused by accident.

Policy Implications

- i An increase proportion of People with Disabilities (PWDs) in the country signals the Government to spend more resources to make sure their welfare is taken into account, given the fact that, PWDs are among the most vulnerable groups in society;
- ii High proportion of People with Disabilities implies additional costs of care for the household and the society at large;
- iii People with Disabilities are more likely to experience adverse social economic outcome such as health care and poverty due to barriers to education, employment, earning and weak social protection mechanism; and
- iv Poor PWDs are caught in vicious cycle of poverty and disability, each being cause and consequence of the other.

Recommendations

- i. The Government need to ensure that all policies and programs in the country integrate issues of PWDs so that they can fully participate in their own development using the resources available in the country;
- ii. Government and stakeholders to continue strengthening health and nutrition programs for prevention and cure so as to reduce the incidence of diseases leading to reduction of PWDs in the country; and
- iii. Government organs responsible with safety issues including road and occupational places should strive to enforce laws and regulations.

14.2.9 Drinking water

- a) About 70 percent of private households in Tanzania Mainland use drinking water from improved sources, with regional disparities ranging from 41.9 percent in Tabora to 97.5 percent in Dar es Salaam;
- b) Ninety-one percent (91.0%) of private households in urban Tanzania Mainland use drinking water from improved sources; and

- c) More than half (56.1%) of private households in rural Tanzania Mainland use drinking water from improved sources

Policy Implications

The use of water from unimproved sources has implication on human health as these sources are easily contaminated leading to poor health outcomes. Given the high rates of households using improved sources generally and in both urban and rural households in Tanzania, there is low likelihood of poor health outcomes emanating from water usage. This may also imply, in longer terms, good ecosystem leading to economic growth and development.

Recommendations

- i. The Government needs to sustain efforts to supply water from improved sources; and
- ii. Government to allocate enough resources to rural areas and regions that are lagging behind in the use of improved source of drinking water.

14.2.10. Sanitation

- i. About 60 percent (59.4%) of households in Tanzania Mainland use improved toilet facility; with significant disparities between regions, ranging from 32.2 percent in Kagera Region to 97.7 percent in Dar es Salaam; and
- ii. About six percent (5.5%) of households in Tanzania Mainland have no toilet facilities with notable disparity between regions ranging from less than one percent in Dar es Salaam to 17.3 percent in Manyara Region.

Policy Implications

- i. Use of unimproved or none use of toilet facilities contributes to the spread of infectious diseases such as cholera, diarrhoea, dysentery, hepatitis A, typhoid, and polio. These diseases can lead to serious illness and even death; and
- ii. Unsafe sanitation practices can contaminate water sources, soil, and ecosystems. This pollution affects not only human health but also the environmental natural resources.

Recommendations

The Government need to strengthen policies and laws to enforce sanitation and hygiene measures to avoid adverse effect of poor sanitation;

14.2.11 Energy

- a) More than half of households (56.0%) in Mainland Tanzania Mainland use firewood as the main source of energy for cooking followed by charcoal (25.8%);
- b) About 16 percent of households in Mainland Tanzania use clean energy for cooking, with notable disparities between regions, ranging from 5.7 percent in Rukwa to 47.7 percent in Dar es Salaam;
- c) Thirty seven percent (37%) of households use electricity from National Grid for lighting, with notable disparity between regions ranging from 15.9 percent in Simiyu to 86.0 percent in Dar es Salaam; and
- d) Almost one third (32%) of households in Tanzania Mainland use solar energy for lighting.

Policy Implications

Continued use of firewood and charcoal will lead to detrimental impact on environment by perpetuating deforestation, land degradation, soil erosion, air pollution, and loss of forest resources and therefore contributing to climate change. Results for use of clean energy signals the potential (though low) for addressing environment and natural resources. The results for Tanzania Mainland generally indicate that there is a need for Government and other stakeholders to put strategic actions towards environmental conservation.

Recommendations

- i. The Government in collaboration with stakeholders need to continue with efforts to improve policies and plans to promote alternative energy sources;
- ii. Government to continue to motivate population on the importance of using clean energy and educate public about the negative effects of unclean energy including respiratory system diseases and deforestation which is main sources of climate change; and
- iii. Government in collaboration with the private sector and other stakeholders to continue to provide awareness to population on the efficient use of energy and installation of clean energy at lower price.

14.2.12 Information and Communication Technology (ICT) Access and Use by Individual and Households

- a) Eighty five percent of households (85.0%) in Tanzania have at least one member who owns a mobile phone

- b) Eighteen percent (18.0%) of persons aged 15 years and above own smartphones or tablets.
- c) Twenty percent (20.3%) of males own smartphones or tablets compared to females with 16.0 percent.
- d) About 34 percent (33.6%) of persons aged 15 years and above living in urban areas own smartphones or tablets while in rural areas the respective figure is 8.6 percent.
- e) The ownership of computers (3.7%) is lower than that of smartphones or tablets (18.0%).
- f) Thirty nine percent (38.6%) of households in Tanzania own radio while 26.8 percent own Television.

Policy Implications

- i. The level of adoption of ICT services among households and individuals shows that the sector is growing in the right direction. Despite this growth, evidence from other sources (administrative data) shows that the digital divide gap is still high. For instance, though the broadband population coverage was 72 percent in 2022, only around 45 percent of the population used broadband services;
- ii. Ownership and usage of ICT smart devices (smartphones, tablets and computer) are low, which contribute to low speed of broadband services uptake; and
- iii. Access and use of ICT services are low among females compared to males as well as between urban and rural areas.

Recommendations

- i To bridge the digital divide gap, the Government needs to improve the availability of low-priced smart devices by reducing taxes and introducing digital literacy programmes in the education curriculum;
- ii The Government and private companies continue promoting usage of ICT smart devices through digital literacy, affordability of services, availability of online content and incentive packages;
- iii The Government strengthen access and skills in digital technology and establish financing schemes to address the low access to and use of ICT services among women and marginalized groups (persons with disability, youth, children, elderly and people living in remote areas); and

- iv The Government to consider conducting a stand-alone ICT household survey in order to capture ICT indicators such as expenditure on ICT, purchases online and digital literacy level which were not covered in the 2022 PHC.

Annexes

Table A2. 1: Total Population by Place of Residence, Sex and Region; Tanzania Mainland, 2022 PHC
